RE: CSX Transportation, Inc Barboursville Bridge Shop, Barboursville, WV
Permit Number R13-1751 Permit Determination Request Update

Dear Mr. Rothwell:

On June 15, 2016, West Virginia Division of Air Quality issued a permit determination (Determination No. PD16-037) stating that a permit was not required for the replacement of one existing metal roll down door on the abrasive blasting booth with Geoscreen material since this replacement would not result in an increase in potential emissions. CSXT recently learned that the facility will need to replace a second metal roll down door, since the abrasive blast booth is a two door system where the railcar can enter and exit the booth. Therefore, CSXT is requesting a permit determination for replacing the two metal roll down doors on the abrasive blasting booth with the Geoscreen material.

In the permit application (May 1994), the maximum particulate emissions were calculated assuming that the Geoscreen material was installed on 100% of the building's surface, controlling particulate matter emissions by 95%. Since the replacement of the metal roll down doors with the GeoScreen material will not result in an emissions increase it is therefore exempt from obtaining a permit to modify according to Code of State Rules (CSR) Title 45 Series 13-5.1.f. CSXT would like to initiate replacement of the metal roll down doors as soon as we receive confirmation from WVDEP that a permit amendment or modification is not required.

If you have any questions concerning the requested permit determination, please contact me at (904) 359-4833 or meaghan_atkinson@csx.com.

Sincerely,

Meaghan E. Atkinson
Manager, Environmental Programs and Sustainability
