Re: Permit Applicability Determination
Dominion Transmission, Inc.
Determination No. PD15-105
Plant ID No. 103-00009

Dear Mr. Sheppard:

It has been determined that your permit determination request submitted on December 14, 2015, for the replacement of Tank V-3050 at the Hasting Slug Catcher Area lacks enough information to make a decision. The DAQ agrees with the assessment regarding the applicability of this vessel towards Subpart Kb and OOOO to Part 60, which is based on the vessel meeting the pressurized vessel exclusion of §60.110b(d)(2) and does not meet the definition of storage vessel under §60.5430 due to the operating pressure. However, there are several areas that need additional information to make a decision with regarding your proposed replacement of Tank V-3050. These areas are the applicability of Subpart KKK to Part 60, pneumatic controller, and applicability of 45 CSR 14 (Prevention of Signification Deterioration).

The determination is lacking in depiction of the operation of the vessel with respect to how the liquid level will be controlled (i.e. pneumatic controller) and if any emissions associated with the controller would need to be quantified. The determination needs to provide enough information to make an applicability determination with respect to Subpart KKK of Part 60. A evaluation of this proposed project with respect to the emission units that would handle or process the drip gasoline or refined products from the drip gasoline and the associated emissions to determine if a significant increase of emissions under 45 CSR 14 is also required.

Response to Mr. Sheppard's Determination Request
