**RE: Class One Administrative Update for the Corrections in Permit R13-2381G - Washington Works.**

Dear Mr. Durham:

During a recent permitting activity DuPont changed some permitting references associated with permit changes in the 45 CSR 13 program issued R13-2381 permit. The permitting references involved specific citations that were related to the elimination of the 45 CSR 21 and 45 CSR 27 consent orders and were part of a cleanup of the DuPont 45 CSR 13 permits prior to anticipated business actions occurring in 2015.

In the course of these actions a citation reference was improperly made for condition 5.1.3 of 45 CSR 13 Permit R13-2381G. The permit reference was listed as R13-3223 when the reference should have been R13-2617. In addition, to correctly cross reference the permit, the text of condition 5.4.4 should be amended to read as follows:

5.4.4 To demonstrate compliance with the emission limits associated with the "Research Lab Hoods", identified in Section 5.1.2 of this permit, the research facilities shall maintain a monthly record of the specific pollutant regulated and consumed by the hoods. This monthly consumption record will also be included in an annual consumption report for the Research Lab Hoods. This report shall document the amount of the chemicals regulated under 45 CSR 27 and processed through the Research Lab Hoods under the control of Research personnel.

The last line referencing specific sources in the current permit condition is to be deleted.

This letter is to request the Class One Administrative update to revise the above permit in the specified locations.

Thank you for your attention to this issue.

Sincerely,

Robert J. Fehrenbacher  
Plant Manager
