Detailed Process Description

Raw coal is transported from underground via TP-01 to belt BC-01(NC). TP-01 is positioned underground and has no dust control other than confinement in the mine. Belt BC-01 (NC) is covered and feeds screen SS-01 (FE) at TP-02 (TC-FE). TP-2 is enclosed and feeds into the top of the screen.

Material leaves the screen via TP-03 (TC-FE) at the bottom of the screen and drops onto Belts BC-02 (PE) and BC-03 (PE). TP-03 is enclosed and Belts BC-02 and BC-03 are covered.

The screen discharges to one of two product belts, depending on material being rock or coal. If coal, the material discharges through TP-03 to Belt BC-02 (PE). The material then discharges onto Belt BC-04 (PE) through TP-04 (FC-FE). TP-04 is enclosed and Belt BC-04 is covered. Belt BC-04 discharges through TP-06 (MDH) into the raw coal stockpile (OS-02). The raw coal is then loaded by endloader into trucks which is considered to be TP-08 (MDH).

If rock, the material discharges through TP-03 to Belt BC-03. The material then discharges onto Belt BC-05 through TP-05. TP-05 is enclosed and Belt BC-05 is covered. Belt BC-05 discharges through TP-07 (MDH) into the rock stockpile (OS-01). The rock is then loaded by endloader into trucks which is considered to be TP-09 (MDH).

When necessary, the roadway and the area where the endloader operates is watered to minimize dust creation.

Attachment C

Description of Fugitive Emissions

Potential sources of fugitive particulate emissions for this facility include emissions, which are not captured by pollution control equipment and emissions from open stockpiles and vehicular traffic on unpaved haulroads and work areas. The haulroads and work areas will be controlled by a water truck in accordance with the general permit.

The water truck is equipped with pumps sufficient to maintain stockpiles, haulroads and work areas. The water truck will be operated three times daily and more as needed during dry periods. An additive to prevent freezing will be utilized in the winter months when freezing conditions are present.

13.2.1 PAVED ROADS

Emission Estimate For Paved Haulroads

E = [k * (sL/2)^0.65 * (W/3)^1.5 - C] * (1 - (P/4*N) = lb / Vehicle Mile Traveled (VMT)

Where:

		PM	PM-10
k =	particle size multiplier	0.082	0.016
sL =	road surface silt loading, (g/ft^2)	0	
P =	number of days per year with precipitation >0.01 inch	0	
N =	number of days in averaging period	365	
C=	factor for exhaust, brake wear and tire wear	0.0047	0.0047

Emission Factors

For PM E= ($I$34*((($I$35)/2)^0.65)*(((Inputs!G190)/3)^1.5)-($I$38))*(1-((Inputs!$I$1

For PM-10 E= ($J$34)*((($I$35)/2)^0.65)*(((Inputs!G190)/3)^1.5))-($I$38))*(1-((Inputs!I

For lb/hr (lb/vmt)*(miles per trip)*(Max trips per hour)

For Ton/yr (lb/vmt)*(miles per trip)*(Max trips per year)*(1/2000)
