1.0 EXECUTIVE SUMMARY

1.0 EXECUTIVE SUMMARY

Ergon – West Virginia, Inc. (EWVI) owns and operates a petroleum refinery in Newell, West Virginia. The refinery is currently operating under West Virginia Department of Environmental Protection (WV DEP) Regulation 13 Permit No. R13-2334M and Title V Permit No. R30-02900008-2004. The Regulation 13 Permit has undergone several revisions and therefore any references to R13-2334 in this renewal application are referring to version R13-2334M, issued September 13, 2007. The refinery processes crude oil and produces several petroleum products such as diesel, gasoline, kerosene, and crude oils. The Title V Permit expires on February 10, 2009. A permit renewal application for the Title V Permit is due August 10, 2008. This report contains the permit renewal application in accordance with WV DEP rules and regulations.

As a part of this permit renewal application, EWVI is requesting several changes to the existing Title V Permit. These changes are as follows:

1. Tank 4060 has a capacity of 5,040,000 gallons, which is listed incorrectly in Section 1.1 as 4,540,000 gallons. EWVI is requesting that this typographical error be corrected.
2. Tanks 303 and 304 were treated as tanks in prior permits. During an audit, it was determined that these tanks are process vessels. Therefore, they are no longer emission units and have been removed from the Equipment Table in Attachment D. Hence, EWVI is requesting that these tanks be removed from the Title V Permit.
3. Tanks 4063, 4064, and 4065 were permitted but have not yet been constructed. Therefore, they are not included in the Title V Renewal as emission units and have been removed from the Equipment Table in Attachment D. Hence, EWVI is requesting that these tanks be removed from the Title V Permit.
4. The design capacities for TLoad and MLD listed in Section 1.1 are incorrect. Correct values incorporating the addition of the DHT are 344.6 MMgal/yr for TLoad and 101.2 MMgal/yr for MLD. EWVI requests that these throughputs be updated.
5. Several requirements for the heaters and boilers have been relocated into more appropriate sections.
6. EWVI has two diesel firewater pumps that have been added to this application as new emission units (FWPUMP1 and FWPUMP2). See Attachment E for details.
7. The heaters and boilers have been adjusted to use an emissions limit of 160 ppm based on the requirements of 40 Code of Federal Regulations (CFR) Part 60, Subpart J, instead of the 800 ppm specified in CO-SIP-95-1.
8. The EWVI Refinery is not subject to any control requirements specified in 40 CFR Part 61, Subpart FF – Benzene Waste NESHAP for any emission units. Therefore, there are no requirements listed in Attachment E related to 40 CFR Part 61, Subpart FF.

9. Boiler B was de-rated to match the rating of Boiler A (159.5 MMBtu/hr). This assumes that the NOx limit that was approved for Boiler A will be approved for Boiler B.

Since the issuance of the Regulation 13 Permit No. R13-2334 (September 13, 2007), EWVI has made improvements at the refinery that have resulted in an emissions decrease for Boiler B, the wastewater treatment plant, and the Sour Gas Flare. EWVI is in the process of compiling a permit amendment application to incorporate these emission reductions in the NSR permit.

This document contains the Application for Permit and all the supporting documentation requested by the application in accordance with WV DEP regulations. This includes the following attachments:

ATTACHMENT A	AREA MAP
ATTACHMENT B	PLOT PLAN
ATTACHMENT C	PROCESS FLOW DIAGRAM
ATTACHMENT D	EMISSION UNITS TABLE
ATTACHMENT E	EMISSION UNIT FORMS
ATTACHMENT F	SCHEDULE OF COMPLIANCE
ATTACHMENT G	AIR POLLUTION CONTROL DEVICE FORMS
ATTACHMENT H	CAM PLAN FORMS

2.0 TANK GROUPING INFORMATION

2.0 TANK GROUPING INFORMATION

The tanks at EWWI are grouped for permitting purposes based on the type of material stored in the tank. These groupings are used for both throughput and emission limitations. Table 2-1 shows the current throughput and emission limitations for the various groups of tanks. Table 2-2 shows the hazardous air pollutant (HAP) limitations for those tanks which have HAP emissions.

Table 2-1. Tank Limitations

Tanks	Throughput	VOC Emissions		Benzene Emissions	
	gal/yr	tpm	tpy	tpm	tpy
<i>Crude Oil:</i> 4000, 4001, 4002, 4060, 4061, 4062	613,200,000	6.30	29.65	0.17	0.72
<i>Gasoline or Ethanol:</i> 4004, 4005, 4006, 4012, 4013, 4014, 4015, 4016, 4050, 4052, 4053	267,840,300				
<i>Heavy Products or Kerosene:</i> 4003, 4009, 4011, 4054, 4055, 4056, 4057	304,259,760				
<i>Heavy Products:</i> 4007, 4008, 4010, 4017, 4018, 4019, 4020, 4021, 4022, 4023, 4024, 4025, 4026, 4027, 4028, 4029, 4030, 4031, 4032, 4033, 4034, 4035, 4036, 4037, 4038, 4039, 4040, 4041, 4042, 4043, 4044, 4045, 4046, 4047, 4048, 4051, 4103, 4104	550,817,989				

Table 2-2. HAP Limitations

Tanks	Pollutant	Emissions
		tpy
4000, 4001, 4002, 4003, 4009, 4011, 4012, 4013, 4054, 4055	Hexane	0.038
	Benzene	0.064
	Isooctane	0.105
	Toluene	0.212
	Ethylbenzene	0.051
	Xylene	0.238
	Isopropyl Benzene	0.016

As a part of the historical permitting efforts, EWVI has requested the above groupings that have been approved by WV DEP. EWVI is requesting that the above groupings be retained in the renewed Title V Permit. As a result, individual emission rates for each tank are not listed in the respective emission unit forms in Attachment E.

TITLE V PERMIT APPLICATION - GENERAL FORMS

Section 1: General Information

Form with 10 sections: 1. Name of Applicant (Ergon - West Virginia, Inc.), 2. Facility Name or Location (Newell, Hancock County, West Virginia), 3. DAQ Plant ID No. (0 2 9 — 0 0 0 0 8), 4. Federal Employer ID No. (FEIN) (7 2 1 3 7 5 1 1 4), 5. Permit Application Type (Permit Renewal checked), 6. Type of Business Entity (Corporation checked), 7. Is the Applicant the: (Both checked), 8. Number of onsite employees (185), 9. Governmental Code (Privately owned and operated; 0 checked), 10. Business Confidentiality Claims (No checked).

11. Mailing Address		
Street or P.O. Box: P.O. Box 356		
City: Newell	State: WV	Zip: 26050
Telephone Number: (304) 387-4343	Fax Number: (304) 387-7006	

12. Facility Location		
Street: 9995 Ohio River Blvd.	City: Newell	County: Hancock
UTM Easting: 531.25 km	UTM Northing: 4,495.35 km	Zone: <input checked="" type="checkbox"/> 17 or <input type="checkbox"/> 18
Directions: Two miles South of Newell, WV on State Route 2.		
Portable Source? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
Is facility located within a nonattainment area? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, for what air pollutants? Total Suspended Particulate (TSP) PM _{2.5}	
Is facility located within 50 miles of another state? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, name the affected state(s). Ohio Pennsylvania	
Is facility located within 100 km of a Class I Area ¹ ? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If yes, name the area(s).	
If no, do emissions impact a Class I Area ¹ ? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
¹ Class I areas include Dolly Sods and Otter Creek Wilderness Areas in West Virginia, and Shenandoah National Park and James River Face Wilderness Area in Virginia.		

13. Contact Information		
Responsible Official: Mr. H. Don Davis		Title: Executive VP of Manufacturing and Planning
Street or P.O. Box: 2829 Lakeland Dr., Mirror Lake Plaza, Bldg. B

14. Facility Description

List all processes, products, NAICS and SIC codes for normal operation, in order of priority. Also list any process, products, NAICS and SIC codes associated with any alternative operating scenarios if different from those listed for normal operation.

Process	Products	NAICS	SIC
Petroleum Refining	Straight Run Gasoline, Ultra Low Sulfur Diesel, Kerosene, Lube Oil, No. 6 Fuel Oil	324110	2911

Provide a general description of operations.

Ergon - West Virginia, Inc. (EWVI) owns and operates a petroleum refinery in Newell, West Virginia. The refinery is currently operating under West Virginia Department of Environmental Protection (WV DEP) Regulation 13 Permit No. R13-2334M and Title V Permit No. R30-02900008-2004. The refinery processes crude oil and produces several petroleum products such as diesel, gasoline, kerosene, and crude oils.

15. Provide an **Area Map** showing plant location as **ATTACHMENT A**.

16. Provide a **Plot Plan(s)**, e.g. scaled map(s) and/or sketch(es) showing the location of the property on which the stationary source(s) is located as **ATTACHMENT B**. For instructions, refer to "Plot Plan - Guidelines."

17. Provide a detailed **Process Flow Diagram(s)** showing each process or emissions unit as **ATTACHMENT C**. Process Flow Diagrams should show all emission units, control equipment, emission points, and their relationships.

Section 2: Applicable Requirements

18. Applicable Requirements Summary	
Instructions: Mark all applicable requirements.	
<input type="checkbox"/> SIP	<input type="checkbox"/> FIP
<input checked="" type="checkbox"/> Minor source NSR (45CSR13)	<input type="checkbox"/> PSD (45CSR14)
<input checked="" type="checkbox"/> NESHAP (45CSR15)	<input type="checkbox"/> Nonattainment NSR (45CSR19)

19. Non Applicability Determinations
<p>List all requirements which the source has determined not applicable and for which a permit shield is requested. The listing shall also include the rule citation and the reason why the shield applies.</p> <p>40 CFR 60, Subpart D - The boilers do not have rated capacities greater than 250 MMBtu/hr.</p> <p>40 CFR 60, Subpart Da - The boilers are not in electric utility service and do not have capacities greater than 250 MMBtu/hr.</p> <p>40 CFR 60, Subpart Db - There are no steam generating units that commenced construction, modification, or reconstruction after June 19, 1984 with a rated capacity of greater than 100 MMBtu/hr.</p> <p>40 CFR 60, Subpart Ka - Tanks 4044, 4045, and 4046 have capacities greater than 40,000 gallons and were constructed within the applicability dates. However, 40 CFR 60.112a(a) exempts these vessels due to the fact that they contain a petroleum liquid which, as stored, has a true vapor pressure less than 10.3 kPa (1.5 psia).</p> <p>40 CFR 61, Subpart V – Due to the fact that the Newell Refinery is not subject to an additional subpart in Part 61, Subpart V does not apply.</p> <p>40 CFR 63, Subpart H – Due to the fact that the refinery is not subject to an additional subpart of 40 CFR 63, Subpart H is not applicable.</p> <p>40 CFR 63, Subpart Y – The facility has existing marine loading operations that began before the final rule was issued in September 1995. Therefore, to be subject to Subpart Y, the hazardous air pollutant (HAP) emissions from the marine tank vessel loading operations must exceed 10 or 25 tons. Marine tank vessel loading operations do not exceed these thresholds.</p> <p>40 CFR 63, Subpart OO – Subpart OO would only apply to the Newell Refinery if it were referenced in another subpart to which it was subject. Subpart OO is not referenced in any Subpart to which the refinery is subject and therefore it does not apply.</p>
<input checked="" type="checkbox"/> Permit Shield

19. Non Applicability Determinations (Continued) - Attach additional pages as necessary.

List all requirements which the source has determined not applicable and for which a permit shield is requested. The listing shall also include the rule citation and the reason why the shield applies.

40 CFR 63, Subpart PP - Subpart PP would only apply to the Newell Refinery if it were referenced in another subpart to which it was subject. Subpart PP is not referenced in any Subpart to which the refinery is subject and therefore it does not apply.

40 CFR 63, Subpart QQ - Subpart QQ would only apply to the Newell Refinery if it were referenced in another subpart to which it was subject. Subpart QQ is not referenced in any Subpart to which the refinery is subject and therefore it does not apply.

40 CFR 63, Subpart RR - Subpart RR would only apply to the Newell Refinery if it were referenced in another subpart to which it was subject. Subpart RR is not referenced in any Subpart to which the refinery is subject and therefore it does not apply.

40 CFR 63, Subpart VV - Subpart VV would only apply to the Newell Refinery if it were referenced in another subpart to which it was subject. Subpart VV is not referenced in any Subpart to which the refinery is subject and therefore it does not apply.

40 CFR 63, Subpart UUU – The Newell Refinery does not have Catalytic Cracking Units, Catalytic Reforming Units, or Sulfur Recovery Units.

40 CFR 63, Subpart EEEE – EWVI is not subject to this subpart because the refinery is already a HAP major source that is subject to the Refinery NESHAP (40 CFR 63, Subpart CC).

Permit Shield

20. Facility-Wide Applicable Requirements

List all facility-wide applicable requirements. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements).

Limitations and Standards:

Open burning - 45 CSR 6-3.1

Open burning exemptions - 45 CSR 6-3.2

Asbestos - 40 CFR 61

Odor - 45 CSR 4-3.1

Permanent shutdown - 45 CSR 13-10.5

Standby plan for reducing emissions - 45 CSR 11-5.2

Emission inventory - W.Va. Code 22-5-4(a)(14)

Ozone-depleting substances - 40 CFR 82, Subpart F

Risk Management Plan - 40 CFR 68

Sulfur Dioxide - CO-SIP-95-1 - Condition IV.1.(SIP'ed)

Sulfur Dioxide - CO-SIP-95-1 - Condition IV.2.(SIPed)

Hydrogen Sulfide and Sulfur Dioxide - CO-SIP-95-1 - Condition IV.9.(SIPed)

HAPs Emission Standards - 45 CSR 13

Performance Standards for New Stationary Sources - 45 CSR 13

Standards of Performance for Petroleum Refineries - 45 CSR 13

HAPs Emission Standards for Source Categories – 45 CSR 13

Startup, shutdown, and malfunction plan – 40 CFR 63.6(e)(3) and 45 CSR 34-2.1

Petroleum Refineries MACT – 40 CFR 63.640(h) and 45 CSR 34-2.1

Petroleum Refineries MACT – 40 CFR 63.642(g) and 45 CSR 34-2.1

Petroleum Refineries MACT – 40 CFR 63.642(i) and 45 CSR 34-2.1

Petroleum Refineries MACT – 40 CFR 63.642(k) and 45 CSR 34-2.1

Petroleum Refineries MACT – 40 CFR 63.642(l) and 45 CSR 34-2.1

Petroleum Refineries MACT – 40 CFR 63.642(m) and 45 CSR 34-2.1

Consent Decree Civil No. 3: 03CV114010S

Industrial Boilers MACT – 45 CSR 34, 45 CSR 30-12.1,12.3, and 12.4

Site Remediation MACT – 40 CFR 63, Subpart GGGG, 40 CFR 63.7950(b), and 45 CSR 34-2.1

Maintenance of Air Pollution Control Equipment – 45 CSR 13-5.11

Standards of Performance for Equipment Leaks of VOC in Petroleum Refineries – 40 CFR 60, Subpart GGG

Permit Shield

For all facility-wide applicable requirements listed above, provide monitoring/testing / recordkeeping / reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number and/or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring Requirements:

Not applicable

Testing Requirements:

Stack testing – WV Code 22-5-4(a)(15) and 45 CSR 13

Performance test notification – 40 CFR 63.642(d)(2) and (3), and 45 CSR 34-2.1

Recordkeeping Requirements:

Monitoring information – 45 CSR 30.5.1.c.2.A

Retention of records – 45 CSR 30-5.1.c.2.B

Odors – 45 CSR 30-5.1.c

Petroleum Refineries MACT – 40 CFR 63.10(b)(2) and 45 CSR 34-2.1

Record of Maintenance of Air Pollution Control Equipment – 45 CSR 13

Reporting Requirements:

Responsible official – 45 CSR 30-4.4 and 5.1.c.3.D

Confidential Business Information – 45 CSR 30-5.1.c.3.E

Submissions

Certified emissions statement – 45 CSR 30-8

Compliance certification – 45 CSR 30-5.3.e

Semi-annual monitoring reports – 45 CSR 30-5.1.c.3.A

Emergencies

Deviations – 45 CSR 30-5.1.c.3.B,C and D

New applicable requirements – 45 CSR 30-4.3.h.1.B

Notification of Compliance Status Report – 40 CFR 63.654(f) and 45 CSR 34-2.1

Periodic Reports – 40 CFR 63.654(g) and 45 CSR 34-2.1

Performance Test Results – 40 CFR 63.654(g)(7) and 45 CSR 34-2.1

MACT Reporting – 40 CFR 63.654(h)(1) and 45 CSR 34-2.1

Parametric Monitoring – 40 CFR 63.654(h)(4) and 45 CSR 34-2.1

Alternative Monitoring and Recordkeeping – 40 CFR 63.654(h)(5) and 45 CSR 34-2.1

Reporting performance evaluation results – 40 CFR 63.8(f)(5)(i) and 45 CSR 34-2.1

Request to use alternative monitoring procedure – 40 CFR 63.8(f)(4) and 45 CSR 34-2.1

Use of an alternative nonopacity emission standard – 40 CFR 63.6(g) and 45 CSR 34-2.1

Request to waive a performance test – 40 CFR 63.7(h)(3)(i) and (iii) and 45 CSR 34-2.1

Determinations – 40 CFR 63.654(h)(6) and 45 CSR 34-2.1

Are you in compliance with all facility-wide applicable requirements? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

20. Facility-Wide Applicable Requirements (Continued) - Attach additional pages as necessary.

List all facility-wide applicable requirements. For each applicable requirement, include the rule citation and/or permit with the condition number.

Permit Shield

For all facility-wide applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number and/or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Are you in compliance with all facility-wide applicable requirements? Yes No

If no, complete the Schedule of Compliance Form as ATTACHMENT F.

Section 3: Facility-Wide Emissions

23. Facility-Wide Emissions Summary [Tons per Year]	
Criteria Pollutants	Potential Emissions
Carbon Monoxide (CO)	238.64
Nitrogen Oxides (NO _x)	273.90
Lead (Pb)	
Particulate Matter (PM _{2.5}) ^{1*}	23.68
Particulate Matter (PM ₁₀) ^{1*}	23.68
Total Particulate Matter (TSP) [*]	23.68
Sulfur Dioxide (SO ₂)	132.83
Volatile Organic Compounds (VOC)	204.42
Hazardous Air Pollutants ²	Potential Emissions
Benzene	5.54
Regulated Pollutants other than Criteria and HAP	Potential Emissions
¹ PM _{2.5} and PM ₁₀ are components of TSP. ² For HAPs that are also considered PM or VOCs, emissions should be included in both the HAPs section and the Criteria Pollutants section.	

*For purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Section 4: Insignificant Activities

24. Insignificant Activities (Check all that apply)	
<input checked="" type="checkbox"/>	1. Air compressors and pneumatically operated equipment, including hand tools.
<input checked="" type="checkbox"/>	2. Air contaminant detectors or recorders, combustion controllers or shutoffs.
<input checked="" type="checkbox"/>	3. Any consumer product used in the same manner as in normal consumer use, provided the use results in a duration and frequency of exposure which are not greater than those experienced by consumer, and which may include, but not be limited to, personal use items; janitorial cleaning supplies, office supplies and supplies to maintain copying equipment.
<input checked="" type="checkbox"/>	4. Bathroom/toilet vent emissions.
<input checked="" type="checkbox"/>	5. Batteries and battery charging stations, except at battery manufacturing plants.
<input checked="" type="checkbox"/>	6. Bench-scale laboratory equipment used for physical or chemical analysis, but not lab fume hoods or vents. Many lab fume hoods or vents might qualify for treatment as insignificant (depending on the applicable SIP) or be grouped together for purposes of description.
<input type="checkbox"/>	7. Blacksmith forges.
<input checked="" type="checkbox"/>	8. Boiler water treatment operations, not including cooling towers.
<input checked="" type="checkbox"/>	9. Brazing, soldering or welding equipment used as an auxiliary to the principal equipment at the source.
<input type="checkbox"/>	10. CO ₂ lasers, used only on metals and other materials which do not emit HAP in the process.
<input checked="" type="checkbox"/>	11. Combustion emissions from propulsion of mobile sources, except for vessel emissions from Outer Continental Shelf sources.
<input checked="" type="checkbox"/>	12. Combustion units designed and used exclusively for comfort heating that use liquid petroleum gas or natural gas as fuel.
<input checked="" type="checkbox"/>	13. Comfort air conditioning or ventilation systems not used to remove air contaminants generated by or released from specific units of equipment.
<input checked="" type="checkbox"/>	14. Demineralized water tanks and demineralizer vents.
<input type="checkbox"/>	15. Drop hammers or hydraulic presses for forging or metalworking.
<input type="checkbox"/>	16. Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam.
<input type="checkbox"/>	17. Emergency (backup) electrical generators at residential locations.
<input type="checkbox"/>	18. Emergency road flares.
<input checked="" type="checkbox"/>	<p>19. Emission units which do not have any applicable requirements and which emit criteria pollutants (CO, NO_x, SO₂, VOC and PM) into the atmosphere at a rate of less than 1 pound per hour and less than 10,000 pounds per year aggregate total for each criteria pollutant from all emission units.</p> <p>Please specify all emission units for which this exemption applies along with the quantity of criteria pollutants emitted on an hourly and annual basis:</p> <p>Sandblasting - 11b/hr PM and 672 lb/yr PM</p>

24. Insignificant Activities (Check all that apply)	
<input type="checkbox"/>	20. Emission units which do not have any applicable requirements and which emit hazardous air pollutants into the atmosphere at a rate of less than 0.1 pounds per hour and less than 1,000 pounds per year aggregate total for all HAPs from all emission sources. This limitation cannot be used for any source which emits dioxin/furans nor for toxic air pollutants as per 45CSR27. Please specify all emission units for which this exemption applies along with the quantity of hazardous air pollutants emitted on an hourly and annual basis:
<input type="checkbox"/>	21. Environmental chambers not using hazardous air pollutant (HAP) gases.
<input type="checkbox"/>	22. Equipment on the premises of industrial and manufacturing operations used solely for the purpose of preparing food for human consumption.
<input type="checkbox"/>	23. Equipment used exclusively to slaughter animals, but not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating equipment.
<input checked="" type="checkbox"/>	24. Equipment used for quality control/assurance or inspection purposes, including sampling equipment used to withdraw materials for analysis.
<input checked="" type="checkbox"/>	25. Equipment used for surface coating, painting, dipping or spray operations, except those that will emit VOC or HAP.
<input checked="" type="checkbox"/>	26. Fire suppression systems.
<input checked="" type="checkbox"/>	27. Firefighting equipment and the equipment used to train firefighters.
<input type="checkbox"/>	28. Flares used solely to indicate danger to the public.
<input checked="" type="checkbox"/>	29. Fugitive emission related to movement of passenger vehicle provided the emissions are not counted for applicability purposes and any required fugitive dust control plan or its equivalent is submitted.
<input checked="" type="checkbox"/>	30. Hand-held applicator equipment for hot melt adhesives with no VOC in the adhesive formulation.
<input checked="" type="checkbox"/>	31. Hand-held equipment for buffing, polishing, cutting, drilling, sawing, grinding, turning or machining wood, metal or plastic.
<input type="checkbox"/>	32. Humidity chambers.
<input checked="" type="checkbox"/>	33. Hydraulic and hydrostatic testing equipment.
<input checked="" type="checkbox"/>	34. Indoor or outdoor kerosene heaters.
<input checked="" type="checkbox"/>	35. Internal combustion engines used for landscaping purposes.
<input type="checkbox"/>	36. Laser trimmers using dust collection to prevent fugitive emissions.
<input type="checkbox"/>	37. Laundry activities, except for dry-cleaning and steam boilers.
<input checked="" type="checkbox"/>	38. Natural gas pressure regulator vents, excluding venting at oil and gas production facilities.
<input checked="" type="checkbox"/>	39. Oxygen scavenging (de-aeration) of water.
<input type="checkbox"/>	40. Ozone generators.
<input checked="" type="checkbox"/>	41. Plant maintenance and upkeep activities (e.g., grounds-keeping, general repairs, cleaning, painting, welding, plumbing, re-tarring roofs, installing insulation, and paving parking lots) provided these activities are not conducted as part of a manufacturing process, are not related to the source's primary business activity, and not otherwise triggering a permit modification. (Cleaning and painting activities qualify if they are not subject to VOC or HAP control requirements. Asphalt batch plant

24. Insignificant Activities (Check all that apply)	
	owners/operators must still get a permit if otherwise requested.)
<input checked="" type="checkbox"/>	42. Portable electrical generators that can be moved by hand from one location to another. "Moved by Hand" means that it can be moved without the assistance of any motorized or non-motorized vehicle, conveyance, or device.
<input checked="" type="checkbox"/>	43. Process water filtration systems and demineralizers.
<input checked="" type="checkbox"/>	44. Repair or maintenance shop activities not related to the source's primary business activity, not including emissions from surface coating or de-greasing (solvent metal cleaning) activities, and not otherwise triggering a permit modification.
<input checked="" type="checkbox"/>	45. Repairs or maintenance where no structural repairs are made and where no new air pollutant emitting facilities are installed or modified.
<input checked="" type="checkbox"/>	46. Routing calibration and maintenance of laboratory equipment or other analytical instruments.
<input type="checkbox"/>	47. Salt baths using nonvolatile salts that do not result in emissions of any regulated air pollutants. Shock chambers.
<input type="checkbox"/>	48. Shock chambers.
<input type="checkbox"/>	49. Solar simulators.
<input checked="" type="checkbox"/>	50. Space heaters operating by direct heat transfer.
<input checked="" type="checkbox"/>	51. Steam cleaning operations.
<input checked="" type="checkbox"/>	52. Steam leaks.
<input type="checkbox"/>	53. Steam sterilizers.
<input checked="" type="checkbox"/>	54. Steam vents and safety relief valves.
<input type="checkbox"/>	55. Storage tanks, reservoirs, and pumping and handling equipment of any size containing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized.
<input checked="" type="checkbox"/>	56. Storage tanks, vessels, and containers holding or storing liquid substances that will not emit any VOC or HAP. Exemptions for storage tanks containing petroleum liquids or other volatile organic liquids should be based on size limits such as storage tank capacity and vapor pressure of liquids stored and are not appropriate for this list.
<input checked="" type="checkbox"/>	57. Such other sources or activities as the Director may determine.
<input checked="" type="checkbox"/>	58. Tobacco smoking rooms and areas.
<input checked="" type="checkbox"/>	59. Vents from continuous emissions monitors and other analyzers.

Section 5: Emission Units, Control Devices, and Emission Points

25. Equipment Table
Fill out the Title V Equipment Table and provide it as ATTACHMENT D .
26. Emission Units
For each emission unit listed in the Title V Equipment Table , fill out and provide an Emission Unit Form as ATTACHMENT E .
For each emission unit not in compliance with an applicable requirement, fill out a Schedule of Compliance Form as ATTACHMENT F .
27. Control Devices
For each control device listed in the Title V Equipment Table , fill out and provide an Air Pollution Control Device Form as ATTACHMENT G .
For any control device that is required on an emission unit in order to meet a standard or limitation for which the potential pre-control device emissions of an applicable regulated air pollutant is greater than or equal to the Title V Major Source Threshold Level, refer to the Compliance Assurance Monitoring (CAM) Form(s) for CAM applicability. Fill out and provide these forms, if applicable, for each Pollutant Specific Emission Unit (PSEU) as ATTACHMENT H .

Section 6: Certification of Information

28. Certification of Truth, Accuracy and Completeness and Certification of Compliance

*Note: This Certification must be signed by a responsible official. The **original**, signed in **blue ink**, must be submitted with the application. Applications without an **original** signed certification will be considered as incomplete.*

a. Certification of Truth, Accuracy and Completeness

I certify that I am a responsible official (as defined at 45CSR§30-2.38) and am accordingly authorized to make this submission on behalf of the owners or operators of the source described in this document and its attachments. I certify under penalty of law that I have personally examined and am familiar with the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine and/or imprisonment.

b. Compliance Certification

Except for requirements identified in the Title V Application for which compliance is not achieved, I, the undersigned hereby certify that, based on information and belief formed after reasonable inquiry, all air contaminant sources identified in this application are in compliance with all applicable requirements.

Responsible official (type or print)

Name: Neil Stanton	Title: Vice President, Refining
--------------------	---------------------------------

Responsible official's signature:

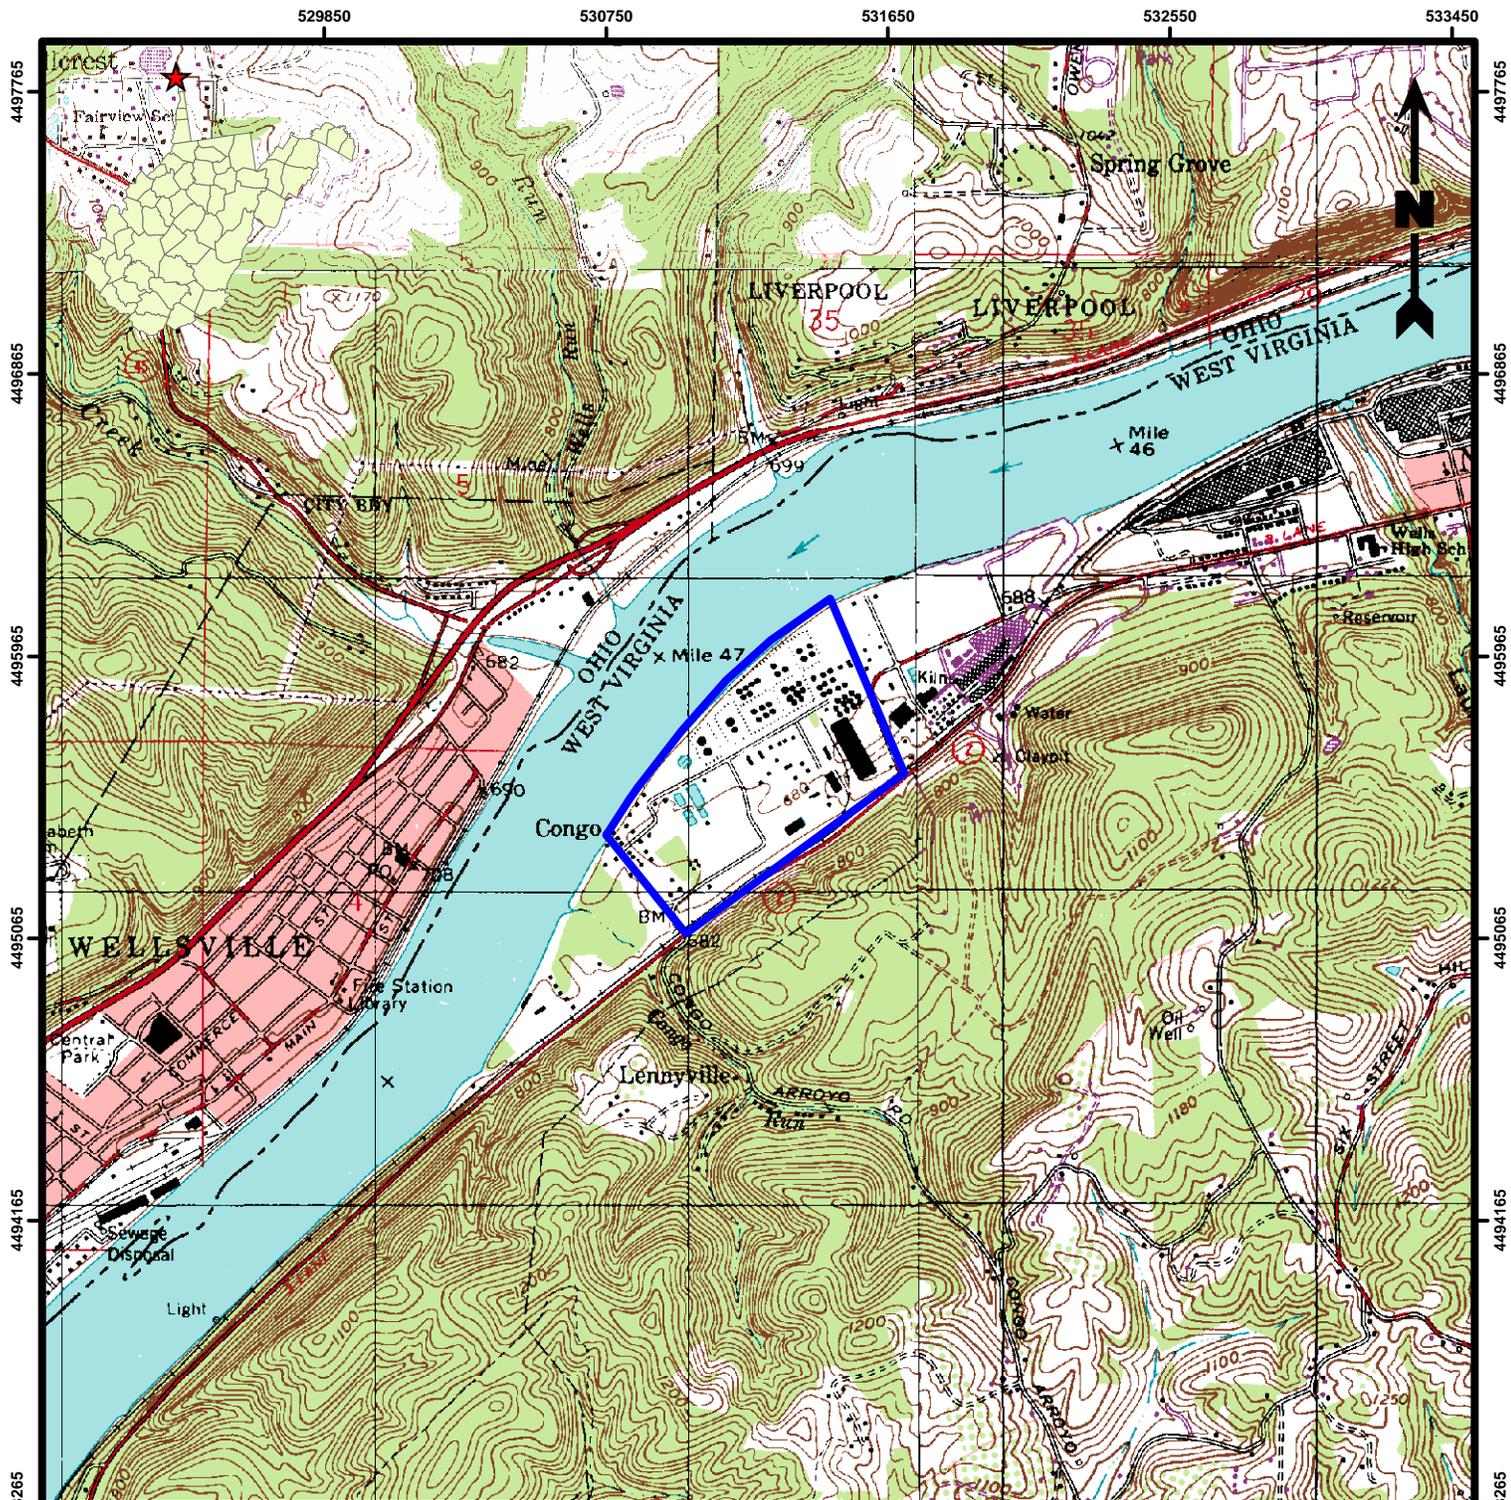

Signature: _____ Signature Date: _____
 (Must be signed and dated in blue ink)

Note: Please check all applicable attachments included with this permit application:

¹For 45CSR13 permitted sources, the numbering system used for the emission points, control devices, and emission units should be consistent with the numbering system used in the 45CSR13 permit. For grandfathered sources, the numbering system should be consistent with registrations or emissions inventory previously submitted to DAQ. For emission points, control devices, and emissions units which have not been previously labeled, use the following 45CSR13 numbering system: 1S, 2S, 3S,... or other appropriate description for emission units; 1C, 2C, 3C,... or other appropriate designation for control devices; 1E, 2E, 3E, ... or other appropriate designation for emission points.

ATTACHMENT E – EMISSION UNIT FORMS

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: CDU	Emission unit name: CDU	List any control devices associated with this emission unit: Emergency Flare
--	-----------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Crude Distillation Unit

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1972	Installation date: MM/DD/1972	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
730,000 bbls/mo

Maximum Hourly Throughput: 1,000 bbl/hr	Maximum Annual Throughput: 7,300,000 bbl/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___ Yes <input checked="" type="checkbox"/> No	If yes, is it? ___ Indirect Fired ___ Direct Fired
---	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data – Emissions from the CDU are routed to the Sour Fuel Gas System.		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})*		
Particulate Matter (PM ₁₀)*		
Total Particulate Matter (TSP)*		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY
<p>List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).</p>		

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 13
Limitations – Sections 6.1.1 - R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 13

Monitoring:

N/A

Testing:

N/A

Recordkeeping:

To determine compliance with the crude oil charge rate limits, EWVI shall keep daily records along with monthly and yearly totals of the amount of crude oil charged to the crude oil distillation unit. Compliance with the yearly limit shall be based on a 12-month rolling total. This information shall be recorded in the same manner as prescribed in Permit R13-2334 or EWVI may utilize its own format.

[45CSR13 - Permit R13-2334 - 6.2.1.]

Reporting:

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 001-01	Emission unit name: H-101	List any control devices associated with this emission unit: N/A
---	-------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
CDU Atmospheric Heater; refinery fuel gas/natural gas blend

Manufacturer: Econotherm	Model number: Not Available	Serial number: J70-786
------------------------------------	---------------------------------------	----------------------------------

Construction date: 03/01/1972	Installation date: 04/01/1972	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
57.8 MMBtu/hr

Maximum Hourly Throughput: 56,667 cf/hr	Maximum Annual Throughput: 496 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 57.8 MMBtu/hr	Type and Btu/hr rating of burners: Low NOx Burner 57.8 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Refinery Fuel Gas/Natural Gas Blend
Max Hourly Usage = 56,667 cf/hr
Max Annual Usage = 496 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Refinery Fuel Gas/Natural Gas Blend	0.016%	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	2.31	10.13
Nitrogen Oxides (NO _x)	3.76	16.45
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.43	1.89
Particulate Matter (PM ₁₀)	0.43	1.89
Total Particulate Matter (TSP)	0.43	1.89
Sulfur Dioxide (SO ₂)	1.53	6.71
Volatile Organic Compounds (VOC)	0.58	2.53
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

Emission factors for CO and VOC are based on the manufacturer's guarantee.

The NO_x emission factor is the maximum emission rate allowed under Section V.11.B of the Consent Decree. The unit is equipped with low-NO_x burners. Performance testing indicates an emission factor of 0.051 lb/MMBtu.

The emission factor for SO₂ is based on 160 ppm H₂S limit, based on 40 CFR 60, Subpart J limitations.

The emission factor for PM was obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11, 4.1.12, 4.1.13 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.21, 4.1.20 - R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3 and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.

- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

EWVI shall demonstrate compliance with sections 3, 4 and 5 of 45CSR10 by testing and /or monitoring in accordance with one or more of the following: 40 CFR Part 60, Appendix A, Method 6, Method 15, continuous emissions monitoring systems (CEMS) or fuel sampling and analysis as set forth in an approved monitoring plan for each emission unit.

[45 CSR 10-8.2.c; 45CSR13 - Permit R13-2334 - 4.1.14]

Testing:

N/A

Recordkeeping:

EWVI shall maintain an on-site record of all required monitoring data as established in a monitoring plan pursuant to 45CSR 10-8.2.c. Such records shall be made available to the Director upon request. Records shall be retained on-site for a minimum of five years.

[45 CSR 10-8.3.a; 45 CSR 13 – Permit R13-2334 – 4.4.4]

EWVI shall maintain records of the operating schedule and the quantity and quality of fuel consumed in each unit in a manner specified by the Director. Such records shall be maintained on-site and made available to the Director upon request.

[45 CSR 10-8.3.c; 45 CSR 13 - Permit R13-2334 – 4.4.5]

Reporting:

EWVI shall submit a periodic exception report to the Director, in a manner specified by the Director. Such an exception report shall provide details of all excursions outside the range of measured emissions or monitored parameters established in an approved monitoring plan and shall include the time of the excursion, the magnitude of the excursion, the duration of the excursion, the cause of the excursion, and the corrective action taken.

[45 CSR 10-8.3.b; 45 CSR 13 – Permit R13-2334 – 4.5.2]

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

N/A

Testing:

EWVI shall conduct a performance test for NO_x. The results shall be based upon the average of three (3) one hour testing periods in accordance with EPA methods at 40 CFR 60 Appendix A.

[45 CSR 13 – Permit R13-2334 – 4.3.2 (Boiler C and Heater 101)]

EWVI shall conduct a performance test to determine NO_x emissions rate limits. Such performance test shall be conducted in accordance with an approved EPA method and shall be performed during the operating condition of combusting the maximum amount of refinery fuel gas within the natural gas/refinery fuel gas mixture feasible at the time of the test (with the understanding that the maximum percentage of refinery fuel gas within the mixture could be as high as 100%). At least 30 days prior to testing, EWVI shall submit a test protocol subject to approval by the Director.

[45 CSR 13 – Permit R13-2334 – 4.3.3]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

EWVI shall keep monthly records of the amount of fuel gas (refinery plus natural gas) consumed within the heater. NO_x emission factors shall be obtained from the Global Consent Decree (Civil No. 3:03CV114010S), which sets a limit of 0.065 lb/MMBtu. Compliance with the yearly limit shall be based on a 12-month rolling total. Compliance with the SO₂ limit shall demonstrate compliance with the less stringent requirement of CO-SIP-95-1 – Condition IV.4. (SIPed) and 45CSR10-3.1.e.

[45 CSR 13 – Permit R13-2334 – 4.4.8 (H-101 and H-102), CO-SIP-95-1 – Condition IV.4. (SIPed) and 45 CSR 10-3.1.e]

Reporting:

N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

EWVI shall have installed and shall calibrate, maintain, and operate a continuous emission monitoring system as herein provided to measure the concentration of hydrogen sulfide in all refinery fuel gas streams. Installation, calibration, maintenance, and operation of such continuous emission monitoring system shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7. The Director may approve the installation of sulfur dioxide and oxygen monitoring systems to monitor sulfur dioxide emissions in the exhaust gases from combustion units firing refinery fuel gas in lieu of a hydrogen sulfide monitoring system for the fuel gas streams. Such SO₂ and oxygen monitoring systems shall be subject to the performance specifications, quality assurance procedures, and other related requirements under 40 CFR Part 60.

[CO-SIP-95-1 – Condition V.6 (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring

system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 001-02	Emission unit name: H-102	List any control devices associated with this emission unit: N/A
---	-------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
CDU Vacuum Heater; refinery fuel gas/natural gas blend or fuel oil

Manufacturer: Econotherm	Model number: Not Available	Serial number: J70-787
------------------------------------	---------------------------------------	----------------------------------

Construction date: 03/01/1972	Installation date: 04/01/1972	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
24.8 MMBtu/hr

Maximum Hourly Throughput: 24,314 cf/hr	Maximum Annual Throughput: 212.98 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 24.8 MMBtu/hr	Type and Btu/hr rating of burners: Low NOx Burner 24.8 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Refinery Fuel Gas/Natural Gas Blend
Max Hourly Usage = 24,314 cf/hr
Max Annual Usage = 212.98 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Refinery Fuel Gas/Natural Gas Blend	0.016%	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	0.99	4.34
Nitrogen Oxides (NO _x)	1.22	5.32
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.18	0.81
Particulate Matter (PM ₁₀)	0.18	0.81
Total Particulate Matter (TSP)	0.18	0.81
Sulfur Dioxide (SO ₂)	0.66	2.88
Volatile Organic Compounds (VOC)	0.25	1.09
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

Emission factors for CO and VOC are based on the manufacturer's guarantee.

The NO_x emission factor is 0.049 based on AP-42 for small, controlled, low NO_x boiler.

The emission factor for PM was obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.2, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.5, 4.1.10, 4.1.11, 4.1.12, 4.1.13, 4.1.14 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.21 - R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3 and 4) as provided in one of the following subdivisions:

a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise

required by the Director:

1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

EWVI shall demonstrate compliance with sections 3, 4 and 5 of 45CSR10 by testing and /or monitoring in accordance with one or more of the following: 40 CFR Part 60, Appendix A, Method 6, Method 15, continuous emissions monitoring systems (CEMS) or fuel sampling and analysis as set forth in an approved monitoring plan for each emission unit.

[45 CSR 10-8.2.c; 45CSR13 - Permit R13-2334 - 4.1.14]

Testing:

N/A

Recordkeeping:

EWVI shall maintain an on-site record of all required monitoring data as established in a monitoring plan pursuant to 45CSR 10-8.2.c. Such records shall be made available to the Director upon request. Records shall be retained on-site for a minimum of five years.

[45 CSR 10-8.3.a; 45 CSR 13 – Permit R13-2334 – 4.4.4]

EWVI shall maintain records of the operating schedule and the quantity and quality of fuel consumed in each unit in a manner specified by the Director. Such records shall be maintained on-site and made available to the Director upon request.

[45 CSR 10-8.3.c; 45 CSR 13 - Permit R13-2334 – 4.4.5]

Reporting:

EWVI shall submit a periodic exception report to the Director, in a manner specified by the Director. Such an exception report shall provide details of all excursions outside the range of measured emissions or monitored parameters established in an approved monitoring plan and shall include the time of the excursion, the magnitude of the excursion, the duration of the excursion, the cause of the excursion, and the corrective action taken.

[45 CSR 10-8.3.b; 45 CSR 13 – Permit R13-2334 – 4.5.2]

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel

shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

N/A

Testing:

EWVI shall conduct a performance test to determine NO_x emissions rate limits. Such performance test shall be conducted in accordance with an approved EPA method and shall be performed during the operating condition of combusting the maximum amount of refinery fuel gas within the natural gas/refinery fuel gas mixture feasible at the time of the test (with the understanding that the maximum percentage of refinery fuel gas within the mixture could be as high as 100%). At least 30 days prior to testing, EWVI shall submit a test protocol subject to approval by the Director.

[45 CSR 13 – Permit R13-2334 – 4.3.3]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

EWVI shall keep monthly records of the amount of fuel gas (refinery plus natural gas) consumed within the heater. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume 1, Supplement D, Chapter 1.4*, may be used to estimate monthly emissions. Compliance with the yearly limit shall be based on a 12-month rolling total. Compliance with the SO₂ limit shall demonstrate compliance with the less stringent requirement of CO-SIP-95-1 – Condition IV.4. (SIPed) and 45CSR10-3.1.e.

[45 CSR 13 – Permit R13-2334 – 4.4.8 (H-101 and H-102), CO-SIP-95-1 – Condition IV.4. (SIPed) and 45 CSR 10-3.1.e]

Reporting:

N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

EWVI shall have installed and shall calibrate, maintain, and operate a continuous emission monitoring system as herein provided to measure the concentration of hydrogen sulfide in all refinery fuel gas streams. Installation, calibration, maintenance, and operation of such continuous emission monitoring system shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7. The Director may approve the installation of sulfur dioxide and oxygen monitoring systems to monitor sulfur dioxide emissions in the exhaust gases from combustion units firing refinery fuel gas in lieu of a hydrogen sulfide monitoring system for the fuel gas streams. Such SO₂ and oxygen monitoring systems shall be subject to the performance specifications, quality assurance procedures, and other related requirements under 40 CFR Part 60.

[CO-SIP-95-1 – Condition V.6 (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No
If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 002-01	Emission unit name: H-201	List any control devices associated with this emission unit: N/A
---	-------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
PDR Heater; refinery fuel gas/natural gas blend or fuel oil

Manufacturer: Econotherm	Model number: Not Available	Serial number: J70-788
------------------------------------	---------------------------------------	----------------------------------

Construction date: 03/01/1972	Installation date: 04/01/1972	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
6.6 MMBtu/hr

Maximum Hourly Throughput: 6,471 cf/hr	Maximum Annual Throughput: 56.68 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 6.6 MMBtu/hr	Type and Btu/hr rating of burners: Low NOx Burner 6.6 MMBtu/hr
--	---

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Refinery Fuel Gas/Natural Gas Blend
Max Hourly Usage = 6,471 cf/hr
Max Annual Usage = 56.68 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Refinery Fuel Gas/ Natural Gas Blend	0.016%	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	0.54	2.38
Nitrogen Oxides (NO _x)	0.63	2.76
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.05	0.22
Particulate Matter (PM ₁₀)	0.05	0.22
Total Particulate Matter (TSP)	0.05	0.22
Sulfur Dioxide (SO ₂)	0.17	0.77
Volatile Organic Compounds (VOC)	0.04	0.16
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

The emission factors for PM, CO, and VOC were obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

The emission factor for SO₂ is based on 160 ppm H₂S limit, based on 40 CFR 60, Subpart J limitations.

The emission factor for NO_x is based on performance testing.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2
Limitations – Sections 4.1.1, 4.1.3, 4.1.4 - R13-2334M
Applicable Requirement - 45 CSR 10
Limitations – Sections 4.1.12 - R13-2334M
Applicable Requirement - 45 CSR 13
Limitations – Sections 4.1.6, 4.1.22 - R13-2334M
Applicable Requirement – CO-SIP-95
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

N/A

Reporting:

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

Testing:
N/A

Recordkeeping:
N/A

Reporting:

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:
N/A

Testing:

EWVI shall conduct a performance test to determine NO_x emissions rate limits. Such performance test shall be conducted in accordance with an approved EPA method and shall be performed during the operating condition of combusting the maximum amount of refinery fuel gas within the natural gas/refinery fuel gas mixture feasible at the time of the test (with the understanding that the maximum percentage of refinery fuel gas within the mixture could be as high as 100%). At least 30 days prior to testing, EWVI shall submit a test protocol subject to approval by the Director.

[45 CSR 13 – Permit R13-2334 – 4.3.3]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with the emissions limits, EWVI shall keep monthly records of the amount of fuel gas (refinery plus natural gas) consumed within the heater. This information, along with appropriate emission factors from *EPA's Supplement D, Chapter 1.4*, may be used to estimate monthly emissions of all pollutants except SO₂. SO₂ emission factors shall be based on the 1995 SIP and heating value (HHV), which sets a limit of 0.13260 lb/MMBtu. Compliance with the yearly limit shall be based on a 12-month rolling total.

[45 CSR 13 – Permit R13-2334 – 4.4.10 (H-201, H-500S and H-600S)]

Reporting:
N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

EWVI shall have installed and shall calibrate, maintain, and operate a continuous emission monitoring system as herein provided to measure the concentration of hydrogen sulfide in all refinery fuel gas streams. Installation, calibration, maintenance, and operation of such continuous emission monitoring system shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7. The Director may approve the installation of sulfur dioxide and oxygen monitoring systems to monitor sulfur dioxide emissions in the exhaust gases from combustion units firing refinery fuel gas in lieu of a hydrogen sulfide monitoring system for the

fuel gas streams. Such SO₂ and oxygen monitoring systems shall be subject to the performance specifications, quality assurance procedures, and other related requirements under 40 CFR Part 60.

[CO-SIP-95-1 – Condition V.6 (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in

units of the applicable emissions standard.

- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 003-01	Emission unit name: MEK-TOL	List any control devices associated with this emission unit: N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3

and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

EWVI shall demonstrate compliance with sections 3, 4 and 5 of 45CSR10 by testing and /or monitoring in accordance with one or more of the following: 40 CFR Part 60, Appendix A, Method 6, Method 15, continuous emissions monitoring systems (CEMS) or fuel sampling and analysis as set forth in an approved monitoring plan for each emission unit.

[45 CSR 10-8.2.c; 45CSR13 - Permit R13-2334 - 4.1.14]

Testing:

N/A

Recordkeeping:

EWVI shall maintain an on-site record of all required monitoring data as established in a monitoring plan pursuant to 45CSR 10-8.2.c. Such records shall be made available to the Director upon request. Records shall be retained on-site for a minimum of five years.

[45 CSR 10-8.3.a; 45 CSR 13 – Permit R13-2334 – 4.4.4]

EWVI shall maintain records of the operating schedule and the quantity and quality of fuel consumed in each unit in a manner specified by the Director. Such records shall be maintained on-site and made available to the Director upon request.

[45 CSR 10-8.3.c; 45 CSR 13 - Permit R13-2334 – 4.4.5]

Reporting:

EWVI shall submit a periodic exception report to the Director, in a manner specified by the Director. Such an exception report shall provide details of all excursions outside the range of measured emissions or monitored parameters established in an approved monitoring plan and shall include the time of the excursion, the magnitude of the excursion, the duration of the excursion, the cause of the excursion, and the corrective action taken.

[45 CSR 10-8.3.b; 45 CSR 13 – Permit R13-2334 – 4.5.2]

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for

in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

N/A

Testing:

EWVI shall conduct a performance test to determine NOx emissions rate limits. Such performance test shall be conducted in accordance with an approved EPA method and shall be performed during the operating condition of combusting the maximum amount of refinery fuel gas within the natural gas/refinery fuel gas mixture feasible at the time of the test (with the understanding that the maximum percentage of refinery fuel gas within the mixture could be as high as 100%). At least 30 days prior to testing, EWVI shall submit a test protocol subject to approval by the Director.

[45 CSR 13 – Permit R13-2334 – 4.3.3]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with the emissions limits, EWVI shall keep monthly records of the amount of fuel gas (refinery plus natural gas) consumed within the heater. This information, along with appropriate emission factors from *EPA's Supplement D, Chapter 1.4*, may be used to estimate monthly emissions of all pollutants except SO₂. Compliance with the yearly limit shall be based on a 12-month rolling total.

[45 CSR 13 – Permit R13-2334 – 4.4.10 (H-201, H-500S and H-600S)]

Reporting:

N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

EWVI shall have installed and shall calibrate, maintain, and operate a continuous emission monitoring system as herein provided to measure the concentration of hydrogen sulfide in all refinery fuel gas streams. Installation, calibration, maintenance, and operation of such continuous emission monitoring system shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7. The Director may approve the installation of sulfur dioxide and oxygen monitoring systems to monitor sulfur dioxide emissions in the exhaust gases from combustion units firing refinery fuel gas in lieu of a hydrogen sulfide monitoring system for the fuel gas streams. Such SO₂ and oxygen monitoring systems shall be subject to the performance specifications, quality assurance procedures, and other related requirements under 40 CFR Part 60.

[CO-SIP-95-1 – Condition V.6 (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No
If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 005-01	Emission unit name: H-600S	List any control devices associated with this emission unit: N/A
---	--------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
H600 Series Heaters, ISOMAX Unit; refinery fuel gas/natural gas blend

Manufacturer: Econotherm	Model number: Not Available	Serial number: H-601 – J70-827, H-602 – J70-828, H-603 – J70-829, H-604 – J70-830
------------------------------------	---------------------------------------	--

Construction date: 03/01/1972	Installation date: 04/01/1972	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
41.6 MMBtu/hr

Maximum Hourly Throughput: 40,784 cf/hr	Maximum Annual Throughput: 357.25 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 41.6 MMBtu/hr	Type and Btu/hr rating of burners: Traditional NOx Burner 41.6 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Refinery Fuel Gas/Natural Gas Blend
Max Hourly Usage = 40,784 cf/hr
Max Annual Usage = 357 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Refinery Fuel Gas/ Natural Gas Blend	0.016%	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	3.43	15.00
Nitrogen Oxides (NO _x)	3.99	21.44
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.31	1.36
Particulate Matter (PM ₁₀)	0.31	1.36
Total Particulate Matter (TSP)	0.31	1.36
Sulfur Dioxide (SO ₂)	1.10	4.83
Volatile Organic Compounds (VOC)	0.22	0.98
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

The emission factors for PM, CO, and VOC were obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

The emission factor for SO₂ is based on 160 ppm H₂S limit, based on 40 CFR 60, Subpart J limitations.

The emission factor for NO_x is based on performance testing.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11, 4.1.12, 4.1.13 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.25 - R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3

and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

EWVI shall demonstrate compliance with sections 3, 4 and 5 of 45CSR10 by testing and /or monitoring in accordance with one or more of the following: 40 CFR Part 60, Appendix A, Method 6, Method 15, continuous emissions monitoring systems (CEMS) or fuel sampling and analysis as set forth in an approved monitoring plan for each emission unit.

[45 CSR 10-8.2.c; 45CSR13 - Permit R13-2334 - 4.1.14]

Testing:

N/A

Recordkeeping:

EWVI shall maintain an on-site record of all required monitoring data as established in a monitoring plan pursuant to 45CSR 10-8.2.c. Such records shall be made available to the Director upon request. Records shall be retained on-site for a minimum of five years.

[45 CSR 10-8.3.a; 45 CSR 13 – Permit R13-2334 – 4.4.4]

EWVI shall maintain records of the operating schedule and the quantity and quality of fuel consumed in each unit in a manner specified by the Director. Such records shall be maintained on-site and made available to the Director upon request.

[45 CSR 10-8.3.c; 45 CSR 13 - Permit R13-2334 – 4.4.5]

Reporting:

EWVI shall submit a periodic exception report to the Director, in a manner specified by the Director. Such an exception report shall provide details of all excursions outside the range of measured emissions or monitored parameters established in an approved monitoring plan and shall include the time of the excursion, the magnitude of the excursion, the duration of the excursion, the cause of the excursion, and the corrective action taken.

[45 CSR 10-8.3.b; 45 CSR 13 – Permit R13-2334 – 4.5.2]

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for

in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

N/A

Testing:

EWVI shall conduct a performance test to determine NOx emissions rate limits. Such performance test shall be conducted in accordance with an approved EPA method and shall be performed during the operating condition of combusting the maximum amount of refinery fuel gas within the natural gas/refinery fuel gas mixture feasible at the time of the test (with the understanding that the maximum percentage of refinery fuel gas within the mixture could be as high as 100%). At least 30 days prior to testing, EWVI shall submit a test protocol subject to approval by the Director.

[45 CSR 13 – Permit R13-2334 – 4.3.3]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with the emissions limits, EWVI shall keep monthly records of the amount of fuel gas (refinery plus natural gas) consumed within the heater. This information, along with appropriate emission factors from *EPA's Supplement D, Chapter 1.4*, may be used to estimate monthly emissions of all pollutants except SO₂. Compliance with the yearly limit shall be based on a 12-month rolling total.

[45 CSR 13 – Permit R13-2334 – 4.4.10 (H-201, H-500S and H-600S)]

Reporting:

N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

EWVI shall have installed and shall calibrate, maintain, and operate a continuous emission monitoring system as herein provided to measure the concentration of hydrogen sulfide in all refinery fuel gas streams. Installation, calibration, maintenance, and operation of such continuous emission monitoring system shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7. The Director may approve the installation of sulfur dioxide and oxygen monitoring systems to monitor sulfur dioxide emissions in the exhaust gases from combustion units firing refinery fuel gas in lieu of a hydrogen sulfide monitoring system for the fuel gas streams. Such SO₂ and oxygen monitoring systems shall be subject to the performance specifications, quality assurance procedures, and other related requirements under 40 CFR Part 60.

[CO-SIP-95-1 – Condition V.6 (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No
If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 005-02	Emission unit name: H-441	List any control devices associated with this emission unit: N/A
---	-------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Hydrogen Plant Heater; natural gas

Manufacturer: Not Available	Model number: Not Available	Serial number: Not Available
---------------------------------------	---------------------------------------	--

Construction date: 03/01/1972	Installation date: 04/01/1972	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
12.3 MMBtu/hr

Maximum Hourly Throughput: 12,059 cf/hr	Maximum Annual Throughput: 105.63 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 12.3 MMBtu/hr	Type and Btu/hr rating of burners: Traditional NOx Burner 12.3 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Natural Gas
Max Hourly Usage = 12,059 cf/hr
Max Annual Usage = 105.63 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Natural Gas	20 gr/100 cf	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	1.01	4.44
Nitrogen Oxides (NO _x)	1.21	5.28
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.09	0.40
Particulate Matter (PM ₁₀)	0.09	0.40
Total Particulate Matter (TSP)	0.09	0.40
Sulfur Dioxide (SO ₂)	0.01	0.03
Volatile Organic Compounds (VOC)	0.07	0.29
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

The emission factors for PM, CO, VOC, and NO_x were obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

H-441 is fired on natural gas only; therefore the SO₂ emission factor from AP-24 Table 1.4-2 (0.00059 lb/MMBtu) is used.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.22 - R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – Sections 4.1.23 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3

and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

N/A

Testing:

N/A

Recordkeeping:

N/A

Reporting:

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

N/A

Testing:

N/A

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with the emission limits, EWVI shall keep monthly records of the amount of natural gas consumed in the heater. This information along with appropriate emission factors from *EPA's AP-42 Fifth Edition*,

Volume I, Supplement D, Chapter 1.4 may be used to estimate monthly emissions.

[45 CSR 13 – Permit R13-2334 – 4.4.9 (H-701 and H-441)]

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

Any source for which compliance with sulfur dioxide emissions limitations are not demonstrated using continuous emission monitoring systems, must demonstrate compliance not less frequently than semi-annually with the limit of 50 grains per 100 dry standard cubic feet of gas, using reference emissions test procedures in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19. At least three test runs, each with sufficient samples to characterize a two-hour period representative of normal source operation, shall be required for each compliance demonstration using 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19. The semi-annual tests shall be scheduled as ordered by or in consultation with the Director.

[CO-SIP-95-1 – Condition V.1 (SIPed)]

Testing:

N/A

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control

equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 006-01	Emission unit name: H-701	List any control devices associated with this emission unit: N/A
---	-------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
VFU Heater; natural gas

Manufacturer: John Zink	Model number: CoolStar 211-PC	Serial number: JZS019026480
-----------------------------------	---	---------------------------------------

Construction date: 10/01/1982	Installation date: 06/01/1983	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
12.1 MMBtu/hr

Maximum Hourly Throughput: 11,863 cf/hr	Maximum Annual Throughput: 103.91 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 12.1 MMBtu/hr	Type and Btu/hr rating of burners: Traditional NOx Burner 12.1 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Natural Gas
Max Hourly Usage = 11,863 cf/hr
Max Annual Usage = 103.91 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Natural Gas	20 gr/100 cf	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	1.00	4.36
Nitrogen Oxides (NO _x)	0.24	1.06
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.09	0.39
Particulate Matter (PM ₁₀)	0.09	0.39
Total Particulate Matter (TSP)	0.09	0.39
Sulfur Dioxide (SO ₂)	0.01	0.03
Volatile Organic Compounds (VOC)	0.07	0.29
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

The emission factors for PM, CO, VOC, and NO_x were obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

H-701 is fire on natural gas only; therefore the SO₂ emission factor from AP-24 Table 1.4-2 (0.00059 lb/MMBtu) is used.

Low NO_x emission factor is based on the burner spec (0.02 lb/MMBtu).

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.22 - R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – Sections 4.1.23, 4.1.24, 4.1.26 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3

and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with the emission limits, EWVI shall keep monthly records of the amount of natural gas consumed in the two heaters. This information, along with appropriate emission factors from *EPA's AP-42 Fifth*

Edition, Volume I, Supplement D, Chapter 1.4 may be used to estimate monthly emissions.
[45 CSR 13 – Permit R13-2334 – 4.4.9 (H-701 and H-441)]

Reporting:
N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

Any source for which compliance with sulfur dioxide emissions limitations are not demonstrated using continuous emission monitoring systems, must demonstrate compliance not less frequently than semi-annually with the limit of 50 grains per 100 dry standard cubic feet of gas, using reference emissions test procedures in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19. At least three test runs, each with sufficient samples to characterize a two-hour period representative of normal source operation, shall be required for each compliance demonstration using 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19. The semi-annual tests shall be scheduled as ordered by or in consultation with the Director.

[CO-SIP-95-1 – Condition V.1 (SIPed)]

Upon entry of CO-SIP-95-1, compliance with the sulfur dioxide emission limitations shall be determined daily in accordance with the following provisions:

- A. Total daily sulfur dioxide emissions for each heater shall be calculated by adding the sulfur dioxide emissions attributable to each fuel fired during all twenty-four (24) hour periods.
- B. Sulfur dioxide emissions attributable to the combustion of fuel oil shall be determined by sampling and analyzing the volume of fuel oil fired for sulfur content and heating volume in accordance with applicable ASTM sampling and analytical methods and accurately measuring the volume and mass of fuel oil fired in each heater.
- C. Sulfur dioxide emissions attributable to the combustion of fuel gas shall be determined using continuous hydrogen sulfide monitoring data collected in accordance with 40 CFR 60 in conjunction with daily determinations of fuel gas heating value and density and accurate daily measurements of the volume of fuel gas fired in each heater.
- D. Fuel mass or volumetric flow metering equipment shall be installed and placed into continuous operations on or before June 1, 1995.

[CO-SIP-95-1 – Condition V.4 (SIPed)(During fuel oil combustion only)]

All continuous emission monitoring data required to be collected shall be quality assured in accordance with 40 CFR Part 60, Appendix F Quality Assurance Procedures.

[CO-SIP-95-1 – Condition V.7 (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Sources of sulfur dioxide emissions subject to CO-SIP-95-1 shall demonstrate compliance with the limit of 50 grains per 100 dry standard cubic feet of gas using data collected in accordance with this section and reference emissions test procedures in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19.

[CO-SIP-95-1 – Condition V.8 (SIPed)]

Any source for which compliance with sulfur dioxide emissions limitations are not demonstrated using continuous emission monitoring systems, must demonstrate compliance with the limit of 50 grains per 100 dry standard cubic feet of gas not less frequently than semi-annually. At least three test runs, each with sufficient samples to characterize a two-hour period representative of normal source operation, shall be required for each compliance demonstration using the reference test procedures specified in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19.

[CO-SIP-95-1 – Condition V.9 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No
If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 007-01	Emission unit name: Boiler A	List any control devices associated with this emission unit: N/A
---	--	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Boiler A; refinery fuel gas/natural gas blend

Manufacturer: Foster Wheeler Ltd	Model number: AG 5150	Serial number: 5214
--	---------------------------------	-------------------------------

Construction date: 03/01/1971	Installation date: 04/01/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
159.50 MMBtu/hr

Maximum Hourly Throughput: 156,373 cf/hr	Maximum Annual Throughput: 1,370 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 159.5 MMBtu/hr	Type and Btu/hr rating of burners: Next Generation Ultra Low NOx Burner 159.5 MMBtu/hr
--	---

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Refinery Fuel Gas/Natural Gas Blend
Max Hourly Usage = 156,373 cf/hr
Max Annual Usage = 1,370 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Refinery Fuel Gas/ Natural Gas Blend	0.016%	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	13.13	57.53
Nitrogen Oxides (NO _x)	9.25	40.52
Lead (Pb)		
Particulate Matter (PM _{2.5})	1.19	5.21
Particulate Matter (PM ₁₀)	1.19	5.21
Total Particulate Matter (TSP)	1.19	5.21
Sulfur Dioxide (SO ₂)	0.92	4.03
Volatile Organic Compounds (VOC)	0.86	3.77
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

The emission factors for PM, VOC, and CO were obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

The SO₂ emission factor is based on a blend of 20% Refinery Fuel Gas (RFG) and 80% Natural Gas (NG). For RFG, the emission rate is calculated as follows (using 160 vppm H₂S): Emission Factor (lb SO₂/MMBtu = (160 mol H₂S/10E6 mol RFG) x (1 mol SO₂/1 mol H₂S) x (64 lb SO₂/mol SO₂) x (mol RFG/379 SCF) x (SCF RFG/1,020 Btu) x (10E6 Btu/MMBtu) = 0.0265 lb SO₂/MMBtu. An emission factor of 0.00059 lb/MMBtu is used for natural gas.

The NO_x emission factor of 0.058 lb/MMBtu is based on CEMS data. Boiler A was re-rated when the low NO_x burner was added.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11, 4.1.12, 4.1.13 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.16 - R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – Sections 4.1.17, 4.1.18 – R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – V.11.D – NOx emissions from Boiler A shall be limited to 0.058 lb/MMBtu on a 3-hour average as demonstrated by actual performance indicated by CEMS data.

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

EWVI shall monitor compliance with 45CSR§2-3 in an approved monitoring plan (see Appendix A) for each emission unit. Such plans shall include, but not be limited to, one or more of the following: continuous measurement of emissions, monitoring of emission control equipment, periodic parametric monitoring, or such other monitoring as approved by the Director.

[45 CSR 2-8.2.; 45CSR13 - Permit R13-2334 - 4.1.15]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3 and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

EWVI shall demonstrate compliance with sections 3, 4 and 5 of 45CSR10 by testing and /or monitoring in accordance with one or more of the following: 40 CFR Part 60, Appendix A, Method 6, Method 15, continuous emissions monitoring systems (CEMS) or fuel sampling and analysis as set forth in an approved monitoring plan for each emission unit.

[45 CSR 10-8.2.c; 45CSR13 - Permit R13-2334 - 4.1.14]

Testing:

N/A

Recordkeeping:

EWVI shall maintain an on-site record of all required monitoring data as established in a monitoring plan pursuant to 45CSR 10-8.2.c. Such records shall be made available to the Director upon request. Records shall be retained on-site for a minimum of five years.

[45 CSR 10-8.3.a; 45 CSR 13 – Permit R13-2334 – 4.4.4]

EWVI shall maintain records of the operating schedule and the quantity and quality of fuel consumed in each unit in a manner specified by the Director. Such records shall be maintained on-site and made available to the Director upon request.

[45 CSR 10-8.3.c; 45 CSR 13 - Permit R13-2334 – 4.4.5]

Reporting:

EWVI shall submit a periodic exception report to the Director, in a manner specified by the Director. Such an

exception report shall provide details of all excursions outside the range of measured emissions or monitored parameters established in an approved monitoring plan and shall include the time of the excursion, the magnitude of the excursion, the duration of the excursion, the cause of the excursion, and the corrective action taken.

[45 CSR 10-8.3.b; 45 CSR 13 – Permit R13-2334 – 4.5.2]

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

N/A

Testing:

At the request of the Director, EWVI shall conduct a performance test of Boilers A and B to determine NO_x emissions rate limits. Such performance test shall be conducted in accordance with an approved EPA method and shall be performed during the operating condition of combusting the maximum amount of refinery fuel gas within the natural gas/refinery fuel gas mixture feasible at the time of the test (with the understanding the maximum percentage of refinery fuel gas within the mixture could be as high as 20%). At least 30 days prior to testing, EWVI shall submit a test protocol subject to approval by the Director.

[45 CSR 13 – Permit R13-2334 – 4.3.1 (Boilers A and B)]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with the emission limits set forth for Boiler A and Boiler B, EWVI shall keep monthly records of the amount of fuel gas (refinery plus natural gas) consumed within the two boilers, individually. This information, along with appropriate emission factors from EPA's Supplement D, Chapter 1.4, may be used to estimate monthly emissions of all pollutants except SO₂. Compliance with the yearly limit shall be based on a 12-month rolling total. Compliance with this limit shall demonstrate compliance with the less stringent requirement of CO-SIP-95-1 – Condition IV.3.A. (SIPed) and 45 CSR 10-3.1.e.

[45 CSR 13 – Permit R13-2334 – 4.4.6, CO-SIP-95-1 – Condition IV.3.A (SIPed) and 45 CSR 10-3.1.e]

Reporting:

N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

On or after June 1, 1995, compliance with the sulfur dioxide emission limitations for gas-fired boiler Nos. A and B shall be demonstrated in accordance with the following provisions:

- A. Co-located continuous monitoring systems (for sulfur dioxide and oxygen) shall be installed, calibrated, maintained, and operated to measure the concentration of sulfur dioxide and oxygen in the combustion gases discharged from these boilers. The continuous monitoring systems and programs shall comply with the following provisions under 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.45(c), (e), (f), Part 60.46(b)(4), Part 60; Appendix A, Methods 6, 6A, and 6B, Part 60; Appendix B, Performance Specification 2, Part 60, Appendix B, Performance Specification 3. All continuous emission monitoring data required to be collected shall be quality assured in accordance with 40 CFR Part 60, Appendix F Quality Assurance Procedures.

- B. Following installation of the continuous monitoring system, compliance shall be determined based upon a rolling three (3) hour average of measured sulfur dioxide concentrations and procedures approved by the Director to calculate hourly mass emissions.
- C. During any period after June 1, 1995 in which either of these boilers is operated without its continuous emission monitoring system in proper operation, EWVI shall fire only natural gas or desulfurized refinery fuel gas in the boiler.

[CO-SIP-95-1 – Condition V.3 (SIPed) (During fuel oil combustion only)]

EWVI shall have installed and shall calibrate, maintain, and operate a continuous emission monitoring system as herein provided to measure the concentration of hydrogen sulfide in all refinery fuel gas streams. Installation, calibration, maintenance, and operation of such continuous emission monitoring system shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7. The Director may approve the installation of sulfur dioxide and oxygen monitoring systems to monitor sulfur dioxide emissions in the exhaust gases from combustion units firing refinery fuel gas in lieu of a hydrogen sulfide monitoring system for the fuel gas streams. Such SO₂ and oxygen monitoring systems shall be subject to the performance specifications, quality assurance procedures, and other related requirements under 40 CFR Part 60.

[CO-SIP-95-1 – Condition V.6 (SIPed)]

All continuous emission monitoring data required to be collected shall be quality assured in accordance with 40 CFR Part 60, Appendix F Quality Assurance Procedures.

[CO-SIP-95-1 – Condition V.7 (SIPed)]

Continuous monitoring systems for NO_x shall be installed, calibrated, maintained, and operated to measure the concentration of NO_x in the combustion gases discharged from these boilers. The continuous monitoring systems and programs shall comply with the applicable requirements of 40 CFR Part 60. Following installation of the continuous monitoring system, compliance shall be determined based upon a rolling three (3) hour average of measured NO_x concentrations and procedures approved by the Director to calculate hourly mass emissions.

[CO-SIP-95-1 – Condition V.11.D (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Sources of sulfur dioxide emissions subject to CO-SIP-95-1 shall demonstrate compliance with the limit of 50 grains per 100 dry standard cubic feet of gas using data collected in accordance with this section and reference emissions test procedures in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19.

[CO-SIP-95-1 – Condition V.8 (SIPed)]

Any source for which compliance with sulfur dioxide emissions limitations are not demonstrated using continuous emission monitoring systems, must demonstrate compliance with the limit of 50 grains per 100 dry standard cubic feet of gas not less frequently than semi-annually. At least three test runs, each with sufficient samples to characterize a two-hour period representative of normal source operation, shall be required for each compliance demonstration using the reference test procedures specified in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19.

[CO-SIP-95-1 – Condition V.9 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and

performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 007-02	Emission unit name: Boiler B	List any control devices associated with this emission unit: N/A

	PPH	TPY
<p>List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).</p> <p>The emission factors for PM, VOC, and CO were obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.</p> <p>The SO₂ emission factor is based on a blend of 20% Refinery Fuel Gas (RFG) and 80% Natural Gas (NG). For RFG, the emission rate is calculated as follows (using 160 vppm H₂S): Emission Factor (lb SO₂/MMBtu = (160 mol H₂S/10E6 mol RFG) x (1 mol SO₂/1 mol H₂S) x (64 lb SO₂/mol SO₂) x (mol RFG/379 SCF) x (SCF RFG/1,020 Btu) x (10E6 Btu/MMBtu) = 0.0265 lb SO₂/MMBtu. An emission factor of 0.00059 lb/MMBtu is used for natural gas.</p> <p>The NO_x emission factor of 0.058 lb/MMBtu is based on CEMS data. Boiler B has been de-rated to match Boiler A</p> <p>*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.</p>		

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11, 4.1.12, 4.1.13 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.16 - R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – Sections 4.1.17, 4.1.18 – R13-2334M

Applicable Requirement – CO-SIP-95

Limitations – V.11.D – NOx emissions from Boiler B shall be limited to 0.058 lb/MMBtu on a 3-hour average as demonstrated by actual performance indicated by CEMS data.

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

EWVI shall monitor compliance with 45CSR§2-3 in an approved monitoring plan (see Appendix A) for each emission unit. Such plans shall include, but not be limited to, one or more of the following: continuous measurement of emissions, monitoring of emission control equipment, periodic parametric monitoring, or such other monitoring as approved by the Director.

[45 CSR 2-8.2.; 45CSR13 - Permit R13-2334 - 4.1.15]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3 and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

EWVI shall demonstrate compliance with sections 3, 4 and 5 of 45CSR10 by testing and /or monitoring in accordance with one or more of the following: 40 CFR Part 60, Appendix A, Method 6, Method 15, continuous emissions monitoring systems (CEMS) or fuel sampling and analysis as set forth in an approved monitoring plan for each emission unit.

[45 CSR 10-8.2.c; 45CSR13 - Permit R13-2334 - 4.1.14]

Testing:

N/A

Recordkeeping:

EWVI shall maintain an on-site record of all required monitoring data as established in a monitoring plan pursuant to 45CSR 10-8.2.c. Such records shall be made available to the Director upon request. Records shall be retained on-site for a minimum of five years.

[45 CSR 10-8.3.a; 45 CSR 13 – Permit R13-2334 – 4.4.4]

EWVI shall maintain records of the operating schedule and the quantity and quality of fuel consumed in each unit in a manner specified by the Director. Such records shall be maintained on-site and made available to the Director upon request.

[45 CSR 10-8.3.c; 45 CSR 13 - Permit R13-2334 – 4.4.5]

Reporting:

EWVI shall submit a periodic exception report to the Director, in a manner specified by the Director. Such an

exception report shall provide details of all excursions outside the range of measured emissions or monitored parameters established in an approved monitoring plan and shall include the time of the excursion, the magnitude of the excursion, the duration of the excursion, the cause of the excursion, and the corrective action taken.

[45 CSR 10-8.3.b; 45 CSR 13 – Permit R13-2334 – 4.5.2]

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

N/A

Testing:

At the request of the Director, EWVI shall conduct a performance test of Boilers A and B to determine NO_x emissions rate limits. Such performance test shall be conducted in accordance with an approved EPA method and shall be performed during the operating condition of combusting the maximum amount of refinery fuel gas within the natural gas/refinery fuel gas mixture feasible at the time of the test (with the understanding the maximum percentage of refinery fuel gas within the mixture could be as high as 20%). At least 30 days prior to testing, EWVI shall submit a test protocol subject to approval by the Director.

[45 CSR 13 – Permit R13-2334 – 4.3.1 (Boilers A and B)]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with the emission limits set forth for Boiler A and Boiler B, EWVI shall keep monthly records of the amount of fuel gas (refinery plus natural gas) consumed within the two boilers, individually. This information, along with appropriate emission factors from EPA's Supplement D, Chapter 1.4, may be used to estimate monthly emissions of all pollutants except SO₂. Compliance with the yearly limit shall be based on a 12-month rolling total. Compliance with this limit shall demonstrate compliance with the less stringent requirement of CO-SIP-95-1 – Condition IV.3.A. (SIPed) and 45 CSR 10-3.1.e.

[45 CSR 13 – Permit R13-2334 – 4.4.6, CO-SIP-95-1 – Condition IV.3.A (SIPed) and 45 CSR 10-3.1.e]

Reporting:

N/A

CO-SIP-95

Monitoring:

Compliance with the emission limitations of CO-SIP-95-1 shall be based upon the averaging time and compliance determination methods below:

On or after June 1, 1995, compliance with the sulfur dioxide emission limitations for gas-fired boiler Nos. A and B shall be demonstrated in accordance with the following provisions:

- A. Co-located continuous monitoring systems (for sulfur dioxide and oxygen) shall be installed, calibrated, maintained, and operated to measure the concentration of sulfur dioxide and oxygen in the combustion gases discharged from these boilers. The continuous monitoring systems and programs shall comply with the following provisions under 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.45(c), (e), (f), Part 60.46(b)(4), Part 60; Appendix A, Methods 6, 6A, and 6B, Part 60; Appendix B, Performance Specification 2, Part 60, Appendix B, Performance Specification 3. All continuous emission monitoring data required to be collected shall be quality assured in accordance with 40 CFR Part 60, Appendix F Quality Assurance Procedures.

- B. Following installation of the continuous monitoring system, compliance shall be determined based upon a rolling three (3) hour average of measured sulfur dioxide concentrations and procedures approved by the Director to calculate hourly mass emissions.
- C. During any period after June 1, 1995 in which either of these boilers is operated without its continuous emission monitoring system in proper operation, EWVI shall fire only natural gas or desulfurized refinery fuel gas in the boiler.

[CO-SIP-95-1 – Condition V.3 (SIPed) (During fuel oil combustion only)]

EWVI shall have installed and shall calibrate, maintain, and operate a continuous emission monitoring system as herein provided to measure the concentration of hydrogen sulfide in all refinery fuel gas streams. Installation, calibration, maintenance, and operation of such continuous emission monitoring system shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7. The Director may approve the installation of sulfur dioxide and oxygen monitoring systems to monitor sulfur dioxide emissions in the exhaust gases from combustion units firing refinery fuel gas in lieu of a hydrogen sulfide monitoring system for the fuel gas streams. Such SO₂ and oxygen monitoring systems shall be subject to the performance specifications, quality assurance procedures, and other related requirements under 40 CFR Part 60.

[CO-SIP-95-1 – Condition V.6 (SIPed)]

All continuous emission monitoring data required to be collected shall be quality assured in accordance with 40 CFR Part 60, Appendix F Quality Assurance Procedures.

[CO-SIP-95-1 – Condition V.7 (SIPed)]

Continuous monitoring systems for NO_x shall be installed, calibrated, maintained, and operated to measure the concentration of NO_x in the combustion gases discharged from these boilers. The continuous monitoring systems and programs shall comply with the applicable requirements of 40 CFR Part 60. Following installation of the continuous monitoring system, compliance shall be determined based upon a rolling three (3) hour average of measured NO_x concentrations and procedures approved by the Director to calculate hourly mass emissions.

[CO-SIP-95-1 – Condition V.11.D (SIPed)]

Testing:

During any period of failure or malfunction of the hydrogen sulfide continuous emission monitoring system, H₂S concentrations of the refinery fuel gas shall be determined by collection of not less than two (2) gas samples per eight (8) hour period which are analyzed by gas chromatography for hydrogen sulfide content, density and heating value in accordance with ASTM Method D-1945. EWVI may request approval by the Director of alternative sampling and analytical methods for determination of these parameters during periods when the H₂S monitoring system has failed or malfunctioned.

[CO-SIP-95-1 – Condition V.11 (SIPed)]

Sources of sulfur dioxide emissions subject to CO-SIP-95-1 shall demonstrate compliance with the limit of 50 grains per 100 dry standard cubic feet of gas using data collected in accordance with this section and reference emissions test procedures in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19.

[CO-SIP-95-1 – Condition V.8 (SIPed)]

Any source for which compliance with sulfur dioxide emissions limitations are not demonstrated using continuous emission monitoring systems, must demonstrate compliance with the limit of 50 grains per 100 dry standard cubic feet of gas not less frequently than semi-annually. At least three test runs, each with sufficient samples to characterize a two-hour period representative of normal source operation, shall be required for each compliance demonstration using the reference test procedures specified in 40 CFR Part 60, Appendix A, Methods 6, 6A, 6B, and 19.

[CO-SIP-95-1 – Condition V.9 (SIPed)]

Recordkeeping:

EWVI shall maintain records of the occurrence and duration of any start-up, shut-down, or malfunction in the operation of sources subject to CO-SIP-95-1, any malfunction of air pollution control equipment or any periods during which a continuous monitoring system or device is inoperative.

[CO-SIP-95-1 – Condition VI.4 (SIPed)]

EWVI shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous

monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by CO-SIP-95-1 or otherwise by the Director.

[CO-SIP-95-1 – Condition VI.5 (SIPed)]

Reporting:

EWVI shall submit an excess emissions and monitoring systems performance report to the Director for all sources for which EWVI is required to maintain and operate a continuous monitoring system or monitoring device for sulfur dioxide or hydrogen sulfide on a calendar monthly basis. All such reports shall be submitted by the 30th day following the end of each calendar month and shall contain the results of all determinations showing excess emissions regardless of whether the determinations are made by continuous monitoring data or by other methods established by CO-SIP-95-1. Written reports of excess emissions shall include the following information:

- A. The magnitude of excess emissions computed in accordance with 40 CFR 60.13(h), any conversion factor(s) used, the date and time at which the excess emissions started and ended for each occurrence of excess emissions and the process operating time during the reporting period.
- B. Specific identification of each period of excess emissions that occurred during start-ups, shut-downs, and malfunctions of the affected facility. Each malfunction report filed with the Director shall be referenced by report number with the date of occurrence and date of report submission noted.
- C. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- D. When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

If the total duration of excess emissions during the reporting period is less than one percent (1%) of the total operating time for the reporting period, and downtime for the continuous monitoring system for the reporting period is less than five percent (5%) of the total operating time for the reporting period, only the summary report form listed as Figure 1 in 40 CFR Part 60.7(d) shall be submitted, and the excess emission report described above need not be submitted unless requested by the Director. If the total duration of excess emissions for the reporting period is one percent (1%) or greater of the total operating time for the reporting period, or the total continuous system downtime for the reporting period is five percent (5%) or greater of the total operating time for the reporting period, the summary report form and the excess emission report described above shall both be submitted to the Director.

[CO-SIP-95-1 – Condition VI.3 (SIPed)]

EWVI shall report to the Director, by telephone or telefax, any malfunction of such source or its air pollution control equipment which results in any excess sulfur dioxide emission rate or concentration within twenty-four (24) hours of becoming aware of such condition. EWVI shall file a written report concerning the malfunction with the Director within ten (10) days, providing the following information:

- A. A detailed explanation of the factors involved or causes of the malfunction.
- B. The date and time of duration (with starting and ending times) of the period of excess emissions.
- C. An estimate of the mass of excess emissions discharged during the malfunction period.
- D. The maximum emission rate or concentration measured or otherwise determined during the malfunction in units of the applicable emissions standard.
- E. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction.
- F. A detailed explanation of the corrective measure or program that shall be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[CO-SIP-95-1 – Condition VI.7 (SIPed)]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 007-03	Emission unit name: Boiler C	List any control devices associated with this emission unit: N/A
---	--	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Boiler C; natural gas

Manufacturer: Todd Construction	Model number: V5MG0XXX	Serial number: 1293
---	----------------------------------	-------------------------------

Construction date: MM/DD/2000	Installation date: MM/DD/2000	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
95 MMBtu/hr

Maximum Hourly Throughput: 93,137 cf/hr	Maximum Annual Throughput: 815.84 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 95 MMBtu/hr	Type and Btu/hr rating of burners: Traditional NOx Burner 95 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Natural Gas
Max Hourly Usage = 93,137 cf/hr
Max Annual Usage = 815.8 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Natural Gas	20 gr/100 cf	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	7.82	34.26
Nitrogen Oxides (NO _x)	4.75	20.80
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.71	3.10
Particulate Matter (PM ₁₀)	0.71	3.10
Total Particulate Matter (TSP)	0.71	3.10
Sulfur Dioxide (SO ₂)	0.06	0.24
Volatile Organic Compounds (VOC)	0.51	2.24
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

The emission factors for PM, VOC, and CO were obtained from U.S. EPA Document AP-42, "Compilation of Air Pollutant Emission Factors, Volume I: Stationary and Area Sources," Office of Air Quality Planning and Standards, Research Triangle Park, NC.

Boiler C is fired on natural gas only; therefore the SO₂ emission factor from AP-42 Table 1.4-2 (0.00059 lb/MMBtu) is used.

The NO_x emission factor is the maximum emission rate allowed under Section V.11.B of the Consent Decree. Performance testing indicates a NO_x emission rate of 0.042 lb/MMBtu.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement - 45 CSR 2
Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M
- Applicable Requirement - 45 CSR 10
Limitations – Sections 4.1.10, 4.1.11 - R13-2334M
- Applicable Requirement - 45 CSR 13
Limitations – Sections 4.1.6, 4.1.19, 4.1.20 - R13-2334M
- Applicable Requirement – 45 CSR 16
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3

and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

N/A

Testing:

EWVI shall conduct a performance test for NO_x. The results shall be based upon the average of three (3) one hour testing periods in accordance with EPA methods at 40 CFR 60 Appendix A.

[45 CSR 13 – Permit R13-2334 – 4.3.2 (Boiler C and Heater 101)]

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

To determine compliance with emission limits, EWVI shall keep monthly records of the amount of natural gas consumed within Boiler C and the hours of operation. This information, along with appropriate emission factors from EPA's AP-42 Fifth Edition, Volume I, Supplement D: Stationary Point and Area Sources (AP-42), Chapter 1.4, may be used to estimate monthly emissions of all pollutants except NOx. The emission factor for NOx shall be obtained from the Global Consent Decree (Civil No. 3:03CV114010S), which sets a limit of 0.050 lb/MMBtu. Compliance with the yearly limit shall be based on a 12-month rolling total.

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 009-01	Emission unit name: T Load	List any control devices associated with this emission unit: N/A
---	--------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Truck Loading

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: 03/01/1972	Installation date: 04/01/1972	Modification date(s): MM/DD/1998
---	---	--

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
344,620 Mgal/yr

Maximum Hourly Throughput: 47,208,219 gal/hr	Maximum Annual Throughput: 344, 620 Mgal/yr	Maximum Operating Schedule: 8,760 hr/yr
--	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data - Emissions are routed to the thermal oxidizer.		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement - 40 CFR 63
Limitations – Sections 5.1.12 – R13-2334M
- Applicable Requirement - 45 CSR 6
Limitations – Sections 5.1.1, 5.1.2, 5.1.3, 5.1.12 – R13-2334M
- Applicable Requirement - 45 CSR 13
Limitations – Sections 5.1.1, 5.1.2, 5.1.3, 5.1.6, 5.1.12 – R13-2334M
- Applicable Requirement – 45 CSR 34
Limitations – Sections 5.1.12 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

To determine compliance with the monthly emission rate limits, EWVI may estimate emissions using the monthly crude charge records along with the appropriate emission factors for flaring from AP-42, Chapter 5.1 (1/95). Compliance with the yearly limit shall be based on a 12-month rolling total.

[45 CSR 13 - Permit R13-2334 - 5.2.2]

EWVI shall install, calibrate, certify, operate, and maintain, according to the manufacturer's specifications, a continuous monitoring system (CMS). Where a thermal oxidation system is used, a continuous parameter monitoring system (CPMS) capable of measuring temperature shall be installed in the firebox or in the ductwork immediately downstream from the firebox in a position before any substantial heat exchange occurs. Monitoring an alternative operating parameter or a parameter of a vapor processing system other than those listed in this paragraph will be allowed upon demonstrating to the Administrator's satisfaction that the alternative parameter demonstrates continuous compliance with the emission standard in Section 5.1.12.(b) or Section 7.1.8.(a)(3)(ii) of this permit.

[40 CFR 63.427(a) and 63.650(a); and 45 CSR 34-2.1; 45 CSR 13 - Permit R13-2334 - 5.2.3]

EWVI shall operate the vapor processing system in a manner not to go below the operating parameter value for the parameter described in Section 5.2.3. of this permit, and established using the procedures in 40 C.F.R. §63.425(b). In cases where an alternative parameter pursuant to Section 5.2.3. of this permit is approved, EWVI shall operate the vapor processing system in a manner not to exceed or not to go below, as appropriate, the alternative operating parameter value. Operation of the vapor processing system in a manner exceeding or going below the operating parameter value, as specified above, shall constitute a violation of the emission standard in 40 C.F.R. § 63.422(b).

[40 CFR 63.427(b) and 63.650(a); and 45 CSR 34-2.1; 45 CSR 13 - Permit R13-2334 - 5.2.4]

Testing:

N/A

Recordkeeping:

To determine compliance with emission limits set forth in Section 5.1.6. and 5.1.13., EWVI shall keep a monthly record of the volume and type of each product/product type loaded at each truck loading station and whether or not the VOC emissions were controlled using the loading rack thermal oxidizer. AP-42 emission factors for flares and transportation and marketing of petroleum liquids (Chapter 5.2, 1/95) may be used to estimate emissions. A control efficiency of 95% may be used for emissions estimations at times when the loading rack thermal oxidizer is being utilized to control emissions from loading.

[45 CSR 13 - Permit R13-2334 - 5.4.1]

To determine compliance with the annual benzene emission limit set forth in Section 5.1.6., EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of benzene present in petroleum liquids processed and transported at the facility. The following equation shall be to determine monthly and yearly emissions.

$$\text{Benzene Emissions (tpm or tpy)} = (\text{Total VOCs (tpm or tpy)}) \times (\text{Actual Benzene Vapor Weight \%})$$

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45 CSR 13 - Permit R13-2334 - 5.4.2]

EWVI shall keep records of the test results for each gasoline cargo tank loading at the facility in accordance with the requirements listed in 40 C.F.R. § 63.428(b).

[40 CFR 63.428(b), 63.650(a), 63.654(b); and 45 CSR 34-2.1; 45 CSR 13 - Permit R13-2334 - 5.4.3]

EWVI shall:

- (1) Keep an up-to-date, readily accessible record of the continuous monitoring data required under 40 C.F.R. § 63.427(a). This record shall indicate the time intervals during which loadings of gasoline cargo tanks have occurred or, alternatively, shall record the operating parameter data only during such loadings. The date and time of day shall also be indicated at reasonable intervals on this record.
- (2) Record and report simultaneously with the notification of compliance status required under 40 C.F.R. § 63.9(h):
 - (i) All data and calculations, engineering assessments, and manufacturer's recommendations used in determining the operating parameter value under 40 C.F.R. § 63.425(b); and
 - (ii) The following information when using a flare under provisions of 40 C.F.R. § 63.11(b) to comply with 40 C.F.R. § 63.422(b): Flare design (i.e., steam-assisted, air-assisted, or non-assisted); and all visible emissions readings, heat content determinations, flow rate measurements, and exit velocity determinations made during the compliance determination required under § 63.425(a).
- (3) If EWVI requests approval to use a vapor processing system or monitor an operating parameter other than those specified in 40 C.F.R. § 63.427(a), EWVI shall submit a description of planned reporting and record keeping procedures. The Administrator will specify appropriate reporting and record keeping requirements as part of the review of the permit application.

[40 CFR 63.428(c), 63.650(a), 63.654(b); and 45 CSR 34-2.1; 45CSR13 - Permit R13-2334 - 5.4.4]

Reporting:

Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)	3.23	14.15
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

Emissions estimations were based on calculations from the Foster Wheeler Report issued in 1997. That report was updated in 2000 and emissions were prorated based on the installation of roofs on the north and south API units.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Rule – 40 CFR 60

Standards – 40 CFR 60.692-1, 60.692-2, 60.692-3, 60.692-4, 60.692-5, 60.692-6, 60.692-7, 60.693-1, 60.693-2, 60.694

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

40 CFR Part 60 Subpart QQQ

Monitoring:

(a) Each owner or operator subject to the provisions of this subpart shall install, calibrate, maintain, and operate according to manufacturer's specifications the following equipment, unless alternative monitoring procedures or requirements are approved for that facility by the Administrator.

- (1) Where a thermal incinerator is used for VOC emission reduction, a temperature monitoring device equipped with a continuous recorder shall be used to measure the temperature of the gas stream in the combustion zone of the incinerator.
- (2) The temperature monitoring device shall have an accuracy of ± 1 percent of the temperature being measured, expressed in $^{\circ}\text{C}$, or $\pm 0.5^{\circ}\text{C}$ (0.9°F), whichever is greater.
- (3) Where a catalytic incinerator is used for VOC emission reduction, temperature monitoring devices, each equipped with a continuous recorder shall be used to measure the temperature in the gas stream immediately before and after the catalyst bed of the incinerator. The temperature monitoring devices shall have an accuracy of ± 1 percent of the temperature being measured, expressed in $^{\circ}\text{C}$, or $\pm 0.5^{\circ}\text{C}$ (0.9°F), whichever is greater.
- (4) Where a carbon adsorber is used for VOC emissions reduction, a monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of the control device outlet gas stream or inlet and outlet gas stream shall be used.
 - (i) For a carbon adsorption system that regenerates the carbon bed directly onsite, a monitoring device that continuously indicates and records the volatile organic compound concentration level or reading of organics in the exhaust gases of the control device outlet gas stream or inlet and outlet gas stream shall be used.
 - (ii) For a carbon adsorption system that does not regenerate the carbon bed directly onsite in the control device (e.g., a carbon canister), the concentration level of the organic compounds in the exhaust vent stream from the carbon adsorption system shall be monitored on a regular schedule, and the existing carbon shall be replaced with fresh carbon immediately when carbon breakthrough is indicated. The device shall be monitored on a daily basis or at intervals no greater than 20 percent of the design carbon replacement interval, whichever is greater. As an alternative to conducting this monitoring, an owner or operator may replace the carbon in the carbon adsorption system with fresh carbon at a regular predetermined time interval that is less than the carbon replacement interval that is determined by the maximum design flow rate and organic concentration in the gas stream vented to the carbon adsorption system.
- (5) Where a flare is used for VOC emission reduction, the owner or operator shall comply with the monitoring requirements of 40 CFR 60.18(f)(2).

(b) Where a VOC recovery device other than a carbon adsorber is used to meet the requirements specified in §60.692-5(a), the owner or operator shall provide to the Administrator information describing the operation of the control device and the process parameter(s) that would indicate proper operation and maintenance of the device. The Administrator may request further information and will specify appropriate monitoring procedures or requirements.

(c) An alternative operational or process parameter may be monitored if it can be demonstrated that another parameter will ensure that the control device is operated in conformance with these standards and the control device's design specifications.

[40 CFR 60.695]

Testing:

(a) Before using any equipment installed in compliance with the requirements of § 60.692-2, § 60.692-3, § 60.692-4, § 60.692-5, or § 60.693, EWVI shall inspect such equipment for indications of potential emissions, defects, or other problems that may cause the requirements of this subpart not to be met. Points of inspection shall include, but are not limited to, seals, flanges, joints, gaskets, hatches, caps, and plugs.

(b) The owner or operator of each source that is equipped with a closed vent system and control device as required in § 60.692-5 (other than a flare) is exempt from § 60.8 of the General Provisions and shall use Method 21 to measure the emission concentrations, using 500 ppm as the no detectable emission limit. The instrument shall be calibrated each day before using.

The calibration gases shall be:

- (1) Zero air (less than 10 ppm of hydrocarbon in air), and
- (2) A mixture of either methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppm methane or n-hexane.

(c) EWVI shall conduct a performance test initially, and at other times as requested by the Administrator, using the test methods and procedures in § 60.18(f) to determine compliance of flares.

(d) After installing the control equipment required to meet § 60.693-2(a) or whenever sources that have ceased to treat refinery wastewater for a period of 1 year or more are placed back into service, EWVI shall determine compliance with the standards in § 60.693-2(a) as follows:

- (1) The maximum gap widths and maximum gap areas between the primary seal and the separator wall and between the secondary seal and the separator wall shall be determined individually within 60 calendar days of the initial installation of the floating roof and introduction of refinery wastewater or 60 calendar days after the equipment is placed back into service using the following procedure when the separator is filled to the design operating level and when the roof is floating off the roof supports.
 - (i) Measure seal gaps around the entire perimeter of the separator in each place where a 0.32 cm (0.125 in.) diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the separator and measure the gap width and perimetrical distance of each such location.
 - (ii) The total surface area of each gap described in (d)(1)(i) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the wall to the seal and multiplying each such width by its respective perimetrical distance.
 - (iii) Add the gap surface area of each gap location for the primary seal and the secondary seal individually, divide the sum for each seal by the nominal perimeter of the separator basin and compare each to the maximum gap area as specified in § 60.693-2.
- (2) The gap widths and total gap area shall be determined using the procedure in paragraph (d)(1) of this section according to the following frequency:
 - (i) For primary seals, once every 5 years.
 - (ii) For secondary seals, once every year.

[40 CFR 60.696]

Recordkeeping:

(a) EWVI shall comply with the record keeping requirements of this section. All records shall be retained for a period of 2 years after being recorded unless otherwise noted.

(b)

- (1) For individual drain systems subject to § 60.692-2, the location, date, and corrective action shall be recorded for each drain when the water seal is dry or otherwise breached, when a drain cap or plug is missing or improperly installed, or other problem is identified that could result in VOC emissions, as determined during the initial and periodic visual or physical inspection.
- (2) For junction boxes subject to § 60.692-2, the location, date, and corrective action shall be recorded for inspections required by § 60.692-2(b) when a broken seal, gap, or other problem is identified that could result in VOC emissions.
- (3) For sewer lines subject to §§ 60.692-2 and 60.693-1(e), the location, date, and corrective action shall be recorded for inspections required by §§ 60.692-2(c) and 60.693-1(e) when a problem is identified that could result in VOC emissions.

(c) For oil-water separators subject to § 60.692-3, the location, date, and corrective action shall be recorded for inspections required by § 60.692-3(a) when a problem is identified that could result in VOC emissions.

(d) For closed vent systems subject to § 60.692-5 and completely closed drain systems subject to § 60.693-1, the location, date, and corrective action shall be recorded for inspections required by § 60.692-5(e) during which detectable emissions are measured or a problem is identified that could result in VOC emissions.

(e)

- (1) If an emission point cannot be repaired or corrected without a process unit shutdown, the expected date of a successful repair shall be recorded.
- (2) The reason for the delay as specified in § 60.692-6 shall be recorded if an emission point or equipment problem is not repaired or corrected in the specified amount of time.
- (3) The signature of the owner or operator (or designee) whose decision it was that repair could not be effected without refinery or process shutdown shall be recorded.
- (4) The date of successful repair or corrective action shall be recorded.

(f)

- (1) A copy of the design specifications for all equipment used to comply with the provisions of this subpart shall be kept for the life of the source in a readily accessible location.
- (2) The following information pertaining to the design specifications shall be kept.
 - (i) Detailed schematics, and piping and instrumentation diagrams.
 - (ii) The dates and descriptions of any changes in the design specifications.
- (3) The following information pertaining to the operation and maintenance of closed drain systems and closed vent systems shall be kept in a readily accessible location.
 - (i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions shall be kept for the life of the facility. This documentation is to include a general description of the gas streams that enter the control device, including flow and volatile organic compound content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816°C (1,500°F) is used to meet the 95-percent requirement, documentation that those conditions exist is sufficient to meet the requirements of this paragraph.
 - (ii) For a carbon adsorption system that does not regenerate the carbon bed directly onsite in the control device such as a carbon canister, the design analysis shall consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis shall also establish the design exhaust vent stream organic compound concentration level, capacity of carbon bed, type and working capacity of activated carbon used for carbon bed, and design carbon replacement interval based on the total carbon working capacity of the control device and source operating schedule.
 - (iii) Periods when the closed vent systems and control devices required in § 60.692 are not operated as designed, including periods when a flare pilot does not have a flame shall be recorded and kept for 2 years after the information is recorded.
 - (iv) Dates of startup and shutdown of the closed vent system and control devices required in § 60.692 shall be recorded and kept for 2 years after the information is recorded.
 - (v) The dates of each measurement of detectable emissions required in §§ 60.692, 60.693, or 60.692-5 shall be recorded and kept for 2 years after the information is recorded.
 - (vi) The background level measured during each detectable emissions measurement shall be recorded and kept for 2 years after the information is recorded.
 - (vii) The maximum instrument reading measured during each detectable emission measurement shall be recorded and kept for 2 years after the information is recorded.
- (4) Each owner or operator of an affected facility that uses a thermal incinerator shall maintain continuous records of the temperature of the gas stream in the combustion zone of the incinerator and records of all 3-hour periods of operation during which the average temperature of the gas stream in the combustion zone is more than 28 °C (50 °F) below the design combustion zone temperature, and shall keep such records for 2 years after the information is recorded.
- (5) Each owner or operator of an affected facility that uses a catalytic incinerator shall maintain continuous records of the temperature of the gas stream both upstream and downstream of the catalyst bed of the incinerator, records of all 3- hour periods of operation during which the average temperature measured before the catalyst bed is more than 28°C (50 °F) below the design gas stream temperature, and records of all 3-hour periods during which the average temperature difference across the catalyst bed is less than 80 percent of the design temperature difference, and shall keep such records for 2 years after the information is recorded.
 - (i) Each owner or operator of an affected facility that uses a carbon adsorber shall maintain continuous records of the VOC concentration level or reading of organics of the control device outlet gas stream or inlet and outlet gas stream and records of all 3-hour periods of operation

during which the average VOC concentration level or reading of organics in the exhaust gases, or inlet and outlet gas stream, is more than 20 percent greater than the design exhaust gas concentration level, and shall keep such records for 2 years after the information is recorded.

(A) Each owner or operator of an affected facility that uses a carbon adsorber which is regenerated directly onsite shall maintain continuous records of the volatile organic compound concentration level or reading of organics of the control device outlet gas stream or inlet and outlet gas stream and records of all 3-hour periods of operation during which the average volatile organic compound concentration level or reading of organics in the exhaust gases, or inlet and outlet gas stream, is more than 20 percent greater than the design exhaust gas concentration level, and shall keep such records for 2 years after the information is recorded.

(B) If a carbon adsorber that is not regenerated directly onsite in the control device is used, then the owner or operator shall maintain records of dates and times when the control device is monitored, when breakthrough is measured, and shall record the date and time that the existing carbon in the control device is replaced with fresh carbon.

(g) If an owner or operator elects to install a tightly sealed cap or plug over a drain that is out of active service, the owner or operator shall keep for the life of a facility in a readily accessible location, plans or specifications which indicate the location of such drains.

(h) For stormwater sewer systems subject to the exclusion in § 60.692-1(d)(1), an owner or operator shall keep for the life of the facility in a readily accessible location, plans or specifications which demonstrate that no wastewater from any process units or equipment is directly discharged to the stormwater sewer system.

(i) For ancillary equipment subject to the exclusion in § 60.692-1(d)(2), an owner or operator shall keep for the life of a facility in a readily accessible location, plans or specifications which demonstrate that the ancillary equipment does not come in contact with or store oily wastewater.

(j) For non-contact cooling water systems subject to the exclusion in § 60.692-1(d)(3), an owner or operator shall keep for the life of the facility in a readily accessible location, plans or specifications which demonstrate that the cooling water does not contact hydrocarbons or oily wastewater and is not recirculated through a cooling tower.

(k) For oil-water separators subject to § 60.693-2, the location, date, and corrective action shall be recorded for inspections required by §§ 60.693-2(a)(1)(iii)(A) and (B), and shall be maintained for the time period specified in paragraphs (k)(1) and (2) of this section.

(1) For inspections required by § 60.693-2(a)(1)(iii)(A), ten years after the information is recorded.

(2) For inspections required by § 60.693-2(a)(1)(iii)(B), two years after the information is recorded.

[40 CFR 60.697]

Reporting:

(a) An owner or operator electing to comply with the provisions of § 60.693 shall notify the Administrator of the alternative standard selected in the report required in § 60.7.

(b)

(1) Each owner or operator of a facility subject to this subpart shall submit to the Administrator within 60 days after initial startup a certification that the equipment necessary to comply with these standards has been installed and that the required initial inspections or tests of process drains, sewer lines, junction boxes, oil-water separators, and closed vent systems and control devices have been carried out in accordance with these standards. Thereafter, the owner or operator shall submit to the Administrator semiannually a certification that all of the required inspections have been carried out in accordance with these standards.

(2) Each owner or operator of an affected facility that uses a flare shall submit to the Administrator within 60 days after initial startup, as required under § 60.8(a), a report of the results of the performance test required in § 60.696(c).

(c) A report that summarizes all inspections when a water seal was dry or otherwise breached, when a drain cap or plug was missing or improperly installed, or when cracks, gaps, or other problems were identified that could result in VOC emissions, including information about the repairs or corrective action taken, shall be submitted initially and semiannually thereafter to the Administrator.

(d) As applicable, a report shall be submitted semiannually to the Administrator that indicates:

(1) Each 3-hour period of operation during which the average temperature of the gas stream in the combustion zone of a thermal incinerator, as measured by the temperature monitoring device, is more than 28 °C (50 °F) below the design combustion zone temperature,

(2) Each 3-hour period of operation during which the average temperature of the gas stream immediately before the catalyst bed of a catalytic incinerator, as measured by the temperature monitoring device, is more than 28 °C (50°F) below the design gas stream temperature, and any 3-hour period during which the average temperature difference across the catalyst bed (i.e., the difference between the temperatures of the gas stream immediately before and after the catalyst bed), as measured by the temperature monitoring device, is less than 80 percent of the design temperature difference, or,

- (3) Each 3-hour period of operation during which the average VOC concentration level or reading of organics in the exhaust gases from a carbon adsorber is more than 20 percent greater than the design exhaust gas concentration level or reading.
- (i) Each 3-hour period of operation during which the average volatile organic compound concentration level or reading of organics in the exhaust gases from a carbon adsorber which is regenerated directly onsite is more than 20 percent greater than the design exhaust gas concentration level or reading.
 - (ii) Each occurrence when the carbon in a carbon adsorber system that is not regenerated directly onsite in the control device is not replaced at the predetermined interval specified in § 60.695(a)(3)(ii).

(e) If compliance with the provisions of this subpart is delayed pursuant to § 60.692-7, the notification required under 40 CFR 60.7(a)(4) shall include the estimated date of the next scheduled refinery or process unit shutdown after the date of notification and the reason why compliance with the standards is technically impossible without a refinery or process unit shutdown.

[40 CFR 60.698]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 00B-02	Emission unit name: EQLEAKS	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Equipment Leak Fugitives

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: N/A	Installation date: N/A	Modification date(s): N/A
----------------------------------	----------------------------------	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
N/A

Maximum Hourly Throughput: N/A	Maximum Annual Throughput: N/A	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value

Volatile Organic Compounds (VOC)	0.004	0.01
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

Emission factors obtained from EPA AP-42, Chapter 1.4, Natural Gas Combustion, Supplement D, July 1998.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (*Note: Title V permit condition numbers alone are not the underlying applicable requirements*). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (*Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.*)

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 00D-02	Emission unit name: Still	List any control devices associated with this emission unit: N/A
---	-------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Glycol Dehydration Still

Manufacturer: Westfield	Model number: Not Available	Serial number: 091-005
-----------------------------------	---------------------------------------	----------------------------------

Construction date: MM/DD/1991	Installation date: MM/DD/1991	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
N/A

Maximum Hourly Throughput: 480 gal/hr	Maximum Annual Throughput: 4,204,800 gal/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)	0.19	0.70
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Benzene	0.05	0.20
Toluene	.11	0.40
Xylenes	0.03	0.10
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

The still vent emissions were estimated using the mass balance information below.

VOC from Rich Glycol = VOC from Lean Glycol + VOC to the still vent
Based on a sampling event:
VOC from Rich Glycol = 0.022%
VOC from Lean Glycol = 0.018%
Flow Rate (gpm) = 8
Glycol Density (lbs/gal) = 8.32

HAPs were estimated using a mass balance.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: EPN 01	Emission unit name: H-901	List any control devices associated with this emission unit: N/A
---	-------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
DHT Heater; refinery fuel gas/natural gas blend

Manufacturer: Zeeko Inc.	Model number: GISF-13 Round Flare	Serial number: 15046
------------------------------------	---	--------------------------------

Construction date: MM/DD/2005	Installation date: MM/DD/2005	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
27.5 MMBtu/hr

Maximum Hourly Throughput: 26,961 cf/hr	Maximum Annual Throughput: 236.16 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	---	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 27.5 MMBtu/hr	Type and Btu/hr rating of burners: Next Generation Ultra Low NOx Burner 27.5 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Refinery Fuel Gas/Natural Gas Blend
Max Hourly Usage = 26,961 cf/hr
Max Annual Usage = 236.16 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Refinery Fuel Gas/ Natural Gas Blend	0.016%	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	0.96	4.22
Nitrogen Oxides (NO _x)	0.69	3.01
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.18	0.79
Particulate Matter (PM ₁₀)	0.18	0.79
Total Particulate Matter (TSP)	0.18	0.79
Sulfur Dioxide (SO ₂)	0.62	2.72
Volatile Organic Compounds (VOC)	0.28	1.20
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY
<p>List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).</p> <p>Emission factors were obtained from manufacturer's data (based on HHV of 1,160 Btu/scf).</p>		

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11, 4.1.12, 4.1.13 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.27 - R13-2334M

Applicable Requirement – 45 CSR 16

Limitations – Sections 4.1.33, 4.1.34 – R13-2334M

Applicable Requirement – 45 CSR 34

Limitations – Sections 4.1.28, 4.1.29, 4.1.30, 4.1.31, 4.1.32 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c.; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3 and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

Compliance with the hydrogen sulfide concentration limit of 230 mg/dscm (0.10 gr/dscf) shall be demonstrated using a continuous emission monitoring system which shall comply with the following provisions of 40 CFR Part 60: Part 60.13(a), (c), (d)(1), (e)(2), (f), (g), (h), (i), (j), Part 60.105(a)(4), Part 60.106(e) part 60, Appendix A, Method 11, Part 60; Appendix B, Performance Specification 7.

[45 CSR 13 – Permit R13-2334 – 4.2.2]

EWVI shall demonstrate compliance with sections 3, 4 and 5 of 45CSR10 by testing and /or monitoring in accordance with one or more of the following: 40 CFR Part 60, Appendix A, Method 6, Method 15, continuous emissions monitoring systems (CEMS) or fuel sampling and analysis as set forth in an approved monitoring plan for each emission unit.

[45 CSR 10-8.2.c; 45CSR13 - Permit R13-2334 - 4.1.14]

Testing:

N/A

Recordkeeping:

EWVI shall maintain an on-site record of all required monitoring data as established in a monitoring plan pursuant to 45CSR 10-8.2.c. Such records shall be made available to the Director upon request. Records shall be retained on-site for a minimum of five years.

[45 CSR 10-8.3.a; 45 CSR 13 – Permit R13-2334 – 4.4.4]

EWVI shall maintain records of the operating schedule and the quantity and quality of fuel consumed in each unit in a manner specified by the Director. Such records shall be maintained on-site and made available to the Director upon request.

[45 CSR 10-8.3.c; 45 CSR 13 - Permit R13-2334 – 4.4.5]

Reporting:

EWVI shall submit a periodic exception report to the Director, in a manner specified by the Director. Such an exception report shall provide details of all excursions outside the range of measured emissions or monitored parameters established in an approved monitoring plan and shall include the time of the excursion, the magnitude of the excursion, the duration of the excursion, the cause of the excursion, and the corrective action taken.

[45 CSR 10-8.3.b; 45 CSR 13 – Permit R13-2334 – 4.5.2]

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

EWVI shall monitor the amount of fuel gas consumed in H-901 using flow meters.

[45 CSR 13 - Permit R13-2334 - 4.2.5]

Testing:

N/A

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

EWVI shall keep monthly records of the amount of refinery fuel gas consumed by H-901. To determine compliance with NO_x, SO₂, VOC, and CO emissions limits for the H-901, emission factors from manufacturer's specifications along with fuel gas consumption may be used. To determine compliance with the PM emission limits, AP-42 emission factors Table 1.4.-2 (1998) along with fuel gas consumption data may be used. Said records shall be maintained on-site for a period of five (5) years. Said records shall be made available to the Director of the Division of Air Quality or his/her duly authorized representative upon request and shall be certified by a responsible official upon the submittal.

[45 CSR 13 - Permit R13-2334 -4.4.13]

EWVI shall maintain continuous record for the H₂S concentration in the refinery fuel gas consumed by H-901. Said records shall be maintained on-site for a period of five (5) years. Said records shall be made available to the Director of the Division of Air Quality or his/her duly authorized representative upon request and shall be certified by a responsible official upon the submittal.

[45 CSR 13 - Permit R13-2334 - 4.4.14]

Reporting:

N/A

45 CSR 16

Monitoring:

Compliance with the hydrogen sulfide concentration limit for H-901 of permit condition 4.1.34. shall be demonstrated using the continuous monitor as follows:

- (a) An instrument for continuous monitoring and recording the concentration (dry basis) of H₂S in fuel gases before being burned in any fuel gas combustion device.
 - (i) The span value for this instrument is 425 mg/dscm H₂S.
 - (ii) Fuel gas combustion devices having a common source of fuel gas may be monitored at only one location if monitoring at this location accurately represents the concentration of H₂S in the fuel gas being burned.
 - (iii) The performance evaluations for this H₂S monitor under 40 CFR 60.13(c) shall use Performance Specification 7. Method 11, 15, 15A, or 16 shall be used for conducting the relative accuracy evaluations.

[40 C.F.R.§§ 60.105(a)(4)(i), (ii), and (iii) and 45CSR§16-4.1; 45CSR13 - Permit R13-2334 - 4.2.3]

Testing:

The facility must conduct performance tests required in 40 C.F.R. §60.8 for H-901, EWVI shall use as reference

methods and procedures the test methods in Appendix A of 40 C.F.R. 60 or other methods and procedures as specified in this section, except as provided in 40 C.F.R. § 60.8(b).

[40 C.F.R. §60.106(a) and 45CSR§16-4.1; 45CSR13 - Permit R13-2334 - 4.3.6]

The facility shall demonstrate compliance with the H₂S standard in 40 C.F.R. § 60.104(a)(1) for H-901 as follows:

Where emissions are monitored by 40 C.F.R. § 60.105(a)(3), compliance with 40 C.F.R. § 60.104(a)(1) shall be determined using Method 6 or 6C and Method 3 or 3A. A 1-hour sample shall constitute a run. Method 6 samples shall be taken at a rate of approximately 2 liters/min. The ppm correction factor (Method 6) and the sampling location in paragraph (f)(1) of the section apply. Method 4 shall be used to determine the moisture content of the gases. The sampling point for Method 4 shall be adjacent to the sampling point for Method 6 or 6C.

[40 C.F.R. § 60.106(e)(2) and 45CSR§16-4.1; 45CSR13 – Permit R13-2334 - 4.3.7]

Recordkeeping:

For any periods for which sulfur dioxide or oxides emissions data are not available, EWVI shall submit a signed statement indicating if any changes were made in operation of the emission control system during the period of data unavailability which could affect the ability of the system to meet the applicable emission limit. Operations of the control system and affected facility during periods of data unavailability are to be compared with operation of the control system and affected facility before and following the period of data unavailability.

[40 C.F.R. § 60.107(d) and 45CSR§16-4.1; 45CSR13 – Permit R13-2334 - 4.4.12]

Reporting:

For any periods for which sulfur dioxide or oxides emissions data are not available for H-901, EWVI shall submit a signed statement indicating if any changes were made in operation of the emission control system during the period of data unavailability which could affect the ability of the system to meet the applicable emission limit. Operations of the control system and affected facility during periods of data unavailability are to be compared with operation of the control system and affected facility before and following the period of data unavailability.

[40 C.F.R. § 60.107(d) and 45CSR§16-4.1;45CSR13 - Permit R13-2334 - 4.5.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: EPN 03	Emission unit name: H-1101	List any control devices associated with this emission unit: N/A
---	--------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Hydrogen Plant Heater; natural gas

Manufacturer: Callidus	Model number: Not Available	Serial number: B0706994B
----------------------------------	---------------------------------------	------------------------------------

Construction date: MM/DD/2005	Installation date: MM/DD/2005	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
38.8 MMBtu/hr

Maximum Hourly Throughput: 38,039 cf/hr	Maximum Annual Throughput: 333 MMcf/yr	Maximum Operating Schedule: 8,760 hr/yr
---	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input checked="" type="checkbox"/> Direct Fired
--	---

Maximum design heat input and/or maximum horsepower rating: 38.8 MMBtu/hr	Type and Btu/hr rating of burners: Next Generation Ultra Low NOx Burner 38.8 MMBtu/hr
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.

Natural Gas
Max Hourly Usage = 38,039 cf/hr
Max Annual Usage = 333 MMcf/yr

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
Natural Gas	20 gr/100 cf	N/A	1,020 Btu/cf

<i>Emissions Data</i>		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)	0.39	1.70
Nitrogen Oxides (NO _x)	1.55	6.80
Lead (Pb)		
Particulate Matter (PM _{2.5})	0.39	1.70
Particulate Matter (PM ₁₀)	0.39	1.70
Total Particulate Matter (TSP)	0.39	1.70
Sulfur Dioxide (SO ₂)	0.01	0.06
Volatile Organic Compounds (VOC)	0.19	1.25
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).
Emissions factors were obtained from manufacturer's guarantees.

*For the purposes of Title V Permitting, it is assumed that PM_{2.5}=PM₁₀=TSP.

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement - 45 CSR 2

Limitations – Sections 4.1.1, 4.1.3, 4.1.4, 4.1.7, 4.1.8, 4.1.9 - R13-2334M

Applicable Requirement - 45 CSR 10

Limitations – Sections 4.1.10, 4.1.11 - R13-2334M

Applicable Requirement - 45 CSR 13

Limitations – Sections 4.1.6, 4.1.27, 4.1.35 - R13-2334M

Applicable Requirement – 45 CSR 34

Limitations – Sections 4.1.28, 4.1.29, 4.1.30, 4.1.31, 4.1.32 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

45 CSR 2

Monitoring:

Visual emission checks of each emission point subject to an opacity limit shall be conducted during periods of normal facility operation for a sufficient time interval to determine if the unit has visible emissions using 40 CFR 60 Appendix A, Method 22. If natural gas is being combusted, the visual emissions checks shall be conducted monthly. If fuel oil is being combusted, the visual emissions checks shall be conducted weekly. If visible emissions are identified during the survey, or at any other time, EWVI shall take corrective action to minimize the emissions immediately. If during these checks, or at any other time, visible emissions are observed, a visible emission evaluation shall be conducted in accordance with 40 CFR 60 Appendix A, Method 9. A Method 9 evaluation shall not be required if the visible emission condition is corrected in a timely manner. A record of each visible emission check required above shall be maintained on site for a period of no less than five (5) years. Said record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirement, the results of the check, what action(s), if any, was/were taken, the name of the observer, and any data required by 40 CFR 60 Appendix A, Method 22 or Method 9.

[45 CSR 13 - Permit R13-2334 - 4.2.1]

Testing:

N/A

Recordkeeping:

EWVI shall maintain a periodic exception report for each unit. Such reports shall include, but may not be limited to the date and time of start-ups and shutdowns. All such requirements, including notification by telephone, telefax, or other such method determined by the Director, shall be deemed to be satisfied when the reports are maintained on site for a period of no less than five (5) years and shall be made available upon request to the Director or his/her duly authorized representative.

[45 CSR 2-8.3.b.; 45 CSR 13 - Permit R13-2334 - 4.4.2]

EWVI shall maintain records of the operating schedule and the quantity of fuel consumed in each fuel burning unit monthly, at a minimum, but may record it more often at their discretion.

[45 CSR 2-8.3.c; 45 CSR 13 – Permit R13-2334 – 4.4.3]

Reporting:

EWVI shall report to the Director any malfunction of such unit or its air pollution control equipment which results in any excess particulate matter emission rate or excess opacity (i.e., emissions exceeding the standards in 45CSR§§2-3

and 4) as provided in one of the following subdivisions:

- a. Excess opacity periods meeting the following conditions may be reported on a quarterly basis unless otherwise required by the Director:
 1. The excess opacity period does not exceed thirty (30) minutes within any 24-hour period; and
 2. Excess opacity does not exceed 40%.
- b. EWVI shall report to the Director any malfunction resulting in excess particulate matter or excess opacity, not meeting the criteria set forth in 45CSR§2-9.3.a, by telephone, telefax, or e-mail by the end of the next business day after becoming aware of such condition. EWVI shall file a certified written report concerning the malfunction with the Director within thirty (30) days providing the following information:
 1. A detailed explanation of the factors involved or causes of the malfunction;
 2. The date and time of duration (with starting and ending times) of the period of excess emissions;
 3. An estimate of the mass of excess emissions discharged during the malfunction period;
 4. The maximum opacity measured or observed during the malfunction;
 5. Immediate remedial actions taken at the time of the malfunction to correct or mitigate the effects of the malfunction; and
 6. A detailed explanation of the corrective measures or program that will be implemented to prevent a recurrence of the malfunction and a schedule for such implementation.

[45 CSR 2-9.3; 45 CSR 13 – Permit R13-2334 – 4.5.1]

The addition of sulfur oxides to a combustion unit exit gas stream for the purpose of improving emissions control equipment efficiency shall be reviewed by the Director. No person shall cause, suffer, allow or permit the addition of sulfur oxides as described above unless written approval for such addition is provided by the Director.

[45 CSR 2-4.4; 45CSR13 - Permit R13-2334 - 4.1.2]

45 CSR 10

Monitoring:

N/A

Testing:

N/A

Recordkeeping:

N/A

Reporting:

Due to unavoidable malfunction of equipment or inadvertent fuel shortages, emissions exceeding those provided for in 45CSR10 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the equipment malfunction or fuel shortage. In cases of major equipment failure or extended shortages of conforming fuels, additional time periods may be granted by the Director provided a corrective program has been submitted by EWVI and approved by the Director.

[45 CSR 10-9.1 and 45 CSR 13 - Permit R13-2334 - 4.1.5]

45 CSR 13

Monitoring:

EWVI shall monitor the amount of natural gas consumed in H-1101 using flow meters.

[45CSR13 -Permit R13-2334 - 4.2.4]

Testing:

N/A

Recordkeeping:

Recordkeeping:

EWVI shall document the frequency, length of time, amount of fuel oil consumed, and estimate of emissions during DOT maintenance and periods of natural gas curtailment in which fuel oil was combusted. EWVI shall keep records of the sulfur content of all fuel oil received for the purpose of combustion. Each batch of fuel oil shall have its sulfur content determined by test method, ASTM D4294. This information, along with appropriate emission factors from *EPA's AP-42 Fifth Edition, Volume I, Supplement E, Chapter 1.3*, may be used to estimate emissions.

[45 CSR 13 – R13-2334 – 4.4.1]

EWVI shall keep monthly records of the amount of natural gas consumed by H-1101. To determine compliance with the NO_x, SO₂, and CO emission limits for H-1101, EWVI may use manufacturer's specifications and natural gas consumption. To determine compliance with the VOC and PM emission limit, natural gas consumption data and AP-42 Table 1.4-2 (1998) using an average gas high heating value (HHV) of 1,020 BTU/scf may be used. Said records shall be maintained on-site for a period of five (5) years. Said records shall be made available to the Director of the Division of Air Quality or his/her duly authorized representative upon request and shall be certified by a responsible official upon the submittal.

[45CSR13 -Permit R13-2334 - 4.4.15]

Reporting:

N/A

45 CSR 34

Monitoring:

N/A

Testing:

The facility must conduct initial performance test for CO for H-901 and H-1101 according to 40 C.F.R. §§63.7(c), (d), and (h), 40 C.F.R. § 63.7510(c), Table 5 of Subpart DDDDD for H-901 and H-1101.

[40 C.F.R. §§ 63.7520(a), (b) and 45CSR§34-4.1; 45CSR13 - Permit R13-2334 - 4.3.4]

The facility must complete annual performance for carbon monoxide according to 40 C.F.R. § 63.7520. Each annual performance test for H-901 and H-1101 must be conducted between 10 and 12 months after previous performance test.

[40 C.F.R. § 63.7515(e) and 45CSR§34-4.1; 45CSR13 - Permit R13-2334 - 4.3.5]

Recordkeeping:

Heater H-901 and H-1101 must keep records according to paragraphs (a) through (c) of this section.

- a. A copy of each notification and report that you submitted to comply with 40 CFR 63, Subpart DDDDD, including all documentation supporting any Initial Notification or Notification of Compliance Status or semiannual compliance report that you submitted, according to the requirements in 40 CFR 63.10(b)(2)(xiv).
- b. The records in 40 CFR 63(e)(3)(iii) through (v) related to startup, shutdown, and malfunction.
- c. Records of performance tests, fuel analyses, or other compliance demonstrations, performance evaluations, and opacity observations as required in 40 CFR 63.10(b)(2)(viii).

[40 C.F.R. §§ 63.7555(a)(1), (2), and (3) and 45CSR§34-4.1; 45CSR13 - Permit R13-2334 -4.4.16]

Reporting:

EWVI must submit all of the notifications in 40 C.F.R. §§ 63.7(b) and (c), 63.8(e), (f)(4) and (6), and 40 C.F.R. §§ 63.9(b) through (h) that apply to the facility by the dates specified in these sections.

[40 C.F.R. § 63.7545(a) and 45CSR§34-4.1; 45CSR13 - R13-2334 - 4.5.5]

EWVI must submit a Notification of Intent to conduct a performance test at least 30 days before the performance test is scheduled to begin.

[40 C.F.R. § 63.7545(d) and 45CSR§34-4.1; 45CSR13 – Permit R13-2334 - 4.5.6.]

EWVI must conduct an initial compliance demonstration as specified in 40 C.F.R. § 63.7530(a), EWVI must submit a Notification of Compliance Status according to 40 C.F.R. § 63.9(h)(2)(ii). For each initial compliance demonstration, EWVI must submit the Notification of Compliance Status, including all performance test results and fuel analyses, before the close of business on the 60th day following the completion of the performance test and/or other initial compliance demonstrations according to 40 C.F.R. §63.10(d)(2). The Notification of Compliance Status report must contain all the information specified in 40 C.F.R. §§ 63.7545(e)(1) through (9), as applicable.

[40 C.F.R. § 63.7545(e) and 45CSR§34-4.1; 45CSR13 -Permit R13-2334 - 4.5.7.]

The compliance report must contain the information required in 4.5.10.(a) through (k).

- a. Company name and address.
- b. Statement by a responsible official with that official's name, title, and signature, certifying the truth, accuracy, and completeness of the content of the report.
- c. Date of report and beginning and ending dates of the reporting period.

- d. The total fuel use by each affected source subject to an emission limit, for each calendar month within the semiannual reporting period, including, but not limited to, a description of the fuel and the total fuel usage amount with units of measure.
- e. The summary of the results of the annual performance tests and documentation of any operating limits that were reestablished during this test, if applicable.
- f. A signed statement indicating that you burned no new types of fuel. Or, if the facility did burn a new type of fuel, you must submit the calculation of chlorine input, using Equation 5 of 40 CFR 63.7530, that demonstrates that your source is still within its maximum chlorine input level established during the previous performance testing (for sources that demonstrate compliance through performance testing) or EWVI must submit the calculation of HCl emissions rate using Equation 9 of 40 CFR 63.7530 that demonstrates the source is still meeting the emission limit for HCl emissions (for boilers or process heaters that demonstrate compliance through fuel analysis). If the source burned a new type of fuel, EWVI must submit the calculation of TSM input level established during the previous performance testing (for sources that demonstrate compliance through performance testing), or EWVI must submit the calculation of TSM emission rate using Equation 10 of 40 CFR 63.7530 that demonstrates that your source is still meeting the emission limit for TSM emissions (for boilers or process heaters that demonstrate compliance through fuel analysis). If the source burned a new type of fuel, you must submit the calculation of mercury input, using Equation 7 of 40 CFR 63.7530, that demonstrates that the source is still within its maximum mercury input level established during the previous performance testing (for sources that demonstrate compliance through performance testing), or EWVI must submit the calculation of mercury emission rate using Equation 11 of 40 CFR 63.7530 that demonstrates that the source is still meeting the emission limit for mercury emissions (for boilers or process heaters that demonstrate compliance through fuel analysis).
- g. If EWVI wishes to burn a new type of fuel and EWVI cannot demonstrate compliance with the maximum chlorine input operating limit using Equation 5 of 40 CFR 63.7530, the maximum TSM input operating limit using Equation 6 of 40 CFR 63.7530, or the maximum mercury input operating limit using Equation 7 of 40 CFR 63.7530, you must include in the compliance report a statement indicating the intent to conduct a new performance test within 60 days of starting to burn the new fuel.
- h. The hours of operation for each boiler and process heater that is subject to an emission limit for each calendar month within the semiannual reporting period. This requirement applies only to limited use boilers and process heaters.
- i. If EWVI had a startup, shutdown, or malfunction during the reporting period and you took actions consistent with your SSMP, the compliance report must include the information in 40 CFR 63.10(d)(5)(i).
- j. If there are no deviations from any emission limits or operating limits in 40 CFR 63, Subpart DDDDD, that apply to the source, and there are no deviations from the requirements for work practice standards in Subpart DDDDD, a statement that there were no deviations from the emission limits, operating limits, or work practice standards during the reporting period.
- k. If there were no periods during which the CMSs, including CEMS, COMS, and CPMS, were out of control as specified in 40 CFR 63.8(c)(7), a statement that there were no periods during which the CMSs were out of control during the reporting period.

[40 C.F.R. § 63.7550(c) and 45CSR§34-4.1; 45CSR13 - Permit R13-2334 - 4.5.8]

If EWVI operates a new gaseous fuel unit that is subject to the work practice standard specified in Table 1 to 40 C.F.R. 63, Subpart DDDDD, and EWVI intends to use a fuel other than natural gas or equivalent to fire the affected unit, EWVI must submit a notification of alternative fuel use within 48 hours of the declaration of a period of natural gas curtailment or supply interruption, as defined in 40 C.F.R. §63.7575. The notification must include the information specified in 4.5.11 (a) through (e).

- a. Company name and address.
- b. Identification of the affected unit.
- c. Reason EWVI is unable to use natural gas or equivalent fuel, including the date when the natural gas curtailment was declared or the natural gas supply interruption began.
- d. Types of alternative fuel that you intend to use.
- e. Dates when the alternative fuel use is expected to begin and end.

[40 C.F.R. § 63.7550(g) and 45CSR§34-4.1; 45CSR13 - Permit R13-2334 - 4.5.9]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4000	Emission unit name: TK-4000	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
External floating roof; crude oil; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1992	Installation date: MM/DD/1992	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
2,310,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___ Yes <input checked="" type="checkbox"/> No	If yes, is it? ___ Indirect Fired ___ Direct Fired
---	---

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions

Limitations – N/A
- Applicable Requirement – 45 CSR 34
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.6.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment

installed to meet the requirements of 40 C.F.R. § 60.112b.

- (a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:
- (1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.
 - (2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.
 - (3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):
 - (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
 - (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.
 - (4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.
 - (5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.
- (b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:
- (1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.
 - (i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.
 - (ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.
 - (iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.
 - (2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:
 - (i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.
 - (ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.

(1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.

(2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:

(i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(iii) As measured by an appropriate method as approved by the Administrator.

(g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or

(c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4001	Emission unit name: TK-4001	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
External floating roof; crude oil; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1973	Installation date: MM/DD/1973	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
2,310,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___ Yes <input checked="" type="checkbox"/> No	If yes, is it? ___ Indirect Fired ___ Direct Fired
---	---

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.2, 7.1.6, 7.1.7 – R13-2334M
- Applicable Requirement – 40 CFR 60
Limitations – Section 7.1.7
- Applicable Requirement – 45 CSR 16
Limitations – Section 7.1.7
- Applicable Requirement – 45 CSR 30
Limitations – N/A
- Applicable Requirement – 40 CFR 63
Limitations – N/A
- Applicable Requirement – 45 CSR 34
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.6.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

Except as provided in 40 C.F.R. § 60.113(d), EWVI, subject to 40 C.F.R. Part 60 subpart K, shall maintain a record of the petroleum liquid stored, the period of storage, and the maximum true vapor pressure of that liquid during the respective storage period.

[40 C.F.R. § 60.112(a) and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.3.7.]

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.6.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for

organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.6.]**

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.4.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Except as provided in 40 C.F.R. § 63.120(b)(7), EWVI shall determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel, and the secondary seal and the wall of the storage vessel according to the frequency specified in paragraphs (i) through (iii) below. EWVI shall notify the Administrator in writing 30 calendar days in advance of any required gap measurements to afford the Administrator the opportunity to have an observer present.

- (i) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps

between the vessel wall and the primary seal shall be performed during the hydrostatic testing of the vessel or by the compliance date specified in 40 C.F.R. § 63.100 of subpart F, whichever occurs last, and at least once every 5 years thereafter.

(ii) For an external floating roof vessel equipped with a liquid-mounted or metallic shoe primary seal and without a secondary seal as provided for in 40 C.F.R. § 63.119(c)(1)(iv) of subpart G, measurements of gaps between the vessel wall and the primary seal shall be performed by the compliance date specified in 40 C.F.R. § 63.100 of subpart F and at least once per year thereafter, until a secondary seal is installed. When a secondary seal is installed above the primary seal, measurements of gaps between the vessel wall and both the primary and secondary seals shall be performed within 90 calendar days of installation of the secondary seal, and according to the frequency specified in paragraphs (i) and (iii) of this section thereafter.

(iii) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps between the vessel wall and the secondary seal shall be performed by the compliance date specified in § 63.100 of subpart F of this part and at least once per year thereafter.

[40 C.F.R. §§ 63.120(b)(1) and (9); and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.2.]

EWVI shall visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects; the primary seal has holes, tears, or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or the gaskets no longer close off the liquid surface from the atmosphere; or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with organic HAP.

(ii) Except as provided in paragraph (iii) below, for all the inspections of the external floating roof, primary seal, secondary seal, and fittings, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(iii) If the inspection of the external floating roof, primary seal, secondary seal, and fittings is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP, EWVI shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

[40 C.F.R. § 63.120(b)(10) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.3.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(c), EWVI shall keep records describing the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b). The records shall include the date of the measurement, the raw data obtained in the measurement, and the calculations described in 40 C.F.R. § 63.120(b) (3) and (4).

[40 C.F.R. § 63.123(d) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.6.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using an external floating roof, EWVI shall meet the periodic reporting requirements specified in paragraphs (i) through (iii) below.

(i) EWVI shall submit, as part of the Periodic Report, documentation of the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b) of subpart G in which the seal and seal gap requirements of 40 C.F.R. § 63.120(b)(3), (b)(4), (b)(5), or (b)(6) of subpart G are not met. This documentation shall include the date of the seal gap measurement, the raw data obtained in the seal gap measurement and the calculations described in 40 C.F.R. § 63.120(b)(3) and (b)(4) of subpart G, a description of any seal condition specified in 40 C.F.R. § 63.120(b)(5) or (b)(6) of subpart G, and a description of the nature of and date the repair was made, or the date the storage vessel was emptied.

(ii) If an extension is utilized in accordance with 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, as applicable; and describe the date the vessel was emptied and the nature of and date the repair was made.

(iii) EWVI shall submit, as part of the Periodic Report, documentation of any failures that are identified during visual inspections required by 40 C.F.R. § 63.120(b)(10) of subpart G. This documentation shall meet the specifications and requirements in paragraphs (A) and (B) below.

(A) A failure is defined as any time in which the external floating roof has defects; or the primary seal has holes or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or, for a storage vessel that is part of a new source, the gaskets no longer close off the liquid surface from the atmosphere; or, for a storage vessel that is part of a new source, the slotted membrane has more than 10 percent open area.

(B) Each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(3) and 45CSR§34-2.1.; 45CSR13 - R13-2334 - 7.4.2.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(1)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(1), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not

have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.4, 7.1.5 – R13-2334M
- Applicable Requirement – 45 CSR 30
Limitations – N/A
- Applicable Requirement – 45 CSR 34
Limitations – Section 7.1.5 – R13-2334M
- Applicable Requirement – 40 CFR 63
Limitations – Section 7.1.5 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.4.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Except as provided in 40 C.F.R. § 63.120(b)(7), EWVI shall determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel, and the secondary seal and the wall of the storage vessel according to the frequency specified in paragraphs (i) through (iii) below. EWVI shall notify the Administrator in writing 30 calendar days in advance of any required gap measurements to afford the Administrator the opportunity to have an observer present.

- (i) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps

between the vessel wall and the primary seal shall be performed during the hydrostatic testing of the vessel or by the compliance date specified in 40 C.F.R. § 63.100 of subpart F, whichever occurs last, and at least once every 5 years thereafter.

(ii) For an external floating roof vessel equipped with a liquid-mounted or metallic shoe primary seal and without a secondary seal as provided for in 40 C.F.R. § 63.119(c)(1)(iv) of subpart G, measurements of gaps between the vessel wall and the primary seal shall be performed by the compliance date specified in 40 C.F.R. § 63.100 of subpart F and at least once per year thereafter, until a secondary seal is installed. When a secondary seal is installed above the primary seal, measurements of gaps between the vessel wall and both the primary and secondary seals shall be performed within 90 calendar days of installation of the secondary seal, and according to the frequency specified in paragraphs (i) and (iii) of this section thereafter.

(iii) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps between the vessel wall and the secondary seal shall be performed by the compliance date specified in § 63.100 of subpart F of this part and at least once per year thereafter.

[40 C.F.R. §§ 63.120(b)(1) and (9); and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.2.]

EWVI shall visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects; the primary seal has holes, tears, or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or the gaskets no longer close off the liquid surface from the atmosphere; or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with organic HAP.

(ii) Except as provided in paragraph (iii) below, for all the inspections of the external floating roof, primary seal, secondary seal, and fittings, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(iii) If the inspection of the external floating roof, primary seal, secondary seal, and fittings is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP, EWVI shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

[40 C.F.R. § 63.120(b)(10) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.3.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(c), EWVI shall keep records describing the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b). The records shall include the date of the measurement, the raw data obtained in the measurement, and the calculations described in 40 C.F.R. § 63.120(b) (3) and (4).

[40 C.F.R. § 63.123(d) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.6.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using an external floating roof, EWVI shall meet the periodic reporting requirements specified in paragraphs (i) through (iii) below.

(i) EWVI shall submit, as part of the Periodic Report, documentation of the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b) of subpart G in which the seal and seal gap requirements of 40 C.F.R. § 63.120(b)(3), (b)(4), (b)(5), or (b)(6) of subpart G are not met. This documentation shall include the date of the seal gap measurement, the raw data obtained in the seal gap measurement and the calculations described in 40 C.F.R. § 63.120(b)(3) and (b)(4) of subpart G, a description of any seal condition specified in 40 C.F.R. § 63.120(b)(5) or (b)(6) of subpart G, and a description of the nature of and date the repair was made, or the date the storage vessel was emptied.

(ii) If an extension is utilized in accordance with 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, as applicable; and describe the date the vessel was emptied and the nature of and date the repair was made.

(iii) EWVI shall submit, as part of the Periodic Report, documentation of any failures that are identified during visual inspections required by 40 C.F.R. § 63.120(b)(10) of subpart G. This documentation shall meet the specifications and requirements in paragraphs (A) and (B) below.

(A) A failure is defined as any time in which the external floating roof has defects; or the primary seal has holes or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or, for a storage vessel that is part of a new source, the gaskets no longer close off the liquid surface from the atmosphere; or, for a storage vessel that is part of a new source, the slotted membrane has more than 10 percent open area.

(B) Each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(3) and 45CSR§34-2.1.; 45CSR13 - R13-2334 - 7.4.2.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(1)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(1), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not

have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4006	Emission unit name: TK-4006	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
External floating roof; gasoline; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
1,050,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.4, 7.1.5 – R13-2334M
- Applicable Requirement – 45 CSR 30
Limitations – N/A
- Applicable Requirement – 45 CSR 34
Limitations – Section 7.1.5 – R13-2334M
- Applicable Requirement – 40 CFR 63
Limitations – Section 7.1.5 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.4.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Except as provided in 40 C.F.R. § 63.120(b)(7), EWVI shall determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel, and the secondary seal and the wall of the storage vessel according to the frequency specified in paragraphs (i) through (iii) below. EWVI shall notify the Administrator in writing 30 calendar days in advance of any required gap measurements to afford the Administrator the opportunity to have an observer present.

- (i) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps

between the vessel wall and the primary seal shall be performed during the hydrostatic testing of the vessel or by the compliance date specified in 40 C.F.R. § 63.100 of subpart F, whichever occurs last, and at least once every 5 years thereafter.

(ii) For an external floating roof vessel equipped with a liquid-mounted or metallic shoe primary seal and without a secondary seal as provided for in 40 C.F.R. § 63.119(c)(1)(iv) of subpart G, measurements of gaps between the vessel wall and the primary seal shall be performed by the compliance date specified in 40 C.F.R. § 63.100 of subpart F and at least once per year thereafter, until a secondary seal is installed. When a secondary seal is installed above the primary seal, measurements of gaps between the vessel wall and both the primary and secondary seals shall be performed within 90 calendar days of installation of the secondary seal, and according to the frequency specified in paragraphs (i) and (iii) of this section thereafter.

(iii) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps between the vessel wall and the secondary seal shall be performed by the compliance date specified in § 63.100 of subpart F of this part and at least once per year thereafter.

[40 C.F.R. §§ 63.120(b)(1) and (9); and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.2.]

EWVI shall visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects; the primary seal has holes, tears, or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or the gaskets no longer close off the liquid surface from the atmosphere; or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with organic HAP.

(ii) Except as provided in paragraph (iii) below, for all the inspections of the external floating roof, primary seal, secondary seal, and fittings, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(iii) If the inspection of the external floating roof, primary seal, secondary seal, and fittings is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP, EWVI shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

[40 C.F.R. § 63.120(b)(10) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.3.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in

a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(c), EWVI shall keep records describing the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b). The records shall include the date of the measurement, the raw data obtained in the measurement, and the calculations described in 40 C.F.R. § 63.120(b) (3) and (4).

[40 C.F.R. § 63.123(d) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.6.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using an external floating roof, EWVI shall meet the periodic reporting requirements specified in paragraphs (i) through (iii) below.

(i) EWVI shall submit, as part of the Periodic Report, documentation of the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b) of subpart G in which the seal and seal gap requirements of 40 C.F.R. § 63.120(b)(3), (b)(4), (b)(5), or (b)(6) of subpart G are not met. This documentation shall include the date of the seal gap measurement, the raw data obtained in the seal gap measurement and the calculations described in 40 C.F.R. § 63.120(b)(3) and (b)(4) of subpart G, a description of any seal condition specified in 40 C.F.R. § 63.120(b)(5) or (b)(6) of subpart G, and a description of the nature of and date the repair was made, or the date the storage vessel was emptied.

(ii) If an extension is utilized in accordance with 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, as applicable; and describe the date the vessel was emptied and the nature of and date the repair was made.

(iii) EWVI shall submit, as part of the Periodic Report, documentation of any failures that are identified during visual inspections required by 40 C.F.R. § 63.120(b)(10) of subpart G. This documentation shall meet the specifications and requirements in paragraphs (A) and (B) below.

(A) A failure is defined as any time in which the external floating roof has defects; or the primary seal has holes or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or, for a storage vessel that is part of a new source, the gaskets no longer close off the liquid surface from the atmosphere; or, for a storage vessel that is part of a new source, the slotted membrane has more than 10 percent open area.

(B) Each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(3) and 45CSR§34-2.1.; 45CSR13 - R13-2334 - 7.4.2.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(1)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(1), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§

63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4007	Emission unit name: TK-4007	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
2,310,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Section 7.1.1 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:
N/A

Testing:
N/A

Recordkeeping:
To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.
$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.
[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

Reporting:
N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4008	Emission unit name: TK-4008	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1970	Installation date: MM/DD/1970	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
1,260,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input type="checkbox"/> Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

Fixed roof Group 1 Tank 4012 shall be equipped with internal floating roofs to minimize emissions of VOC's.

[45CSR13 - Permit R13-2334 - 7.1.3.]

[45CSR13 - Permit R13-2334 - 7.2.1.]

To demonstrate compliance with 40 C.F.R. § 63.119(b) (storage vessel equipped with a fixed roof and internal floating roof) or with 40 C.F.R. § 63.119(d) (storage vessel equipped with an external floating roof converted to an internal floating roof), EWVI shall comply with the requirements below.

- (1) EWVI shall visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), according to the schedule specified in paragraphs (2) and (3) below.
- (2) For vessels equipped with a single-seal system, EWVI shall perform the inspections specified in paragraphs (2)(i) and (2)(ii) below.
 - (i) Visually inspect the internal floating roof and the seal through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill, or at least once every 12 months after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.
 - (ii) Visually inspect the internal floating roof, the seal, gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed, and at least once every 10 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.
- (3) For vessels equipped with a double-seal system as specified in 40 C.F.R. § 63.119(b)(3)(iii), EWVI shall perform either the inspection required in paragraph (3)(i) of this section or the inspections required in both paragraphs (3)(ii) and (3)(iii) of this section.
 - (i) EWVI shall visually inspect the internal floating roof, the primary seal, the secondary seal, gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed and at least once every 5 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F; or
 - (ii) EWVI shall visually inspect the internal floating roof and the secondary seal through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill, or at least once every 12 months after the compliance date specified in 40 C.F.R. § 63.100 of subpart F, and (iii) Visually inspect the internal floating roof, the primary seal, the secondary seal, gaskets, slotted membranes, and sleeve seals (if any) each time the vessel is emptied and degassed and at least once every 10 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.

[40 C.F.R. § 63.120(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.4.]

Testing:
N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(b), EWVI shall keep a record that each inspection required by 40 C.F.R. § 63.120(a) of subpart G was performed.

[40 C.F.R. § 63.123(c) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.5.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using a fixed roof and an internal floating roof or by using an external floating roof converted to an internal floating roof, EWVI shall submit the results of each inspection conducted in accordance with 40 C.F.R. § 63.120(a) of subpart G in which a failure is detected in the control equipment.

(i) For vessels for which annual inspections are required under 40 C.F.R. § 63.120(a)(2)(i) or (a)(3)(ii) of subpart G, the specifications and requirements listed in paragraphs (A) through (C) below apply.

(A) A failure is defined as any time in which the internal floating roof is not resting on the surface of the liquid inside the storage vessel and is not resting on the leg supports; or there is liquid on the floating roof; or the seal is detached from the internal floating roof; or there are holes, tears, or other openings in the seal or seal fabric; or there are visible gaps between the seal and the wall of the storage vessel.

(B) Except as provided in paragraph (C) below, each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made or the date the storage vessel was emptied.

(C) If an extension is utilized in accordance with 40 C.F.R. § 63.120(a)(4) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(a)(4) of subpart G; and describe the date the storage vessel was emptied and the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(2) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.1.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(l)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an

emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(l), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4013	Emission unit name: TK-4013	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Internal floating roof; gasoline; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
630,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.2, 7.1.3, 7.1.5 – R13-2334M
Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 34
Limitations – Section 7.1.5 – R13-2334M
Applicable Requirement – 40 CFR 63
Limitations – Section 7.1.5 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

Fixed roof Group 1 Tanks 4013 shall be equipped with internal floating roofs to minimize emissions of VOC's.
[45CSR13 - Permit R13-2334 - 7.1.3.]
[45CSR13 - Permit R13-2334 - 7.2.1.]

To demonstrate compliance with 40 C.F.R. § 63.119(b) (storage vessel equipped with a fixed roof and internal floating roof) or with 40 C.F.R. § 63.119(d) (storage vessel equipped with an external floating roof converted to an internal floating roof), the owner or operator shall comply with the requirements below.

- (1) The owner or operator shall visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), according to the schedule specified in paragraphs (2) and (3) below.
- (2) For vessels equipped with a single-seal system, the owner or operator shall perform the inspections specified in paragraphs (2)(i) and (2)(ii) below.
 - (i) Visually inspect the internal floating roof and the seal through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill, or at least once every 12 months after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.
 - (ii) Visually inspect the internal floating roof, the seal, gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed, and at least once every 10 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.
- (3) For vessels equipped with a double-seal system as specified in 40 C.F.R. § 63.119(b)(3)(iii), the permittee shall perform either the inspection required in paragraph (3)(i) of this section or the inspections required in both paragraphs (3)(ii) and (3)(iii) of this section.
 - (i) The owner or operator shall visually inspect the internal floating roof, the primary seal, the secondary seal, gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed and at least once every 5 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F; or
 - (ii) The permittee shall visually inspect the internal floating roof and the secondary seal through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill, or at least once every 12 months after the compliance date specified in 40 C.F.R. § 63.100 of subpart F, and (iii) Visually inspect the internal floating roof, the primary seal, the secondary seal, gaskets, slotted membranes, and sleeve seals (if any) each time the vessel is emptied and degassed and at least once every 10 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.

[40 C.F.R. § 63.120(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.4.]

Testing:
N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(b), EWVI shall keep a record that each inspection required by 40 C.F.R. § 63.120(a) of subpart G was performed.

[40 C.F.R. § 63.123(c) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.5.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using a fixed roof and an internal floating roof or by using an external floating roof converted to an internal floating roof, EWVI shall submit the results of each inspection conducted in accordance with 40 C.F.R. § 63.120(a) of subpart G in which a failure is detected in the control equipment.

(i) For vessels for which annual inspections are required under 40 C.F.R. § 63.120(a)(2)(i) or (a)(3)(ii) of subpart G, the specifications and requirements listed in paragraphs (A) through (C) below apply.

(A) A failure is defined as any time in which the internal floating roof is not resting on the surface of the liquid inside the storage vessel and is not resting on the leg supports; or there is liquid on the floating roof; or the seal is detached from the internal floating roof; or there are holes, tears, or other openings in the seal or seal fabric; or there are visible gaps between the seal and the wall of the storage vessel.

(B) Except as provided in paragraph (C) below, each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made or the date the storage vessel was emptied.

(C) If an extension is utilized in accordance with 40 C.F.R. § 63.120(a)(4) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(a)(4) of subpart G; and describe the date the storage vessel was emptied and the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(2) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.1.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of

Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(l)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(l), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4014	Emission unit name: TK-4014	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
External floating roof; gasoline; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
315,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

- Applicable Requirement – 45 CSR 30
Limitations – N/A
- Applicable Requirement – 45 CSR 34
Limitations – Section 7.1.5 – R13-2334M
- Applicable Requirement – 40 CFR 63
Limitations – Section 7.1.5 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.4.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Except as provided in 40 C.F.R. § 63.120(b)(7), EWVI shall determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel, and the secondary seal and the wall of the storage vessel according to the frequency specified in paragraphs (i) through (iii) below. EWVI shall notify the Administrator in writing 30 calendar days in advance of any required gap measurements to afford the Administrator the opportunity to have an observer present.

- (i) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps

between the vessel wall and the primary seal shall be performed during the hydrostatic testing of the vessel or by the compliance date specified in 40 C.F.R. § 63.100 of subpart F, whichever occurs last, and at least once every 5 years thereafter.

(ii) For an external floating roof vessel equipped with a liquid-mounted or metallic shoe primary seal and without a secondary seal as provided for in 40 C.F.R. § 63.119(c)(1)(iv) of subpart G, measurements of gaps between the vessel wall and the primary seal shall be performed by the compliance date specified in 40 C.F.R. § 63.100 of subpart F and at least once per year thereafter, until a secondary seal is installed. When a secondary seal is installed above the primary seal, measurements of gaps between the vessel wall and both the primary and secondary seals shall be performed within 90 calendar days of installation of the secondary seal, and according to the frequency specified in paragraphs (i) and (iii) of this section thereafter.

(iii) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps between the vessel wall and the secondary seal shall be performed by the compliance date specified in § 63.100 of subpart F of this part and at least once per year thereafter.

[40 C.F.R. §§ 63.120(b)(1) and (9); and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.2.]

EWVI shall visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects; the primary seal has holes, tears, or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or the gaskets no longer close off the liquid surface from the atmosphere; or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with organic HAP.

(ii) Except as provided in paragraph (iii) below, for all the inspections of the external floating roof, primary seal, secondary seal, and fittings, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(iii) If the inspection of the external floating roof, primary seal, secondary seal, and fittings is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP, EWVI shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

[40 C.F.R. § 63.120(b)(10) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.3.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(c), EWVI shall keep records describing the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b). The records shall include the date of the measurement, the raw data obtained in the measurement, and the calculations described in 40 C.F.R. § 63.120(b) (3) and (4).

[40 C.F.R. § 63.123(d) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.6.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using an external floating roof, EWVI shall meet the periodic reporting requirements specified in paragraphs (i) through (iii) below.

(i) EWVI shall submit, as part of the Periodic Report, documentation of the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b) of subpart G in which the seal and seal gap requirements of 40 C.F.R. § 63.120(b)(3), (b)(4), (b)(5), or (b)(6) of subpart G are not met. This documentation shall include the date of the seal gap measurement, the raw data obtained in the seal gap measurement and the calculations described in 40 C.F.R. § 63.120(b)(3) and (b)(4) of subpart G, a description of any seal condition specified in 40 C.F.R. § 63.120(b)(5) or (b)(6) of subpart G, and a description of the nature of and date the repair was made, or the date the storage vessel was emptied.

(ii) If an extension is utilized in accordance with 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, as applicable; and describe the date the vessel was emptied and the nature of and date the repair was made.

(iii) EWVI shall submit, as part of the Periodic Report, documentation of any failures that are identified during visual inspections required by 40 C.F.R. § 63.120(b)(10) of subpart G. This documentation shall meet the specifications and requirements in paragraphs (A) and (B) below.

(A) A failure is defined as any time in which the external floating roof has defects; or the primary seal has holes or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or, for a storage vessel that is part of a new source, the gaskets no longer close off the liquid surface from the atmosphere; or, for a storage vessel that is part of a new source, the slotted membrane has more than 10 percent open area.

(B) Each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(3) and 45CSR§34-2.1.; 45CSR13 - R13-2334 - 7.4.2.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(1)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(1), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not

have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4015	Emission unit name: TK-4015	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
External floating roof; gasoline; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
315,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.4, 7.1.5 – R13-2334M
- Applicable Requirement – 45 CSR 30
Limitations – N/A
- Applicable Requirement – 45 CSR 34
Limitations – Section 7.1.5 – R13-2334M
- Applicable Requirement – 40 CFR 63
Limitations – Section 7.1.5 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.4.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Except as provided in 40 C.F.R. § 63.120(b)(7), EWVI shall determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel, and the secondary seal and the wall of the storage vessel according to the frequency specified in paragraphs (i) through (iii) below. EWVI shall notify the Administrator in writing 30 calendar days in advance of any required gap measurements to afford the Administrator the opportunity to have an observer present.

- (i) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps

between the vessel wall and the primary seal shall be performed during the hydrostatic testing of the vessel or by the compliance date specified in 40 C.F.R. § 63.100 of subpart F, whichever occurs last, and at least once every 5 years thereafter.

(ii) For an external floating roof vessel equipped with a liquid-mounted or metallic shoe primary seal and without a secondary seal as provided for in 40 C.F.R. § 63.119(c)(1)(iv) of subpart G, measurements of gaps between the vessel wall and the primary seal shall be performed by the compliance date specified in 40 C.F.R. § 63.100 of subpart F and at least once per year thereafter, until a secondary seal is installed. When a secondary seal is installed above the primary seal, measurements of gaps between the vessel wall and both the primary and secondary seals shall be performed within 90 calendar days of installation of the secondary seal, and according to the frequency specified in paragraphs (i) and (iii) of this section thereafter.

(iii) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps between the vessel wall and the secondary seal shall be performed by the compliance date specified in § 63.100 of subpart F of this part and at least once per year thereafter.

[40 C.F.R. §§ 63.120(b)(1) and (9); and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.2.]

EWVI shall visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects; the primary seal has holes, tears, or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or the gaskets no longer close off the liquid surface from the atmosphere; or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with organic HAP.

(ii) Except as provided in paragraph (iii) below, for all the inspections of the external floating roof, primary seal, secondary seal, and fittings, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(iii) If the inspection of the external floating roof, primary seal, secondary seal, and fittings is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP, EWVI shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

[40 C.F.R. § 63.120(b)(10) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.3.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(c), EWVI shall keep records describing the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b). The records shall include the date of the measurement, the raw data obtained in the measurement, and the calculations described in 40 C.F.R. § 63.120(b) (3) and (4).

[40 C.F.R. § 63.123(d) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.6.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using an external floating roof, EWVI shall meet the periodic reporting requirements specified in paragraphs (i) through (iii) below.

(i) EWVI shall submit, as part of the Periodic Report, documentation of the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b) of subpart G in which the seal and seal gap requirements of 40 C.F.R. § 63.120(b)(3), (b)(4), (b)(5), or (b)(6) of subpart G are not met. This documentation shall include the date of the seal gap measurement, the raw data obtained in the seal gap measurement and the calculations described in 40 C.F.R. § 63.120(b)(3) and (b)(4) of subpart G, a description of any seal condition specified in 40 C.F.R. § 63.120(b)(5) or (b)(6) of subpart G, and a description of the nature of and date the repair was made, or the date the storage vessel was emptied.

(ii) If an extension is utilized in accordance with 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, as applicable; and describe the date the vessel was emptied and the nature of and date the repair was made.

(iii) EWVI shall submit, as part of the Periodic Report, documentation of any failures that are identified during visual inspections required by 40 C.F.R. § 63.120(b)(10) of subpart G. This documentation shall meet the specifications and requirements in paragraphs (A) and (B) below.

(A) A failure is defined as any time in which the external floating roof has defects; or the primary seal has holes or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or, for a storage vessel that is part of a new source, the gaskets no longer close off the liquid surface from the atmosphere; or, for a storage vessel that is part of a new source, the slotted membrane has more than 10 percent open area.

(B) Each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(3) and 45CSR§34-2.1.; 45CSR13 - R13-2334 - 7.4.2.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(1)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(1), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not

have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4016	Emission unit name: TK-4016	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
External floating roof; gasoline; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
315,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.4, 7.1.5 – R13-2334M
- Applicable Requirement – 45 CSR 30
Limitations – N/A
- Applicable Requirement – 45 CSR 34
Limitations – Section 7.1.5 – R13-2334M
- Applicable Requirement – 40 CFR 63
Limitations – Section 7.1.5 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

Compliance with the following requirements may be determined by visual inspection by the Director or a duly authorized representative of the Director:

- a. Each and every slotted guidepole that passes through the floating roof shall be equipped with one of the following: a pole float system; an alternate control technology that has an emission factor less than or equal to the emission factor for a pole float system; a pole sleeve system; an internal sleeve emission control system; a solid guidepole system; a flexible enclosure system; or
- b. In the alternative, EWVI may elect to:
 - 1. cover an external floating roof tank with a fixed roof mounted on the tank above the external floating roof, or
 - 2. remove the tank from the service storing liquids subject to NSPS Ka or Kb, modify the permit for that tank, and represent to the West Virginia Division of Air Quality that the tank will not be used to store certain petroleum liquids or volatile organic liquids.
- c. For systems that use a sliding cover, the sliding cover shall be in place over the slotted-guidepole opening in the floating roof at all times, except, when the sliding cover must be removed for access. If the control technology used includes a guidepole float, the float shall be floating within the guidepole at all times except when it must be removed for access to the stored liquid or when the tank is empty.
- d. EWVI shall visually inspect the deck fitting for the slotted guidepole at least once every ten (10) years and each time the vessel is emptied and degassed. If the slotted guidepole deck fitting or control device has defects, or if a gap that is more than 0.32 centimeters (1/8 inch) exists between any gasket required for control of the slotted guidepole deck fitting and any surface that it is intended to seal, such items shall be repaired before filling or refilling the storage vessel with regulated material.
- e. Tanks taken out of hydrocarbon service, for any reason, do not have to have any controls in place during the time they are taken out of service. Tanks taken out of service must have in place, prior to being put back into service, all controls necessary to remain below the emission limits set forth by the current version of permit R13-2334. **[45CSR13 - Permit R13-2334 - 7.1.4.]**

[45CSR13 - Permit R13-2334 - 7.2.1.]

Except as provided in 40 C.F.R. § 63.120(b)(7), EWVI shall determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel, and the secondary seal and the wall of the storage vessel according to the frequency specified in paragraphs (i) through (iii) below. EWVI shall notify the Administrator in writing 30 calendar days in advance of any required gap measurements to afford the Administrator the opportunity to have an observer present.

- (i) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps

between the vessel wall and the primary seal shall be performed during the hydrostatic testing of the vessel or by the compliance date specified in 40 C.F.R. § 63.100 of subpart F, whichever occurs last, and at least once every 5 years thereafter.

(ii) For an external floating roof vessel equipped with a liquid-mounted or metallic shoe primary seal and without a secondary seal as provided for in 40 C.F.R. § 63.119(c)(1)(iv) of subpart G, measurements of gaps between the vessel wall and the primary seal shall be performed by the compliance date specified in 40 C.F.R. § 63.100 of subpart F and at least once per year thereafter, until a secondary seal is installed. When a secondary seal is installed above the primary seal, measurements of gaps between the vessel wall and both the primary and secondary seals shall be performed within 90 calendar days of installation of the secondary seal, and according to the frequency specified in paragraphs (i) and (iii) of this section thereafter.

(iii) For an external floating roof vessel equipped with primary and secondary seals, measurements of gaps between the vessel wall and the secondary seal shall be performed by the compliance date specified in § 63.100 of subpart F of this part and at least once per year thereafter.

[40 C.F.R. §§ 63.120(b)(1) and (9); and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.2.]

EWVI shall visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects; the primary seal has holes, tears, or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or the gaskets no longer close off the liquid surface from the atmosphere; or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with organic HAP.

(ii) Except as provided in paragraph (iii) below, for all the inspections of the external floating roof, primary seal, secondary seal, and fittings, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(iii) If the inspection of the external floating roof, primary seal, secondary seal, and fittings is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP, EWVI shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

[40 C.F.R. § 63.120(b)(10) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.3.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(c), EWVI shall keep records describing the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b). The records shall include the date of the measurement, the raw data obtained in the measurement, and the calculations described in 40 C.F.R. § 63.120(b) (3) and (4).

[40 C.F.R. § 63.123(d) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.6.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using an external floating roof, EWVI shall meet the periodic reporting requirements specified in paragraphs (i) through (iii) below.

(i) EWVI shall submit, as part of the Periodic Report, documentation of the results of each seal gap measurement made in accordance with 40 C.F.R. § 63.120(b) of subpart G in which the seal and seal gap requirements of 40 C.F.R. § 63.120(b)(3), (b)(4), (b)(5), or (b)(6) of subpart G are not met. This documentation shall include the date of the seal gap measurement, the raw data obtained in the seal gap measurement and the calculations described in 40 C.F.R. § 63.120(b)(3) and (b)(4) of subpart G, a description of any seal condition specified in 40 C.F.R. § 63.120(b)(5) or (b)(6) of subpart G, and a description of the nature of and date the repair was made, or the date the storage vessel was emptied.

(ii) If an extension is utilized in accordance with 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(b)(7)(ii) or (b)(8) of subpart G, as applicable; and describe the date the vessel was emptied and the nature of and date the repair was made.

(iii) EWVI shall submit, as part of the Periodic Report, documentation of any failures that are identified during visual inspections required by 40 C.F.R. § 63.120(b)(10) of subpart G. This documentation shall meet the specifications and requirements in paragraphs (A) and (B) below.

(A) A failure is defined as any time in which the external floating roof has defects; or the primary seal has holes or other openings in the seal or the seal fabric; or the secondary seal has holes, tears, or other openings in the seal or the seal fabric; or, for a storage vessel that is part of a new source, the gaskets no longer close off the liquid surface from the atmosphere; or, for a storage vessel that is part of a new source, the slotted membrane has more than 10 percent open area.

(B) Each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(3) and 45CSR§34-2.1.; 45CSR13 - R13-2334 - 7.4.2.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(1)(3).

(1) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(1), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not

have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4017	Emission unit name: TK-4017	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
840,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X_ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Section 7.1.1 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:
N/A

Testing:
N/A

Recordkeeping:
To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.
$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.
[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

(i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or

(ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in

this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b(a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the

following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b(a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

(a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this

section will be kept for the life of the source.

(b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.

(c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.

(d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.

(e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.

(1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.

(2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:

(i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).

(ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.

(f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.

(1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.

(2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:

(i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(iii) As measured by an appropriate method as approved by the Administrator.

(g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4019	Emission unit name: TK-4019	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
704,970 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Section 7.1.1 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Emission unit ID number: 4023	Emission unit name: TK-4023	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
571,200 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Section 7.1.1 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:
N/A

Testing:
N/A

Recordkeeping:
To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.
$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.
[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

Reporting:
N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4024	Emission unit name: TK-4024	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1970	Installation date: MM/DD/1970	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
840,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4030	Emission unit name: TK-4030	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1971	Installation date: MM/DD/1971	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
65,100 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Section 7.1.1 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

N/A

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

(i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or

(ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in

this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b(a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the

following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b(a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

(a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this

section will be kept for the life of the source.

(b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.

(c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.

(d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.

(e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.

(1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.

(2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:

(i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).

(ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.

(f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.

(1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.

(2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:

(i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(iii) As measured by an appropriate method as approved by the Administrator.

(g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.
[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

Except as provided in 40 C.F.R. § 60.113(d), EWVI, subject to 40 C.F.R. Part 60 subpart K, shall maintain a record of the petroleum liquid stored, the period of storage, and the maximum true vapor pressure of that liquid during the respective storage period.
[40 C.F.R. § 60.112(a) and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.3.7.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4039	Emission unit name: TK-4039	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1977	Installation date: MM/DD/1977	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
1,260,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.7 – R13-2334M
Applicable Requirement – 40 CFR 60
Limitations – Section 7.1.7
Applicable Requirement – 45 CSR 16
Limitations – Section 7.1.7
Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 40 CFR 63
Limitations – N/A
Applicable Requirement – 45 CSR 34
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:
N/A

Testing:
N/A

Recordkeeping:
To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.
$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.
[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.
[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

Except as provided in 40 C.F.R. § 60.113(d), EWVI, subject to 40 C.F.R. Part 60 subpart K, shall maintain a record of the petroleum liquid stored, the period of storage, and the maximum true vapor pressure of that liquid during the

respective storage period.

[40 C.F.R. § 60.112(a) and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.3.7.]

Reporting:

AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.
$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.
[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4045	Emission unit name: TK-4045	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
Construction date: MM/DD/1982	Installation date: MM/DD/1982	Modification date(s): N/A

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
630,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Section 7.1.1 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

- (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
- (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than

10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.
 - (1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.
 - (2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:
 - (i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (iii) As measured by an appropriate method as approved by the Administrator.
- (g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Reporting:

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the Schedule of Compliance Form as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4050	Emission unit name: TK-4050	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Internal floating roof; gasoline; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
Construction date: MM/DD/1993	Installation date: MM/DD/1993	Modification date(s): N/A

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
630,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 40 CFR 60
Limitations – N/A
Applicable Requirement – 45 CSR 16
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

To demonstrate compliance with 40 C.F.R. § 63.119(b) (storage vessel equipped with a fixed roof and internal floating roof) or with 40 C.F.R. § 63.119(d) (storage vessel equipped with an external floating roof converted to an internal floating roof), EWVI shall comply with the requirements below.

- (1) EWVI shall visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), according to the schedule specified in paragraphs (2) and (3) below.
- (2) For vessels equipped with a single-seal system, EWVI shall perform the inspections specified in paragraphs (2)(i) and (2)(ii) below.
 - (i) Visually inspect the internal floating roof and the seal through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill, or at least once every 12 months after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.
 - (ii) Visually inspect the internal floating roof, the seal, gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed, and at least once every 10 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.
- (3) For vessels equipped with a double-seal system as specified in 40 C.F.R. § 63.119(b)(3)(iii), EWVI shall perform either the inspection required in paragraph (3)(i) of this section or the inspections required in both paragraphs (3)(ii) and (3)(iii) of this section.
 - (i) EWVI shall visually inspect the internal floating roof, the primary seal, the secondary seal, gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed and at least once every 5 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F; or
 - (ii) EWVI shall visually inspect the internal floating roof and the secondary seal through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill, or at least once every 12 months after the compliance date specified in 40 C.F.R. § 63.100 of subpart F, and (iii) Visually inspect the internal floating roof, the primary seal, the secondary seal, gaskets, slotted membranes, and sleeve seals (if any) each time the vessel is emptied and degassed and at least once every 10 years after the compliance date specified in 40 C.F.R. § 63.100 of subpart F.

[40 C.F.R. § 63.120(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.2.4.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a),

(b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

(i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or

(ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm

diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, the EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) EWVI of each source that is equipped with a closed vent system and control device as required in § 60.112b(a)(3) or (b)(2) (other than a flare) is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b(a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.5.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

If EWVI elects to utilize an extension in emptying a storage vessel in accordance with 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8), EWVI shall keep the documentation specified in 40 C.F.R. § 63.120 (a)(4), (b)(7)(ii), or (b)(8) in a readily accessible location, as applicable.

[40 C.F.R. § 63.123(g) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.4.]

If EWVI elects to comply with 40 C.F.R. § 63.119(b), EWVI shall keep a record that each inspection required by 40 C.F.R. § 63.120(a) of subpart G was performed.

[40 C.F.R. § 63.123(c) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.5.]

Reporting:

If EWVI elects to comply with 40 C.F.R. § 63.646 by using a fixed roof and an internal floating roof or by using an external floating roof converted to an internal floating roof, EWVI shall submit the results of each inspection conducted in accordance with 40 C.F.R. § 63.120(a) of subpart G in which a failure is detected in the control equipment.

(i) For vessels for which annual inspections are required under 40 C.F.R. § 63.120(a)(2)(i) or (a)(3)(ii) of subpart G, the specifications and requirements listed in paragraphs (A) through (C) below apply.

(A) A failure is defined as any time in which the internal floating roof is not resting on the surface of the liquid inside the storage vessel and is not resting on the leg supports; or there is liquid on the floating roof; or the seal is detached from the internal floating roof; or there are holes, tears, or other openings in the seal or seal fabric; or there are visible gaps between the seal and the wall of the storage vessel.

(B) Except as provided in paragraph (C) below, each Periodic Report shall include the date of the inspection, identification of each storage vessel in which a failure was detected, and a description of the failure. The Periodic Report shall also describe the nature of and date the repair was made or the date the storage vessel was emptied.

(C) If an extension is utilized in accordance with 40 C.F.R. § 63.120(a)(4) of subpart G, EWVI shall, in the next Periodic Report, identify the vessel; include the documentation specified in 40 C.F.R. § 63.120(a)(4) of subpart G; and describe the date the storage vessel was emptied and the nature of and date the repair was made.

[40 C.F.R. § 63.654(g)(2) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.1.]

The Notification of Compliance Status report shall include the following information:

(i) For storage vessels:

(A) Identification of each storage vessel subject to 40 C.F.R. Part 63 subpart CC, and for each Group 1 storage vessel subject to 40 C.F.R. Part 63 subpart CC, the information specified in 40 C.F.R. §§ 63.654 (f)(1)(i)(A)(1) through (f)(1)(i)(A)(3). This information is to be revised each time a Notification of Compliance Status report is submitted for a storage vessel subject to the compliance schedule specified in § 63.640(h)(4) or to comply with § 63.640(l)(3).

(I) For each Group 1 storage vessel complying with 40 C.F.R. § 63.646 that is not included in an emissions average, the method of compliance (i.e., internal floating roof, external floating roof, or closed vent system and control device).

(2) For storage vessels subject to the compliance schedule specified in 40C.F.R. § 63.640(h)(4) that are not complying with 40 C.F.R. § 63.646, the anticipated compliance date.

(3) For storage vessels subject to the compliance schedule specified in 40 C.F.R. § 63.640(h)(4) that are complying with 40 C.F.R. § 63.646 and the Group 1 storage vessels described in 40 C.F.R. § 63.640(l), the actual compliance date.

[40 C.F.R. § 63.654(f)(1) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.3.]

Notifications of inspections as specified in paragraph (i) below section shall be submitted;

(i) In order to afford the Administrator the opportunity to have an observer present, EWVI shall notify the Administrator of the refilling of each Group 1 storage vessel that has been emptied and degassed.

(A) Except as provided in paragraphs (B) and (C) below, EWVI shall notify the Administrator in writing at least 30 calendar days prior to filling or refilling of each storage vessel with organic HAP's to afford the Administrator the opportunity to inspect the storage vessel prior to refilling.

(B) Except as provided in paragraph (C) below, if the internal inspection required by 40 C.F.R. §§ 63.120(a)(2), 63.120(a)(3), or 63.120(b)(10) of subpart G of this part is not planned and EWVI could not have known about the inspection 30 calendar days in advance of refilling the vessel with organic HAP's, the owner or operator shall notify the Administrator at least 7 calendar days prior to refilling of the storage vessel. Notification may be made by telephone and immediately followed by written documentation demonstrating why the inspection was unplanned. This notification, including the written documentation, may also be made in writing and sent so that it is received by the Administrator at least 7 calendar days prior to the refilling.

(C) The State or local permitting authority can waive the notification requirements of paragraphs (A) and/or (B) above for all or some storage vessels at petroleum refineries subject 40 C.F.R. Part 63 subpart CC. The State or local permitting authority may also grant permission to refill storage vessels sooner than 30 days after submitting the notification required by paragraph (A) above, or sooner than 7 days after submitting the notification required by paragraph (B) above for all storage vessels, or for individual storage vessels on a case-by-case basis.

[40 C.F.R. § 63.654(h)(2)(i) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.4.4.]

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the Schedule of Compliance Form as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4051	Emission unit name: TK-4051	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1996	Installation date: MM/DD/1996	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
1,260,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions

N/A

Recordkeeping:
To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.
$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.
[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

Reporting:
N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4052	Emission unit name: TK-4052	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; ethanol

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1972	Installation date: MM/DD/1972	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
30,240 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

- Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.8 – R13-2334M
- Applicable Requirement – 40 CFR 60
Limitations – Section 7.1.8
- Applicable Requirement – 45 CSR 16
Limitations – Section 7.1.8

Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

(i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or

(ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in

this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b(a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the

following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b(a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

(a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this

section will be kept for the life of the source.

(b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.

(c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.

(d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.

(e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.

(1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.

(2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:

(i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).

(ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.

(f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.

(1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.

(2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:

(i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(iii) As measured by an appropriate method as approved by the Administrator.

(g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

- (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
- (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than

10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.
 - (1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.
 - (2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:
 - (i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (iii) As measured by an appropriate method as approved by the Administrator.
- (g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Reporting:

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the Schedule of Compliance Form as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4054	Emission unit name: TK-4054	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products or kerosene

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1998	Installation date: MM/DD/1998	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
625,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input type="checkbox"/> Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.2, 7.1.8 – R13-2334M
Applicable Requirement – 40 CFR 60
Limitations – Section 7.1.8
Applicable Requirement – 45 CSR 16
Limitations – Section 7.1.8
Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 40 CFR 63
Limitations – N/A
Applicable Requirement – 45 CSR 34
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

- (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
- (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than

10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.
 - (1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.
 - (2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:
 - (i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (iii) As measured by an appropriate method as approved by the Administrator.
- (g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

Fixed roof; heavy products or kerosene

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1998	Installation date: MM/DD/1998	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
625,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If yes, is it? <input type="checkbox"/> Indirect Fired <input type="checkbox"/> Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.2 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:
N/A

Testing:
N/A

Recordkeeping:
To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.
[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.
$$\text{HAP Emissions (tpm or tpy)} = [(\text{Individual HAP \%}) \times (\text{Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy)})] / 100$$

Compliance with the yearly limit shall be based on a 12-month rolling total.
[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

Reporting:
N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

- (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
- (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than

10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.
 - (1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.
 - (2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:
 - (i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (iii) As measured by an appropriate method as approved by the Administrator.
- (g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

(i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or

(ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than 10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in

this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b(a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the

following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b(a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))]/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

(a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this

section will be kept for the life of the source.

(b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.

(c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.

(d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.

(e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.

(1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.

(2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:

(i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).

(ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.

(f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.

(1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.

(2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:

(i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or

(iii) As measured by an appropriate method as approved by the Administrator.

(g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Reporting:

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the **Schedule of Compliance Form** as **ATTACHMENT F**.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4060	Emission unit name: TK-4060	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Internal floating roof; crude; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
Construction date: MM/DD/1999	Installation date: MM/DD/1999	Modification date(s): N/A

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
5,040,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.8 – R13-2334M
Applicable Requirement – 40 CFR 60
Limitations – Section 7.1.8
Applicable Requirement – 45 CSR 16
Limitations – Section 7.1.8
Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 40 CFR 63
Limitations – N/A
Applicable Requirement – 45 CSR 34
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

- (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
- (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than

10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.
 - (1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.
 - (2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:
 - (i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (iii) As measured by an appropriate method as approved by the Administrator.
- (g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Reporting:

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the Schedule of Compliance Form as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4061	Emission unit name: TK-4061	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Internal floating roof; crude; mechanical shoe

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/2008	Installation date: MM/DD/2008	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
5,040,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or construction permit with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 13
Limitations – Sections 7.1.1, 7.1.8 – R13-2334M
Applicable Requirement – 40 CFR 60
Limitations – Section 7.1.8
Applicable Requirement – 45 CSR 16
Limitations – Section 7.1.8
Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 40 CFR 63
Limitations – N/A
Applicable Requirement – 45 CSR 34
Limitations – N/A

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

- (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
- (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than

10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.
 - (1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.
 - (2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:
 - (i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (iii) As measured by an appropriate method as approved by the Administrator.
- (g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall meet the requirements of paragraph (a), (b), or (c) of this section. The applicable paragraph for a particular storage vessel depends on the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b.

(a) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(1) (permanently affixed roof and internal floating roof), EWVI shall:

(1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, EWVI shall repair the items before filling the storage vessel.

(2) For Vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, EWVI shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator in the inspection report required in 40 C.F.R. § 60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions EWVI will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

(3) For vessels equipped with a double-seal system as specified in § 60.112b(a)(1)(ii)(B):

- (i) Visually inspect the vessel as specified in paragraph (a)(4) of this section at least every 5 years; or
- (ii) Visually inspect the vessel as specified in paragraph (a)(2) of this section.

(4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than

10 percent open area, EWVI shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with VOL. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years in the case of vessels conducting the annual visual inspection as specified in paragraphs (a)(2) and (a)(3)(ii) of this section and at intervals no greater than 5 years in the case of vessels specified in paragraph (a)(3)(i) of this section.

(5) Notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel for which an inspection is required by paragraphs (a)(1) and (a)(4) of this section to afford the Administrator the opportunity to have an observer present. If the inspection required by paragraph (a)(4) of this section is not planned and EWVI could not have known about the inspection 30 days in advance or refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(b) After installing the control equipment required to meet 40 C.F.R. § 60.112b(a)(2) (external floating roof), EWVI shall:

(1) Determine the gap areas and maximum gap widths, between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel according to the following frequency.

(i) Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with VOL and at least once every 5 years thereafter.

(ii) Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with VOL and at least once per year thereafter.

(iii) If any source ceases to store VOL for a period of 1 year or more, subsequent introduction of VOL into the vessel shall be considered an initial fill for the purposes of paragraphs (b)(1)(i) and (b)(1)(ii) of this section.

(2) Determine gap widths and areas in the primary and secondary seals individually by the following procedures:

(i) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports.

(ii) Measure seal gaps around the entire circumference of the tank in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each such location.

(iii) The total surface area of each gap described in paragraph (b)(2)(ii) of this section shall be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.

(3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each seal by the nominal diameter of the tank and compare each ratio to the respective standards in paragraph (b)(4) of this section.

(4) Make necessary repairs or empty the storage vessel within 45 days of identification in any inspection for seals not meeting the requirements listed in 40 C.F.R. § 60.113b(b)(4) (i) and (ii).

(5) Notify the Administrator 30 days in advance of any gap measurements required by paragraph (b)(1) of this section to afford the Administrator the opportunity to have an observer present.

(6) Visually inspect the external floating roof, the primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

(i) If the external floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before filling or refilling the storage vessel with VOL.

(ii) For all the inspections required by paragraph (b)(6) of this section, EWVI shall notify the Administrator in writing at least 30 days prior to the filling or refilling of each storage vessel to afford the Administrator the opportunity to inspect the storage vessel prior to refilling. If the inspection required by paragraph (b)(6) of this section is not planned and EWVI could not have known about the inspection 30 days in advance of refilling the tank, EWVI shall notify the Administrator at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Administrator at least 7 days prior to the refilling.

(c) For each source that is equipped with a closed vent system and control device as required in § 60.112b (a)(3) or (b)(2) (other than a flare), EWVI is exempt from § 60.8 of the General Provisions and shall meet the following requirements.

(1) Submit for approval by the Administrator as an attachment to the notification required by § 60.7(a)(1) or, if the facility is exempt from § 60.7(a)(1), as an attachment to the notification required by § 60.7(a)(2), an operating plan containing the information listed below.

(i) Documentation demonstrating that the control device will achieve the required control efficiency during maximum loading conditions. This documentation is to include a description of the gas stream which enters the control device, including flow and VOC content under varying liquid level conditions (dynamic and static) and manufacturer's design specifications for the control device. If the control device or the closed vent capture system receives vapors, gases, or liquids other than fuels from sources that are not designated sources under 40 C.F.R. Part 60 subpart K, the efficiency demonstration is to include consideration of all vapors, gases, and liquids received by the closed vent capture system and control device. If an enclosed combustion device with a minimum residence time of 0.75 seconds and a minimum temperature of 816 °C is used to meet the 95 percent requirement, documentation that those conditions will exist is sufficient to meet the requirements of this paragraph.

(ii) A description of the parameter or parameters to be monitored to ensure that the control device will be operated in conformance with its design and an explanation of the criteria used for selection of that parameter (or parameters).

(2) Operate the closed vent system and control device and monitor the parameters of the closed vent system and control device in accordance with the operating plan submitted to the Administrator in accordance with paragraph (c)(1) of this section, unless the plan was modified by the Administrator during the review process. In this case, the modified plan applies.

(d) For each source that is equipped with a closed vent system and a flare to meet the requirements in § 60.112b (a)(3) or (b)(2), EWVI shall meet the requirements as specified in the general control device requirements, § 60.18 (e) and (f).

[40 C.F.R. § 60.113b and 45CSR§16-2.1.; 45CSR13 - Permit R13-2334 - 7.2.6.]

Testing:

N/A

Recordkeeping:

To determine compliance with VOC emission limits, EWVI shall keep monthly records of throughput of each raw material/product for each tank. These records shall be kept individually, i.e. per tank. AP-42 emission factors for organic liquid storage tanks (Supp. D, Chapter 7.1), may be used to estimate yearly emissions.

[45CSR13 - Permit R13-2334 - 7.3.1.]

To determine compliance with short-term and annual HAP emission limits, EWVI shall estimate the emissions using a material balances calculation utilizing the vapor weight of HAPs present in petroleum liquids processed and transported at the facility. The following equation shall be used to determine monthly and yearly emissions.

HAP Emissions (tpm or tpy) = [(Individual HAP %) x (Actual VOC emissions, obtained using monthly throughput records and AP-42 emission factors (tpm or tpy))/100

Compliance with the yearly limit shall be based on a 12-month rolling total.

[45CSR13 - Permit R13-2334 - 7.3.2.; 45CSR§30-5.1.c.]

EWVI shall keep readily accessible records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel for Group 1 or Group 2 storage vessels. This record shall be kept as long as the storage vessel retains Group 1 or Group 2 status and is in operation. For each Group 2 storage vessel, the owner or operator is not required to comply with any other provisions of 40 C.F.R. §§ 63.119 through 63.123 other than those required by this paragraph unless such vessel is part of an emissions average as described in 40 C.F.R. § 63.150.

[40 C.F.R. § 63.123(a) and 45CSR§34-2.1.; 45CSR13 - Permit R13-2334 - 7.3.3.]

For each storage vessel as specified in 40 C.F.R. § 60.112b(a), EWVI shall keep records and furnish reports as required by 40 C.F.R. § 60.115b paragraphs (a), (b), or (c) depending upon the control equipment installed to meet the requirements of 40 C.F.R. § 60.112b. EWVI shall keep copies of all reports and records required by this section, except for the record required by 40 C.F.R. § 60.115b(c)(1), for at least 2 years. The record required by 40 C.F.R. § 60.115b (c)(1) will be kept for the life of the control equipment.

[40 C.F.R. § 60.115b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.8.]

The following requirements apply:

- (a) EWVI shall keep copies of all records required by 40 C.F.R. Part 60 Subpart Kb, except for the record required by paragraph (b) of this section, for at least 2 years. The record required by paragraph (b) of this section will be kept for the life of the source.
- (b) For each storage vessel as specified in 40 C.F.R. § 60.110b(a), EWVI shall keep readily accessible records showing the dimension and an analysis showing the capacity of the storage vessel.
- (c) Except as provided in paragraphs (f) and (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 3.5 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure greater than or equal to 15.0 kPa, EWVI shall maintain a record of the VOL stored, the period of storage, and the maximum true vapor pressure of that VOL during the respective storage period.
- (d) Except as provided in paragraph (g) of this section, for each storage vessel either with a design capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 5.2 kPa or with a design capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure that is normally less than 27.6 kPa, EWVI shall notify the Administrator within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure values for each volume range.
- (e) Available data on the storage temperature may be used to determine the maximum true vapor pressure as determined below.
 - (1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
 - (2) For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
 - (i) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by reference -- see § 60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).
 - (ii) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
- (f) For each vessel storing a waste mixture of indeterminate or variable composition, EWVI shall be subject to the following requirements.
 - (1) Prior to the initial filling of the vessel, the highest maximum true vapor pressure for the range of anticipated liquid compositions to be stored will be determined using the methods described in paragraph (e) of this section.
 - (2) For vessels in which the vapor pressure of the anticipated liquid composition is above the cutoff for monitoring but below the cutoff for controls as defined in 40 C.F.R. §60.112b(a), an initial physical test of the vapor pressure is required; and a physical test at least once every 6 months thereafter is required as determined by the following methods:
 - (i) ASTM D2879-83, 96, or 97 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (ii) ASTM D323-82 or 94 (incorporated by reference -- see 40 C.F.R. § 60.17); or
 - (iii) As measured by an appropriate method as approved by the Administrator.
- (g) For each vessel equipped with a closed vent system and control device meeting the specification of 40 C.F.R. § 60.112b or with emissions reductions equipment as specified in 40 CFR 65.42(b)(4), (b)(5), (b)(6), or (c), EWVI is exempt from the requirements of paragraphs (c) and (d) of this section.

[40 C.F.R. § 60.116b and 45CSR§16-2.1; 45CSR13 - Permit R13-2334 - 7.3.9.]

Reporting:

N/A

Are you in compliance with all applicable requirements for this emission unit? Yes No

If no, complete the Schedule of Compliance Form as ATTACHMENT F.

ATTACHMENT E - Emission Unit Form

Emission Unit Description

Emission unit ID number: 4103	Emission unit name: TK-4103	List any control devices associated with this emission unit: N/A
---	---------------------------------------	--

Provide a description of the emission unit (type, method of operation, design parameters, etc.):
Fixed roof; heavy products

Manufacturer: N/A	Model number: N/A	Serial number: N/A
-----------------------------	-----------------------------	------------------------------

Construction date: MM/DD/1970	Installation date: MM/DD/1970	Modification date(s): N/A
---	---	-------------------------------------

Design Capacity (examples: furnaces - tons/hr, tanks - gallons):
127,000 gallons

Maximum Hourly Throughput: See Section 2.0	Maximum Annual Throughput: See Section 2.0	Maximum Operating Schedule: 8,760 hr/yr
--	--	---

Fuel Usage Data (fill out all applicable fields)

Does this emission unit combust fuel? ___Yes ___X___ No	If yes, is it? ___ Indirect Fired ___ Direct Fired
--	--

Maximum design heat input and/or maximum horsepower rating: N/A	Type and Btu/hr rating of burners: N/A
---	--

List the primary fuel type(s) and if applicable, the secondary fuel type(s). For each fuel type listed, provide the maximum hourly and annual fuel usage for each.
N/A

Describe each fuel expected to be used during the term of the permit.

Fuel Type	Max. Sulfur Content	Max. Ash Content	BTU Value
N/A	N/A	N/A	N/A

Emissions Data See Section 2.0		
Criteria Pollutants	Potential Emissions	
	PPH	TPY
Carbon Monoxide (CO)		
Nitrogen Oxides (NO _x)		
Lead (Pb)		
Particulate Matter (PM _{2.5})		
Particulate Matter (PM ₁₀)		
Total Particulate Matter (TSP)		
Sulfur Dioxide (SO ₂)		
Volatile Organic Compounds (VOC)		
Hazardous Air Pollutants	Potential Emissions	
	PPH	TPY
Regulated Pollutants other than Criteria and HAP	Potential Emissions	
	PPH	TPY

List the method(s) used to calculate the potential emissions (include dates of any stack tests conducted, versions of software used, source and dates of emission factors, etc.).

See Section 2.0

Applicable Requirements

List all applicable requirements for this emission unit. For each applicable requirement, include the underlying rule/regulation citation and/or **construction permit** with the condition number. (Note: Title V permit condition numbers alone are not the underlying applicable requirements). If an emission limit is calculated based on the type of source and design capacity or if a standard is based on a design parameter, this information should also be included.

Applicable Requirement – 45 CSR 30
Limitations – N/A
Applicable Requirement – 45 CSR 13
Limitations – Section 7.1.1 – R13-2334M

Permit Shield

For all applicable requirements listed above, provide monitoring/testing/recordkeeping/reporting which shall be used to demonstrate compliance. If the method is based on a permit or rule, include the condition number or citation. (Note: Each requirement listed above must have an associated method of demonstrating compliance. If there is not already a required method in place, then a method must be proposed.)

Monitoring:
N/A

Testing:

<input type="checkbox"/> Carbon Bed Adsorber	<input type="checkbox"/> Packed Tower Scrubber	<input type="checkbox"/> Single Cyclone
<input type="checkbox"/> Carbon Drum(s)	<input type="checkbox"/> Other Wet Scrubber	<input type="checkbox"/> Cyclone Bank
<input type="checkbox"/> Catalytic Incinerator	<input type="checkbox"/> Condenser	<input type="checkbox"/> Settling Chamber
<input type="checkbox"/> Thermal Incinerator	<input checked="" type="checkbox"/> Flare	<input type="checkbox"/> Other (describe) _____
<input type="checkbox"/> Wet Plate Electrostatic Precipitator		<input type="checkbox"/> Dry Plate Electrostatic Precipitator

List the pollutants for which this device is intended to control and the capture and control efficiencies.

Pollutant	Capture Efficiency	Control Efficiency
VOC	N/A	95%

Explain the characteristic design parameters of this control device (flow rates, pressure drops, number of bags, size, temperatures, etc.).

N/A

Is this device subject to the CAM requirements of 40 C.F.R. 64? Yes No

If Yes, **Complete ATTACHMENT H**

If No, **Provide justification.**

F1 is not subject to the CAM requirements of 40 CFR 64 due to the fact that the flare is used for upsets, and EWVI uses flare gas recovery.

Describe the parameters monitored and/or methods used to indicate performance of this control device.

The 'Pilot on' indicator is used to indicate performance of this unit.

Temperature = 1,000°F

Is this device subject to the CAM requirements of 40 C.F.R. 64? ___ Yes ___X___ No

If Yes, **Complete ATTACHMENT H**

If No, **Provide justification.**

Non-applicability of CAM Rules EWVI to the EWVI Refinery

Compliance Assurance Monitoring (CAM) potentially applies on a Pollutant Specific Emission Unit (PSEU) basis at emission units located at a major source for purposes of Title V permitting. CAM rules codified in 40 CFR Part 64 apply if:

- 1) The PSEU is subject to an emission limit or standard
- 2) The PSEU uses an add-on control device to achieve compliance with the emission limitation or standard
- 3) The PSEU has pre-control emissions greater than the Title V major source thresholds for the applicable pollutant
- 4) The PSEU is not an exempt back-up utility power emissions unit that is municipally owned

At the EWVI refinery, the only emission unit that potentially meets the requirements above includes the loading rack that is controlled using the thermal oxidizer.

The emission limitation that the loading rack and the thermal oxidizer are subject to is 40 CFR Part 63 Subpart CC and 40 CFR Part 63 Subpart R. Both these Part 63 subparts were promulgated after 11/15/1990. 40 CFR Part 64(b)(1)(i) exempts "Emission limitations or standards proposed by the Administrator after November 15, 1990 pursuant to section 111 or 112 of the Act." Section 111 and 112 refer to 40 CFR Part 60, 61 and 63. Therefore, CAM does not apply to the loading rack and the associated thermal oxidizer.

Describe the parameters monitored and/or methods used to indicate performance of this control device.

Temperature is used to indicate performance of this unit.

ATTACHMENT G - Air Pollution Control Device Form

Control device ID number: 00A-03	List all emission units associated with this control device. WWT

Manufacturer: Chem-Trade International, Inc.	Model number: DVM-8	Installation date: 02/2002
--	-------------------------------	--------------------------------------

Type of Air Pollution Control Device:

<input type="checkbox"/> Baghouse/Fabric Filter	<input type="checkbox"/> Venturi Scrubber	<input type="checkbox"/> Multiclone
<input checked="" type="checkbox"/> Carbon Bed Adsorber	<input type="checkbox"/> Packed Tower Scrubber	<input type="checkbox"/> Single Cyclone
<input type="checkbox"/> Carbon Drum(s)	<input type="checkbox"/> Other Wet Scrubber	<input type="checkbox"/> Cyclone Bank
<input type="checkbox"/> Catalytic Incinerator	<input type="checkbox"/> Condenser	<input type="checkbox"/> Settling Chamber
<input type="checkbox"/> Thermal Incinerator	<input type="checkbox"/> Flare	<input type="checkbox"/> Other (describe) _____
<input type="checkbox"/> Wet Plate Electrostatic Precipitator	<input type="checkbox"/> Dry Plate Electrostatic Precipitator	

List the pollutants for which this device is intended to control and the capture and control efficiencies.

Pollutant	Capture Efficiency	Control Efficiency
VOC	95-99%	95-99%

Explain the characteristic design parameters of this control device (flow rates, pressure drops, number of bags, size, temperatures, etc.).

This control device consist of two identical carbon units each containing 7,700 lbs of granular activated carbon (CT 410 GAC). Maximum design flow rate is 6,000 cfm. A single unit is operated while the other remains in standby mode until the first unit breaks through.

Is this device subject to the CAM requirements of 40 C.F.R. 64? Yes No

If Yes, **Complete ATTACHMENT H**

If No, **Provide justification.**

This unit is not subject to the CAM requirements of 40 CFR 64 due to the fact that the pre-control emissions are less than the Title V threshold for major sources.

Describe the parameters monitored and/or methods used to indicate performance of this control device.

Outlet gas is monitored using an MSA VOC analyzer Model No. A-3800-111-0000-DAN-1. A performance test was conducted to document removal efficiency.

ATTACHMENT H – CAM PLAN FORMS

ATTACHMENT H – CAM PLAN FORMS

None of the emission units at EWVI are subject to CAM. See Attachment G for complete discussion of non-applicability.

ATTACHMENT H - Compliance Assurance Monitoring (CAM) Plan Form

For definitions and information about the CAM rule, please refer to 40 CFR Part 64. Additional information (including guidance documents) may also be found at <http://www.epa.gov/ttn/emc/cam.html>

CAM APPLICABILITY DETERMINATION

1) Does the facility have a PSEU (Pollutant-Specific Emissions Unit considered separately with respect to **EACH** regulated air pollutant) that is subject to CAM (40 CFR Part 64), which must be addressed in this CAM plan submittal? To determine applicability, a PSEU must meet **all** of the following criteria (*If No, then the remainder of this form need not be completed*): YES NO

- a. The PSEU is located at a major source that is required to obtain a Title V permit;
- b. The PSEU is subject to an emission limitation or standard for the applicable regulated air pollutant that is **NOT** exempt;

LIST OF EXEMPT EMISSION LIMITATIONS OR STANDARDS:

- NSPS (40 CFR Part 60) or NESHAP (40 CFR Parts 61 and 63) proposed after 11/15/1990.
 - Stratospheric Ozone Protection Requirements.
 - Acid Rain Program Requirements.
 - Emission Limitations or Standards for which a WVDEP Division of Air Quality Title V permit specifies a continuous compliance determination method, as defined in 40 CFR §64.1.
 - An emission cap that meets the requirements specified in 40 CFR §70.4(b)(12).
- c. The PSEU uses an add-on control device (as defined in 40 CFR §64.1) to achieve compliance with an emission limitation or standard;
 - d. The PSEU has potential pre-control device emissions of the applicable regulated air pollutant that are equal to or greater than the Title V Major Source Threshold Levels; AND
 - e. The PSEU is **NOT** an exempt backup utility power emissions unit that is municipally-owned.

BASIS OF CAM SUBMITTAL

2) Mark the appropriate box below as to why this CAM plan is being submitted as part of an application for a Title V permit:

RENEWAL APPLICATION. **ALL** PSEUs for which a CAM plan has **NOT** yet been approved need to be addressed in this CAM plan submittal.

INITIAL APPLICATION (submitted after 4/20/98). **ONLY** large PSEUs (i. e., PSEUs with potential post-control device emissions of an applicable regulated air pollutant that are equal to or greater than Major Source Threshold Levels) need to be addressed in this CAM plan submittal.

SIGNIFICANT MODIFICATION TO LARGE PSEUs. **ONLY** large PSEUs being modified after 4/20/98 need to be addressed in this cam plan submittal. For large PSEUs with an approved CAM plan, **Only** address the appropriate monitoring requirements affected by the significant modification.

3) ^a BACKGROUND DATA AND INFORMATION

Complete the following table for all PSEUs that need to be addressed in this CAM plan submittal. This section is to be used to provide background data and information for each PSEU in order to supplement the submittal requirements specified in 40 CFR §64.4. If additional space is needed, attach and label accordingly.

PSEU DESIGNATION	DESCRIPTION	POLLUTANT	CONTROL DEVICE	^b EMISSION LIMITATION or STANDARD	^c MONITORING REQUIREMENT
<u>EXAMPLE</u> Boiler No. 1	Wood-Fired Boiler	PM	Multiclone	45CSR§2-4.1.c.; 9.0 lb/hr	Monitor pressure drop across multiclone: Weekly inspection of multiclone

^a If a control device is common to more than one PSEU, one monitoring plan may be submitted for the control device with the affected PSEUs identified and any conditions that must be maintained or monitored in accordance with 40 CFR §64.3(a). If a single PSEU is controlled by more than one control device similar in design and operation, one monitoring plan for the applicable control devices may be submitted with the applicable control devices identified and any conditions that must be maintained or monitored in accordance with 40 CFR §64.3(a).

^b Indicate the emission limitation or standard for any applicable requirement that constitutes an emission limitation, emission standard, or standard of performance (as defined in 40 CFR §64.1).

^c Indicate the monitoring requirements for the PSEU that are required by an applicable regulation or permit condition.

CAM MONITORING APPROACH CRITERIA

Complete this section for **EACH** PSEU that needs to be addressed in this CAM plan submittal. This section may be copied as needed for each PSEU. This section is to be used to provide monitoring data and information for **EACH** indicator selected for **EACH** PSEU in order to meet the monitoring design criteria specified in 40 CFR §64.3 and §64.4. If more than two indicators are being selected for a PSEU or if additional space is needed, attach and label accordingly with the appropriate PSEU designation, pollutant, and indicator numbers.

4a) PSEU Designation:	4b) Pollutant:	4c) ^a Indicator No. 1:	4d) ^a Indicator No. 2:
5a) GENERAL CRITERIA Describe the <u>MONITORING APPROACH</u> used to measure the indicators:			
^b Establish the appropriate <u>INDICATOR RANGE</u> or the procedures for establishing the indicator range which provides a reasonable assurance of compliance:			
5b) PERFORMANCE CRITERIA Provide the <u>SPECIFICATIONS FOR OBTAINING REPRESENTATIVE DATA</u> , such as detector location, installation specifications, and minimum acceptable accuracy:			
^c For new or modified monitoring equipment, provide <u>VERIFICATION PROCEDURES</u> , including manufacturer's recommendations, <u>TO CONFIRM THE OPERATIONAL STATUS</u> of the monitoring:			
Provide <u>QUALITY ASSURANCE AND QUALITY CONTROL (QA/QC) PRACTICES</u> that are adequate to ensure the continuing validity of the data, (i.e., daily calibrations, visual inspections, routine maintenance, RATA, etc.):			
^d Provide the <u>MONITORING FREQUENCY</u> :			
Provide the <u>DATA COLLECTION PROCEDURES</u> that will be used:			
Provide the <u>DATA AVERAGING PERIOD</u> for the purpose of determining whether an excursion or exceedance has occurred:			

^a Describe all indicators to be monitored which satisfies 40 CFR §64.3(a). Indicators of emission control performance for the control device and associated capture system may include measured or predicted emissions (including visible emissions or opacity), process and control device operating parameters that affect control device (and capture system) efficiency or emission rates, or recorded findings of inspection and maintenance activities.

^b Indicator Ranges may be based on a single maximum or minimum value or at multiple levels that are relevant to distinctly different operating conditions, expressed as a function of process variables, expressed as maintaining the applicable indicator in a particular operational status or designated condition, or established as interdependent between more than one indicator. For CEMS, COMS, or PEMS, include the most recent certification test for the monitor.

^c The verification for operational status should include procedures for installation, calibration, and operation of the monitoring equipment, conducted in accordance with the manufacturer's recommendations, necessary to confirm the monitoring equipment is operational prior to the commencement of the required monitoring.

^d Emission units with post-control PTE ≥ 100 percent of the amount classifying the source as a major source (i.e., Large PSEU) must collect four or more values per hour to be averaged. A reduced data collection frequency may be approved in limited circumstances. Other emission units must collect data at least once per 24 hour period.

RATIONALE AND JUSTIFICATION

Complete this section for EACH PSEU that needs to be addressed in this CAM plan submittal. This section may be copied as needed for each PSEU. This section is to be used to provide rationale and justification for the selection of EACH indicator and monitoring approach and EACH indicator range in order to meet the submittal requirements specified in 40 CFR §64.4.

6a) PSEU Designation:

6b) Regulated Air Pollutant:

7) **INDICATORS AND THE MONITORING APPROACH:** Provide the rationale and justification for the selection of the indicators and the monitoring approach used to measure the indicators. Also provide any data supporting the rationale and justification. Explain the reasons for any differences between the verification of operational status or the quality assurance and control practices proposed, and the manufacturer's recommendations. (If additional space is needed, attach and label accordingly with the appropriate PSEU designation and pollutant):

8) **INDICATOR RANGES:** Provide the rationale and justification for the selection of the indicator ranges. The rationale and justification shall indicate how EACH indicator range was selected by either a COMPLIANCE OR PERFORMANCE TEST, a TEST PLAN AND SCHEDULE, or by ENGINEERING ASSESSMENTS. Depending on which method is being used for each indicator range, include the specific information required below for that specific indicator range. (If additional space is needed, attach and label accordingly with the appropriate PSEU designation and pollutant):

- COMPLIANCE OR PERFORMANCE TEST (Indicator ranges determined from control device operating parameter data obtained during a compliance or performance test conducted under regulatory specified conditions or under conditions representative of maximum potential emissions under anticipated operating conditions. Such data may be supplemented by engineering assessments and manufacturer's recommendations). The rationale and justification shall INCLUDE a summary of the compliance or performance test results that were used to determine the indicator range, and documentation indicating that no changes have taken place that could result in a significant change in the control system performance or the selected indicator ranges since the compliance or performance test was conducted.
- TEST PLAN AND SCHEDULE (Indicator ranges will be determined from a proposed implementation plan and schedule for installing, testing, and performing any other appropriate activities prior to use of the monitoring). The rationale and justification shall INCLUDE the proposed implementation plan and schedule that will provide for use of the monitoring as expeditiously as practicable after approval of this CAM plan, except that in no case shall the schedule for completing installation and beginning operation of the monitoring exceed 180 days after approval.
- ENGINEERING ASSESSMENTS (Indicator Ranges or the procedures for establishing indicator ranges are determined from engineering assessments and other data, such as manufacturers' design criteria and historical monitoring data, because factors specific to the type of monitoring, control device, or PSEU make compliance or performance testing unnecessary). The rationale and justification shall INCLUDE documentation demonstrating that compliance testing is not required to establish the indicator range.

RATIONALE AND JUSTIFICATION:
